

I have to say thank you for LE1 to start this thread, and all other traders who teach us. Pat, Tor, Gibril, Assange, and so on..... Me and my wife are not new to forex, but we learned a lot from you guys. please keep up that good work, and one day I hope we can teach the others.

Another sniper shot on EJ. 12 pips. thx imi

I'm not an expert but check the picture.it is my opinion.

my trade today on au. comments welcome.

today ranging market so I tried on EU M5. easy 20 pips

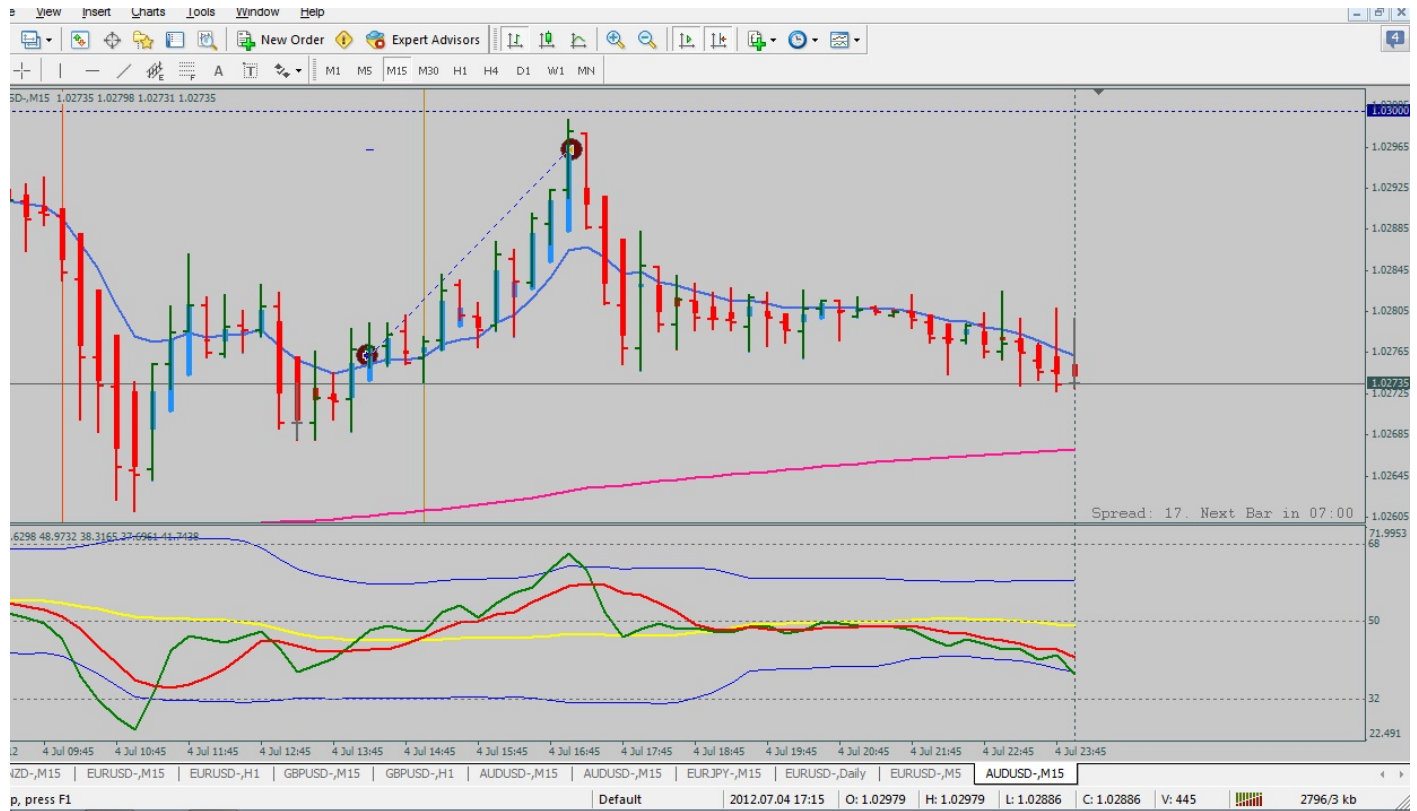

clear setup on au. I didn't take it because I was watching eu.

