| Forex Trade Oracle (Managed Account) | 81 – 87 |

Dean Malone's E.A.S.Y. Trading Method

E.A.S.Y. Method

EUR/USD 1-Hour

E.A.S.Y. Method

EUR/USD 1-Hour

Why the E.A.S.Y. Method?

Mark Douglas, author of Trading in the Zone, states:

*“The best traders have developed an edge
and more importantly, they trust their edge.”*

Why the E.A.S.Y. Method?

My “*trading edge*” rules:

1. A high probability of success.
2. Enter and exit trades without conflict or stress.
3. Trade decisions dictated by price action, not by my preconceived beliefs and opinions.

What is E.A.S.Y.?

E = Effective

Provides me an effective edge in my trading.

What is E.A.S.Y.?

E = Effective

A = Accurate

*Delivers a high degree of probability and
predictability.*

What is E.A.S.Y.?

E = Effective

A = Accurate

S = Simple

Keeps my analysis simple in order to get a quick snapshot of the market, and make trading decisions with less stress and anxiety.

What is E.A.S.Y.?

E = Effective

A = Accurate

S = Simple

Y = Yield

Yields a higher ratio of winning trades versus losing traders. It's a numbers game!

E.A.S.Y. Method

There are 3 primary market conditions
I look for in a potential trade:

1. Price action
2. Momentum
3. Strength

E.A.S.Y. Chart Setup

- Average Price Bars
- Price Action Channel
- Traders Dynamic Index

Average Price Bars

Average Price Bars

- Provide a better depiction of current market.
- Reveal market strength & consolidation.
- Eliminate fluctuations of nominal price action.
- Remove the noise of price distortion of the underlying trend.