My trade today on AU

It was a clear setup for 10-20 pips

thx imi

My E/J short

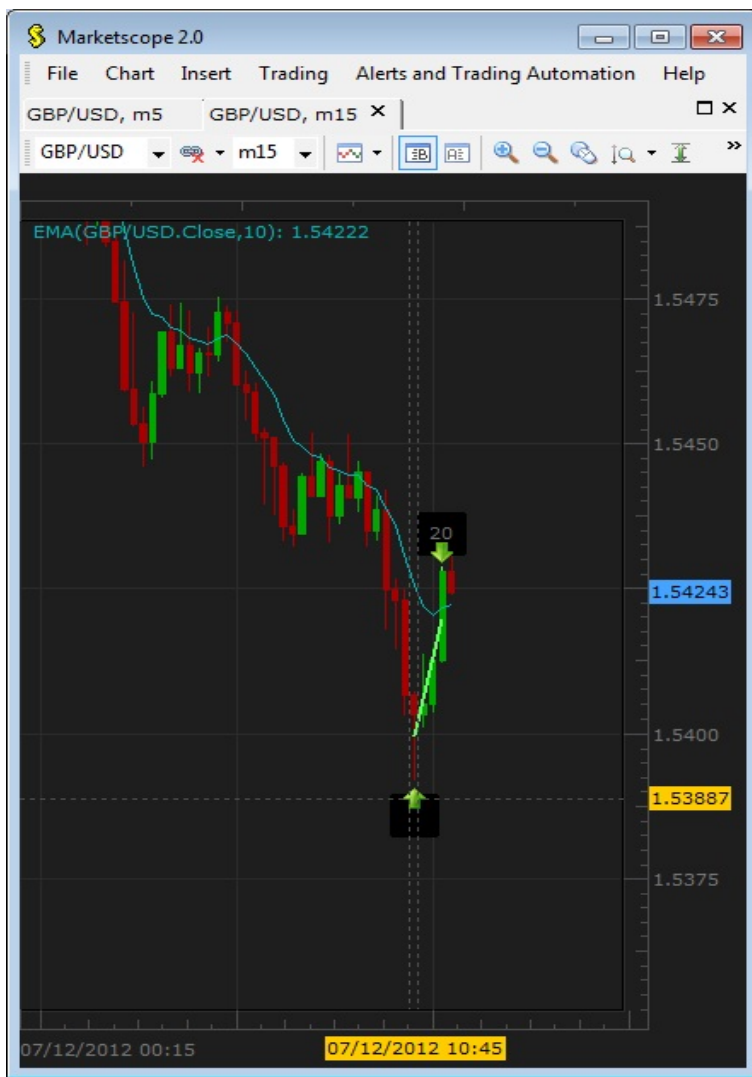

my NY session g/u short trade

my CT on G/U 20 pips

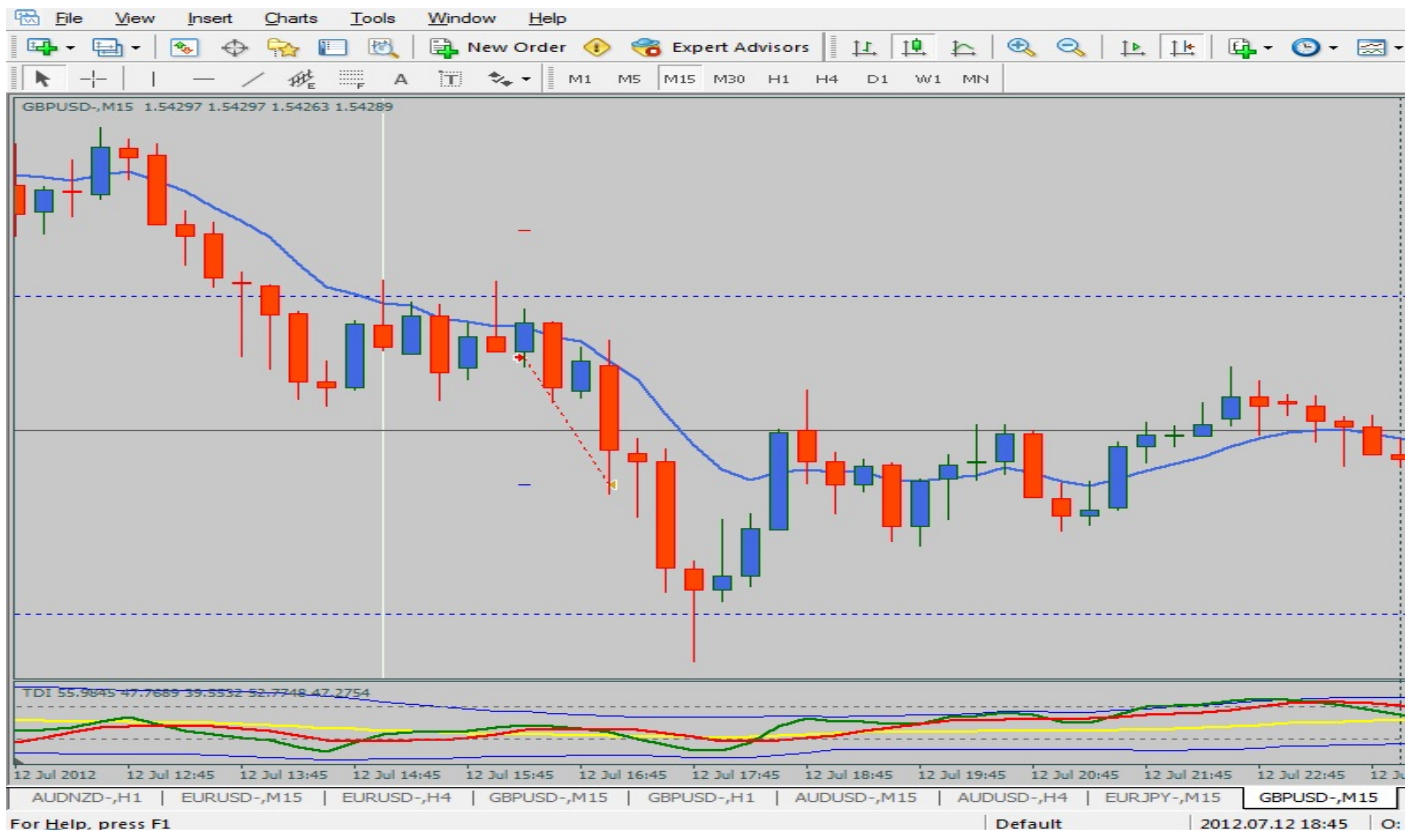

CT on U/Cad

here is my post again

I was a bit late because I should've sold when price

retraced back to 10 EMA. I hope now you can see arrows on my chart. it was a CT for me because, the pin on RN and price. 90 pips from 200 EMA. g/u reached daily ADR /average daily range

here is my trade on G/U in NY session,

quick 20 pips on a/u long

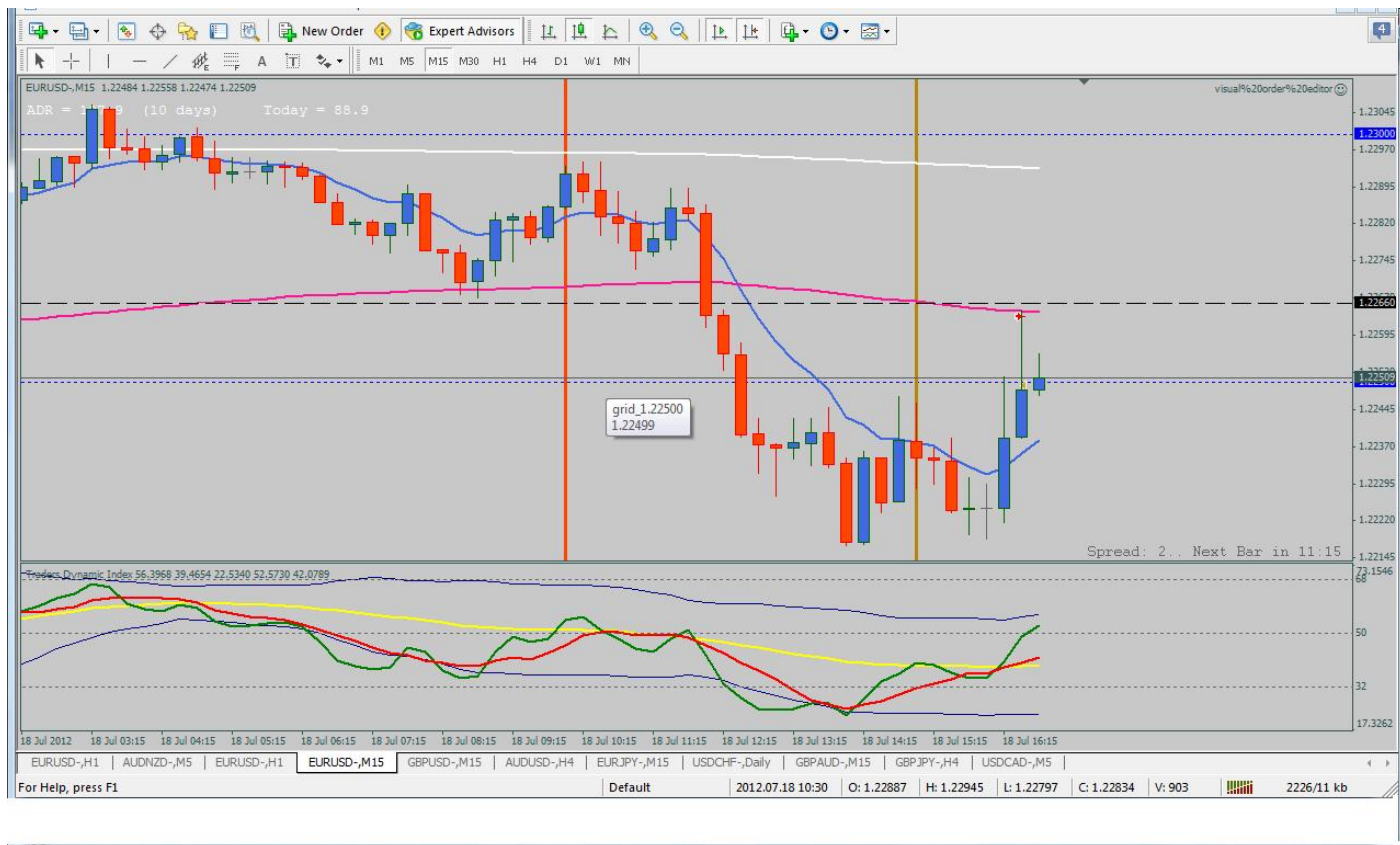

one of my trades in US session.
chart #1 AU H4, chary #2 AU 15M

my wifes eu short today

The power of the 10 EMA touch on H4. the second chart show it on M1

g/u long +20

today EU CT on 15M + 20 pips, It was a touch of the daily 10 EMA. guys I learned it all from this thread. I have read every post at least 3 times.

another nice one, happened in London. trend trade, no sweat.

EU short +20

break and bounce off 200 EMA confirm from H4 pin

CT on EU

Folks, please read, it's all in here!

A/U , G/U CT trades +40 pips This is what I have learned from you, my friend! You already shown the reasons on H4 charts.

G/U short +20 aussie had the same kind of setup, but it was the second touch there. So I went with the pound.

I'm in G/U short @ the touch of 200 EMA on daily, above RN closed for + 17 pips

A/U short

H4 double top , RN. shorted, got + 20

E/U short stopped out @ BE

I have to lose this mentality holding it for 20. While I was posting the aussie chart, got stopped out at BE. It was in + 16

G/U

Anybody caught this? It was a touch on the weekly 10 ema, easy pips, unfortunately I was sleeping .

E/U long scalp +12 I went long @ the touch of the daily 10 ema for quick pips.

G/U let's see?

E/U long +14 Nice trend trade , quick pips, good morning ! It happened the minute I opened my computer!

G/U CT

Daily 10 ema touch on M15 800 ema +17 + 7

Hi all! First trade EU. Early morning for me. Entered with 1/3 of my usual lot size. Closed for -11 pips. Second AU, CT normal lot size + 10 pips. Third trade G/U . BE. I had it in + 20 pips, but my target was just above next RN, where I was going to buy it. Stopped out at break even.