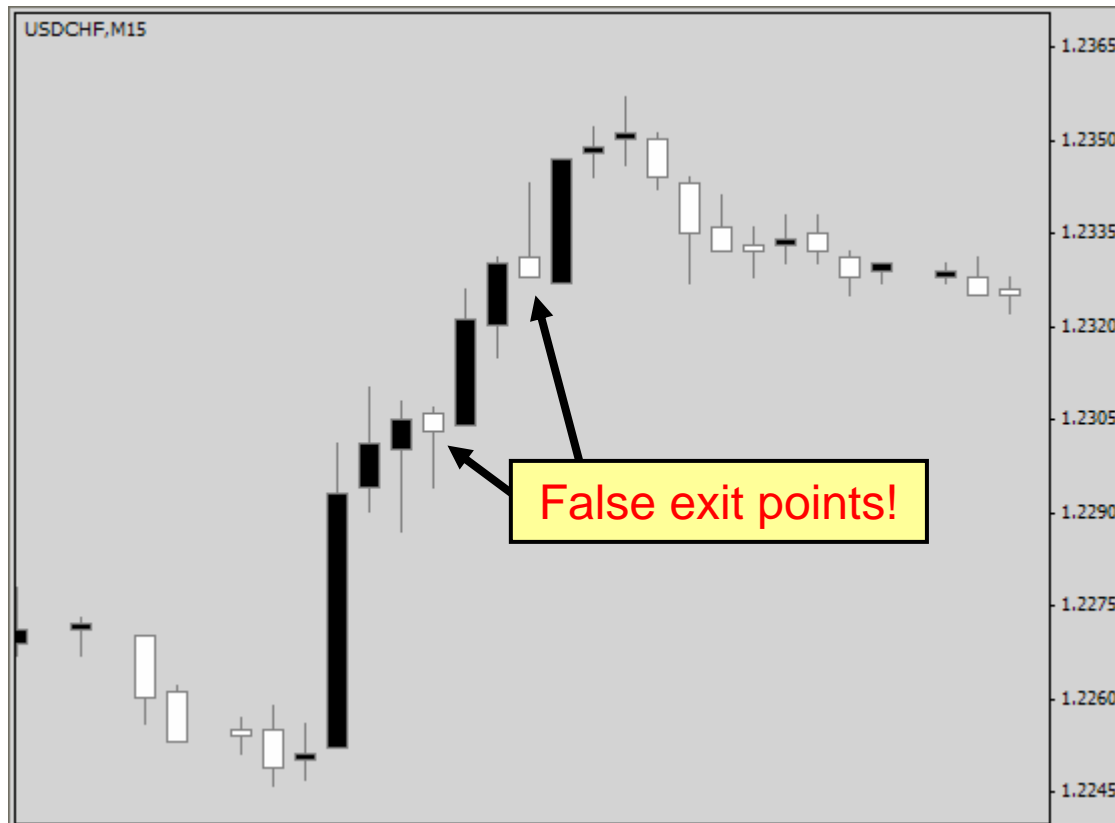

Average Price Bars

- Use the Heiken Ashi method.
- Heiken = “Average”
- Ashi = “Bar”
- Heiken Ashi averaging technique
 - $haClose = (Open + High + Low + Close) / 4$
 - $haOpen = (haOpen(previous\ bar) + haClose(previous\ bar)) / 2$
 - $haHigh = \text{Maximum}(High, haOpen)$
 - $haLow = \text{Minimum}(Low, haOpen)$

Typical Candlesticks

Typical Candlesticks

Average Price Bars

Average Price Bars

Average Price Bars

Average Price Bars

Average Price Bars

Average Price Bars

Price Action Channel

Traditional Price Channel

Traditional Price Channel has two formats:

1. A pair of trend lines above and below price like the Linear Regression Channel.
2. An envelope of bands around price with set deviation limits such as Keltner Channel.

Traditional Price Channel

Used to determine upper and lower boundaries and signal potential reversal or breakout.

Traditional price channels can cause “reactive” trading!

Price Action Channel

Sets inside of price movement...instead of outside of price wait for the market.

Used by institutional traders and sophisticated trading programs.

Promotes “responsive” trading!

Price Action Channel

- Use Smoothed Moving Average
- Top of Channel = 5 period, High
- Bottom of Channel = 5 period, Low

Alternatively, use an 8 period EMA, High & Low.

Price Action Channel

Price Action Channel

- Provides overall trend direction.
- Reveals periods of consolidation.
- Used primarily as an Entry target.
- **BUY Trend** – Average Price Bars tend to run on top of channel.
- **SELL Trend** – Average Price Bars tend to run on bottom of channel.

Price Action Channel

“Good BUY (Long) Trend”

Price Action Channel

“Good SELL (Short) Trend”

Price Action Channel

“Range-Bound, No Trend”

Price Action Channel

“Entry Condition using PAC”

Traders Dynamic Index

Traders Dynamic Index

A hybrid indicator developed to indicate market conditions related to *trend direction*, *momentum*, and *market volatility*.

An “all-in-one” indicator!

Traders Dynamic Index

Step 1: RSI Price (Green) Line

*Rules: Trade Long when **RSI PL** > 50.*

*Trade Short when **RSI PL** < 50.*

*Consider exit when **RSI PL** is > 68 or < 32.*

Traders Dynamic Index

RSI Price Line compared to Price Action

Traders Dynamic Index

Step 2: Trade Signal (Red) Line

*Rules: Trade Long when **RSI PL** > **TSL**.
Trade Short when **RSI PL** < **TSL**.
Exit trade when **RSI PL** & **TSL** crossover.*

Traders Dynamic Index

Step 3: Market Base (Yellow) Line

Rules: *Market Base Line (MBL) is the Overall Trend.*
Trade Long when *RSI PL* is $>$ *MBL*.
Trade Short when *RSI PL* is $<$ *MBL*.

Traders Dynamic Index

Market Base Line compared to Price Action

Traders Dynamic Index

Market Base Line forecasts Market Reversals

Traders Dynamic Index

Step 4: Volatility Band (Blue) Lines

*Rules: Possible to add to a Long when **RSI PL** is > **VB**.
Possible to add to a Short when **RSI PL** is < **VB**.
Consider exit when **RSI PL** crosses back over **VB**.*

Traders Dynamic Index

Volatility Bands compared to Daily Price Action

Traders Dynamic Index

Volatility Bands compared to Intraday Price Action

E.A.S.Y. Method

Putting it all together!

- **Average Price Bars**
 - Heiken Ashi indicator
- **Price Action Channel**
 - 2 Smoothed Moving Averages
 - 5 period, High
 - 5 period, Low
- **Traders Dynamic Index**
 - RSI = 13 period, Close
 - Volatility Band = 34 period, Close
 - RSI Price Line = 2 period, Close, SMA
 - Trade Signal Line = 7 period, Close, SMA

E.A.S.Y. Method Entry Rules

E.A.S.Y. Method

All systems GO!

Average Price Bars (APB)

- Look for **Positive** or **Negative** bars trending.
- Monitor the current **haClose**.
- **Long** entry = $\text{haClose} > \text{PAC High Moving Average}$
- **Short** entry = $\text{haClose} < \text{PAC Low Moving Average}$

E.A.S.Y. Method

All systems GO!