G/U short Took out partial profit of 13.5 pips rest at BE target above RN

I closed the rest for 18.4 pips news is coming up

A/U short +20 pips

I didn't bother to get up early today, because of all the news events. I saw this opportunity, and entered. It was a retrace back to the 10 ema on 4h chart. I should've added @ RN, but I wasn't too confident because of the large candles. It worked.

E/U short in Asia session

First picture is H4. After the price hit the weekly 10 ema, I saw this pullback bar on H4. I was expecting price to retrace back to the H4 200 EMA. I entered the trade , set my SL, and TP just above the 200 ema, and went to bed. I woke up and found my tp of 42 pips was hit. Second picture is M15.

G/U short +20 pips

I lost my patience in this bull bear fight.

A/U BE. E/U + 10.5 G/U + 12

G/U short +20

same time, same trade like yesterday except for the adr.

E/U I so wish I could be trading in the London session. Perfect sell opp., just under RN. I dream about trades like this LOL.

G/U

Just missed this one by the spread

G/U CT +16 +11

anyway, I made a reminder for myself " SEE THE TREND" and stick it on my screen. Counter trends are great and I tend to see them more often. I want to divide my brain to see both, and feel the balance , because trend trades pay bigger pips.

Classic LE1 setup

First picture G/U, second is A/U. He does this all the time. See how the 10 ema is getting close to the 800. Than, look how it crosses it, wait for the pin or doji and bang. Bulls eye shot. I see these in my dreams(I am sleeping at FO and LO)

G/U and again...

Arjun has taught us that ema's act like dynamic support/resistance.

Therefore price most often will bounce on these levels. Specially watch out for the first touch. When price approaches these levels I go down to the lower timeframe like M1 and look for confirmation (pinbar, doji, HL, or HH, close above 10ema) and enter. In that G/U trade you ask about, I was very confident that price will bounce. Daily 10ema was there and also just 7 pips lower H4 200 ema.

To me it was very strong and I was confident about it. I went down to lower timeframe and you know the rest. The only thing is, I should've added one more here.

E/U 1., Daily , third touch on trendline at RN. 2., M15

I didn't plan to trade today, but just saw this while I was posting. got in a little late, but was good for a few pips.

G/U mini scalp +9

@RN, and yesterday's high

E/U long +20 , G/U long +16

My bias was long today, and I was waiting for the trigger.

A/U long +20

Not the nicest looking trade, and what I am saying on the chart was right at news time.

even better entry in the flying candle breaking previous candle's high.

Like Arjun has explained it, it bounced a little on the 200, than it made an even smaller bounce, that's how he knows it's gonna break it. Nice one, congrats.

E/CAD @ LO Look at that. ADR, RN, and Daily 10 ema.

E/U CT +16.5 + 7. I only traded 20% of my normal lot size.

classic E/U

Price is above both 200 and 800 ema, it breaks out of the small range, retrace back to 10 ema, tdi confirms. It doesn't get any better than that. Unfortunately, I don't live in London time zone

E/Y CT +11

took 11 here, and re-entered short again @ RN

E/Y CT trades +11+20+20+20

eur/yen ADR reached, RN. First chart is M15, the second is H1 showing with the arrows why I hold on to the trade.

A/U short +10

Black arrow would've been the first perfect entry.

IMO this H1 candle is bad news for short at the moment

look at it going now E/U

E/U CT +13

First chart is M5 with entry. Second chart is H1, arrow showing reason.

E/U scalp +10 E/U scalp @ RN, entry on M1.

BTW, it was a pure beauty. That was first touch of 200 on H1. On M15 everything was there RN, Daily 10.

E/Y First chart H1 , it was first touch of 200 ema. Second is M15, I entered there, @ RN , Daily 10 ema.

G/U CT +20

e/y I was busy replying to xman when this happened, but that's the place where I would've entered again.

the only trade I took today, I don't wanna stretch it at the the end of the month, at yesterday's high (btw, anyone knows why I can't change the color, so I can see it?) It's going nowhere, I'll close it. Just wanted to try out greenshot

Top Down analysis G/U

Start at daily chart. Make your analysis. Look for entries on LTF. My first entry on m15 was at H1 10 ema. The rest at H4 and monthly 10 ema. I took profit at yesterday's high.

New York is closed today. Very quiet. This is GBP/AUD H1. ADR, RN, Divergence

E/U scalp

First chart is M15, bounce off 50%fib, and yesterday's low. My initial tp was at the 10ema and missed it by 0.3. I closed it at the second run for +10, before the news. Second chart shows same trade on M5. Nothing special, kids back to school today, see you later

I would've taken this in the London session. Hanging on yesterday's high, tp at 200ema. Easy setup for the London traders.

E/U

NY session battlefield. Big fight. IMO, it's better to stay away. if you don't want to walk away with a black eye. Lol

G/A CT trades

20+20 pips

E/U CT

I missed my tp, so I closed it in +7

G/U CT

+9 on this one

G/A CT trade +14, on the third G/A trade

reason ADR, and I saw a pinbar closed on H4, waited for price to retrace to about 50% of the pin, back to the adr line. I also looked at g/u and a/u to confirm it. first chart m15, second H4

I'm pretty much sitting on the sidelines today. Nice PA, lots of news. There was an adr reach on a/u chart a/u m5. now I can't really concentrate in the first hour of NY, as the kids are getting ready for school, I'll wait for them to leave

A diagram showing a vertical beam. A green line represents the beam's axis. A red arrow points downwards from the top of the beam, representing an applied force. A red arrow points upwards from the bottom of the beam, representing a reaction force. The beam is shown in a blue cross-section.

Yesterdays High

4HR 10 EMA

M5

Spread: 7 Next Bar in 04:46

It happened very late in the session, but I felt confident about this setup. It was at RN, Daily 200ema, and Daily 10 ema. I entered and left for a walk. First chart is H1, second is M1 that's where I entered.