Price Action Channel (PAC)

- Monitor the direction of the Channel.
- Monitor the High & Low Channel values in relation to the current haClose.
- **Long** entry = haClose > PAC High & PAC uptrend
- **Short** entry = haClose < PAC Low & PAC downtrend

E.A.S.Y. Method

All systems GO!

Traders Dynamic Index (TDI)

- Long entry = RSI PL > 50, TSL, and MBL.
(**Long** entry = **Green** line > 50, **Red** line, & **Yellow** line)
- Consider adding to Long if RSI PL > the upper Volatility Band and > 50, but < 68.
- Avoid entering a Long when RSI PL > the upper Volatility Band, > 50, and > 68.

E.A.S.Y. Method

All systems GO!

Traders Dynamic Index (TDI)

- Short entry = RSI PL < 50, TSL, and MBL.
(**Short** entry = **Green** line < 50, **Red** line, & **Yellow** line)
- Consider adding to Short if RSI PL < the lower Volatility Band and < 50, but > 32.
- Avoid entering a Short when RSI PL < the lower Volatility Band, < 50, and < 32.

E.A.S.Y. Method Entry Setups

Long Entry: (*All conditions are satisfied.*)

1. APB haClose > PAC High Moving Average.
2. PAC trending up.
3. TDI = RSI PL > 50, TSL, and MBL.

Short Entry: (*All conditions are satisfied.*)

1. APB haClose < PAC Low Moving Average.
2. PAC trending down.
3. TDI = RSI PL < 50, TSL, and MBL.

E.A.S.Y. Method

Exit Rules

E.A.S.Y. Method

Time to Exit the money train!

➤ APB Long exit

Positive bar is much shorter than the previous bar or changes to a negative bar at close.

➤ PAC Long exit

APB closes inside the channel.

➤ TDI Long exit =

1. RSI PL crosses back below the TSL to the downside.
2. RSI PL > 68.
3. RSI PL crosses back below the upper Volatility Band to the upside.

E.A.S.Y. Method

Time to Exit the money train!

➤ APB **Short** exit

Negative bar is much shorter than the previous bar or changes to a positive bar at close.

➤ PAC **Short** exit

APB closes inside the channel.

➤ TDI **Short** exit

1. RSI PL crosses back over the TSL to the upside.
2. RSI PL < 32.
3. RSI PL crosses back up over the lower Volatility Band.

Who is CompassFX?

Scott Maddin

Registered Futures Broker &
Founder of Compass Financial

Dean Malone

Experienced Trainer &
Private Trader

Kim Pingleton

Experienced Forex IB &
Fund Manager

Including a Staff of Series 3 Brokers

COMPASSFX™
we know what traders want

History of CompassFX

- 1991 – Compass Financial, NFA registered futures firm, started.
- 2003 – Compass Foreign Exchange LLC (CompassFX) founded.
- 2004 – CompassFX establishes IB relationship with IFX Markets and offers the ActForex platform with one-click multiple account trading designed for traders and fund managers.
- 2005 – CompassFX offers access to Forex Trade Oracle managed account program.
- 2006 – CompassFX establishes IB relationship with FXDD and offers the MetaTrader 4.0 platform to clients.

COMPASSFX™
we know what traders want

Forex broker with a trader's perspective

- Access to ActForex & MetaTrader 4.0 trading platforms
- Trade over 20 Currency Pairs
- 2 pip spread - EUR/USD & USD/JPY
- 3 pip spread - GBP/USD & USD/CHF
- Leverage - 100:1 & 200:1
- Mini Lot Accounts
- One-click trading for multiple accounts
- Trailing Stops, Hedging and Scaling-out
- \$500 minimum deposit

COMPASSFX™
we know what traders want

Forex broker with a trader's perspective

Free access to proprietary trading tools

- FXTradeTrend™ forecast (*Week, Day, Intraday*)
- Daily Support/Resistance
- Daily Pivot Points
- Trading Ratios
- Weekly Analysis
- Average Daily & Weekly Ranges
- Trend Continuation / Reversal Analysis
- Leverage & Stop-Loss Principles

COMPASSFX™
we know what traders want

Forex broker with a trader's perspective

- Online educational videos
- Basic & Advance trading strategies
- Forex pivot point calculator
- MetaTrader 4.0 Custom indicators

COMPASSFX™