E/U wow, I just got online 5 min. Ago. my daily chart shows 200e at 1.2850

My G/U trades today

I didn't do any eu trade today, it was ranging in most of the Ny session. First trade on g/u was a bounce off the 200ema, but I didn't expect it to produce too many pips, because the H4, had a big red bar closed which was a LH. I was expecting some retracement and was waiting for a sell opportunity. So, I closed for +4. First sell was entered on M5, and the second on M15. It wasn't the best day for me , but it is what it is.

G/A +20

Only one trade today for me. First chart is H4, showing the reversal candle pattern, that I have observed many times and confident about. Second is H1, I entered the trade on H1. You see after the first pin price was coming down and when it turned around and turned back blue I entered, before the candle closed. Third is M15, just to show it didn't go a pip against me, but I wasn't looking m15 at that time, I made the entry on H1.

E/Y M15 also, look at how 10 ema crosses the 200e

A/U H1

third touch of the trendline, with divergence. I'm not trading , I did one trade earlier, and it's friday

A/U M15 +20 This is my earlier trade, reason : adr, RN, weekly trendline

E/Y CT +20

back to the habit... while waiting on the pound, I took quick 20 pips on eur/yen. Once again I made the entry on H1. I'm posting both H1 and m15.

E/Y M15

adr has been reached, nice slope, enter right at that candle, daily tf candle, just had to wait for it

G/U +20 H1 entry

first check was H4, it hasn't been making HH, 10 ema is rolling in first candle closed below 10ema, entered on H1, it was fast. nice PA today

E/U +20

Clear momentum on H1. Waited for some retrace on m15. Pay attention to the double top, and LH on H1.

G/U CT

adr, RN bounce +17+13+12+13 charts H1, M5 entries

A/U +7

trigger chart M15 entry on M1

E/Y H4 +50 Asia session

This is EJ.... Follow the trend....always....this entries are for someone who has been trading for a while...if you are new...dont attempt these entries...I was looking at the daily on e/y as well. I also was expecting it to drop today, but it made a 50 pips retrace first , which I took advantage of. Entry was made on H4 with 35 pips SL and 50 pips TP was hit. Made entry before I went to bed, and woke up to tp.

this is what I meant, g/u closed the h4 with a big bearish bar, plus the adr was reached in that h4 candle. check out m15 it retraced back to h4 10ema almost to the pip.

mine was a bit early, but was good for 20pips

Pattern I am a bad drawer, sorry. I don't know what that pattern called (M & W?) I see it a lot, and know what to do when I see them.

E/U +20

Late in US session, slow market, CT trade on eu m15, adr had already been reached for the day, tp 20pips was hit.

E/U m5

this is what you guys get in the london session. You don't even need to think. you can bet your house on this , lol

G/U + 20 NY session

ok,ok, I stop complaining. I got my 20 pips in the second round. Entry on m5, after the 4hr candle closed. check out how it closed

E/U M5

this is how I see it. Since Arjun showed me how to do it. We already got the level, sell every retracement.

h4 candle

thanks for your advice. this is MY candle, the one I love and trust. gmt+3

G/U M5 +20 why am I doing this? Because, I got the level, and selling every retracement.

A/U +20 I picked up a cold or flu from my kids. brrr... I peeked in the NY session for a bit, didn't see much movement. I entered one trade and went back to bed, pretty much spent the whole day in bed sleeping. A/U H4, third touch of the trendline with red arrow, candle closed above it, and also RN, 200 ema. entered on M15. Not the best looking entry , but it was good for +20.

I believe, this is very important, and worth to be reminded everyone. Thank you goochie for bringing Arjun's image up

This is very safe...right from the day one..if you see most of my trades are taken around the RN...95% of the trades were taken away and 5% towards if there is a good momentum...you need to practice your eyes to see 2 things....one are they buying or selling???? second...is the safe place to enter?? (since our stop is small) ...it will hit our stop and head in our

G/U + 20 M5

G/U CT +16 M5

G/U +20

M5 entry, pay attention to how nicely the 10ema is "rolling in", the slope I mean.

E/U CT +20

Morning all! Nobody suppose to do this , including me. But this was a pending order I placed before I went to bed. I just woke up, it's 5am for me, and it already closed in profit. Reason: daily 200ema, RN.

A/U M5 I became profitable in trading since I found Arjun, and this thread with all the other great contributors. I want to say that I'm still experiencing with setups, and day after day. I see them happening over and over again, check this out: a/u m5 exactly the same setup , I traded on friday on g/u

or this one, on g/u m5. the very same setup like yesterday

E/Y -25 pips

My brother Arjun, here is what I think. Good news is I read your mind, I was thinking the same thing, last night in late asia session. 6 4hr candles could not make a bounce off the 200ema. I entered on m15, set my stop, and had to go to bed. The rest is on the chart, the Frankfurt boys took out my stop to the dot. They took my stop out, but they can't take away what I've learned from you.

thoughts...

E/Y H4 now??

my eyes are tired, going out to enjoy a sunny day.

G/U H1 +20+20

end of month plus friday today. G/U had a nice run down in the London session, so I take what I can in NY. risky ct trade. Entry was purely taken of the H1 timeframe. inverted hammer candle on adr, and Pip26 and Xman, entry was made when the next candle turned blue and started to go up. I just wanted to show you example when I don't wait for candle to close

A/U m5

A good pin bar has to stand out of the crowd, so to speak. Like the tallest tree in the forest. It cannot be engulfed or covered by other candles. The stronger it is if it's on a strong level, like RN, pivot, yest. H or L, resistance, support etc..

E/U

I think I had too much rest over the weekend, because I see things the other way around today. It almost got my stop too. End result +20. The chart with the sell is Arjun's , the buy is mine.

EY H4

1, E/Y H4 chart was a level to watch out for at RN.

2, M5 showing possible entry, I wasn't there to take it.

also, in my observation when adr is reached and price goes to the next RN, you can almost take it to the bank.

E/Y

m5 , 200 ema setup. I forgot about the news got out +10

E/U +16

finally I got something out of NY session. See the bottom, it didn't want to go lower, I got in the flying candle.

G/U +12+13

M15 chart, classic adr setup, adr, RN, Day10ema, 800ema, yesterday's high, and my Hangman candle!

E/U CT +15

very slow because of NY bank holiday. I closed it for +15. reasons: Rn, Day 10ema, H1 200ema, PPA

E/U CT +20

1, M15 chart for entry 2, H1 confirmation from HTF reasons: bounce off yesterdays low, RN, Day 200ema

like these?

G/Y H4

Arjun: «Gj is going up again....there will be another push down from ONE point watch it....if it goes to the other RN(i presume it wont go that far)if it does short with heavy risk.... ONLY experts....only experts....»

is that ONE point you meant my brother?

A/U M15 is this what Arjun is telling us over and over?

G/J +20 trend trade

I had very little time to trade lately, got to my comp. late every day, and did a lot of reading instead of trading. Looking at Gibril's posts and charts. He's above and beyond your imagination. Studying his charts, thinking about it. Watching the H1 bounces on the 10ema, looking for entries on M15. This thread is the best here in FF. you can learn from talented and helping people. Love all my brothers and sisters here.

I had a busy day with other commitments today, I managed to take two trades in the morning, and one more late in the day when I got back to my comp. The first two are E/U +14, and G/J +20. The last is E/j +20. The first two were taken on H1 10ema bounces, the E/J on H4 10ema bounce, all away from 200ema.

G/U M15 Just like Arjun showed us, bounces are getting smaller and smaller. that's how he knows it's gonna break it, that is the 200ema.

I took that last long at the touch of h4 10ema, and now it's rolling over , broke through 10ema, wait for retrace back to ema, target day 10ema

G/J M15

This one is Arjun's favorite. He attacks these like a sniper,

E/J , G/Y

I got stucked with these two pairs today, didn't look anything else. Took a long time to hit profit, but made 20pips on each three trades. In hindsight they were all early entries. I should've entered at red arrow. Good weekend to you all.

E/J

Like I said the g/j was a bit early entry, but the e/j (that was the first chart), was taken at the top of the pullback, 123 you can spot it on the chart.

I always base my trades on HTF, my bias was short for both pairs today.

This is not a mechanical system for me, you will feel the flow with screentime and practise. Here I am adding the e/j H1 chart to show the entry was made in pullback when it came back in a slingshot.

Aud/Cad +45, +50

It was a bounce off h4 800ema, also Day 200ema. I had my second target at H1 200 for 80 pips, but I am not good at holding that long. charts H4, H1

e/cad ct +20

Thanks Brother, and for Gibril too. It was a good day, and I finished it with one ct trade, to keep the habit. lot of confirmation here, adr had been reached +went to next RN + 800ema= Day 10ema, + Day 200ema

I agree with Gibril if it's FIRST touch price will bounce off some, then continue or break through. The other thing you wanna pay attention to here is the 10ema. Compare the two circles on chart added. Best to take when 10ema crosses 200ema, retrace and there you have your doji or pin. Good pipping to you!

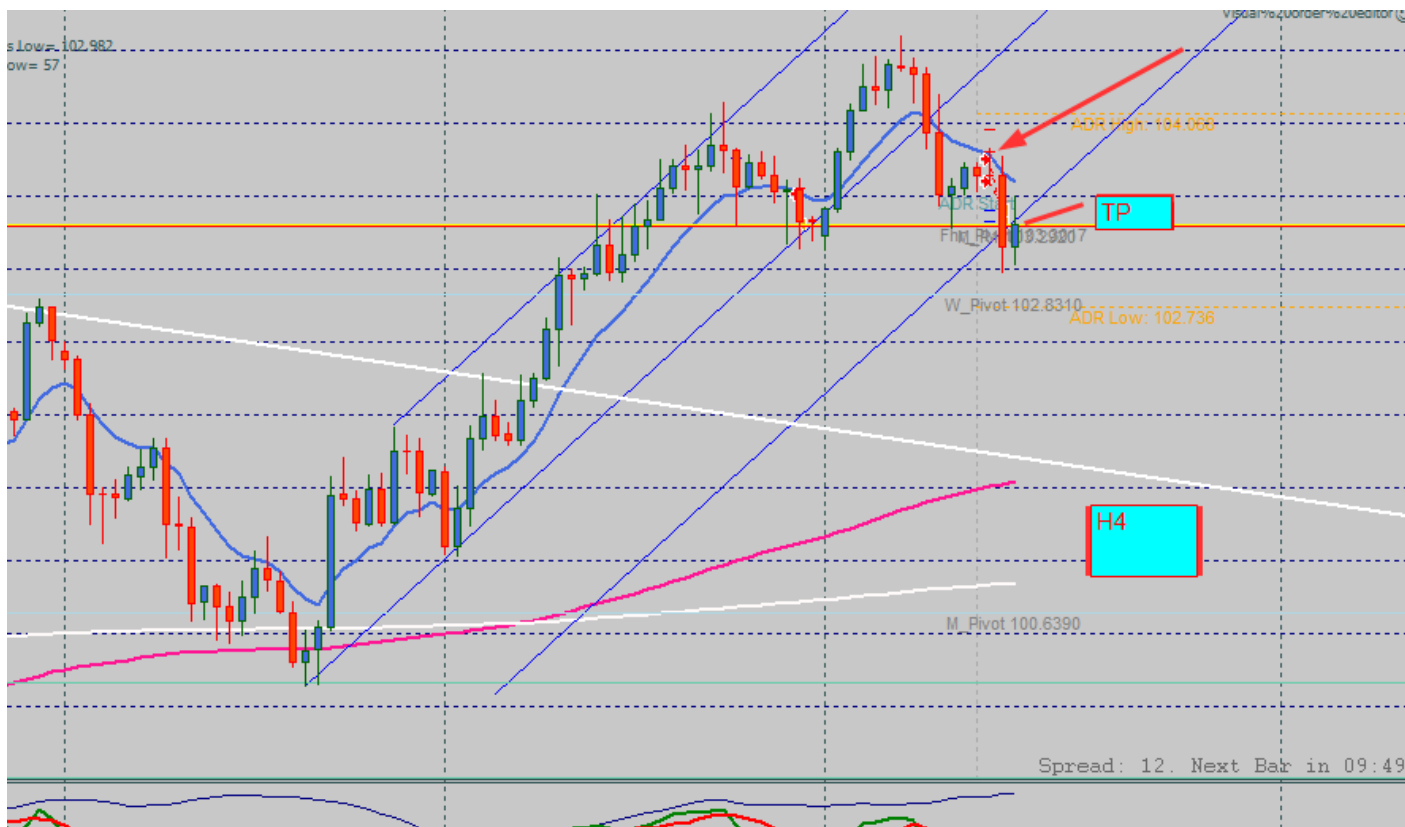

Already made my 100 pips today, on HTF setups. Entries were made in asian session on H4 and H1 charts.

E/J +44, +20, U/CAD +35

first two charts u/cad h4, h1 second two charts e/j h4, h1

E/U

H4 was below 10ema, so I was waiting for pullback to the h4 10ema to go short. I got confirmation on H1 and entered , tp at RN.

The first red candle that broke through the 200 ema , we don't know if it's going to continue , we wait for retest of 200ema, and enter at that red candle as confirmation. Note, the 10ema crossed 200ema as well, with good angle.

E/U

My trade today on e/u made 60 pips. We had a lovely pinbar hanging on the daily 10ema. I was expecting price to come down to D 200ema for a triple bottom. Waited for some retracement, entered in pullback just above RN. I had two more limit orders at 38.2, and 50% fib. but they didn't get picked up. Went to bed , woke up to tp.
