

# Manual for Dashboard Trading with 2 PIN MADdash

First thing is, you should extract the files in the [bundle](#) to their respective folders, meaning that any sub-folder in the package must be replicated when you extract files. I.e, what's in the package is in **MQL4\Indicators\PINS** folder, should go to the same place in your MT4 installation data folder, and so on.

When you put the maddash.tpl on the chart, the other indicators and pins will be automatically installed on the chart.

Once you have all files in place, if you want to make use of the MADdash PIN, you will need three charts, one for the Dashboard and two for the MADdashPIN template (that includes MADdash itself and the plugin required to catch its alerts).

## New version of MADdash PIN (DBMultiASM\_MADdash\_PIN\_v2.0) and template (MADdashPINv2).

MADdash can now be used for the 3 available PIN(s) at the same time (v2 of PIN required).

To do so, one chart per PIN is required, and each chart must have the **MADdashPINv2** template loaded (the template includes MADdash itself and v2 of PIN).

The belonging PIN must be assigned in the DBMultiASM\_MADdash\_PIN\_v2.0 properties (by default it has no PIN assignment - PIN1 or PIN2 or PIN3).

In the dashboard preferences, under PIN section, compatibility must be set to **Own** (default in this revision), so **there's no need to choose MADdash compatibility** unless you want to stick to the previous version of the PIN.

DBMultiASM MADdash: PIN1X

USD	M1	M5	M15	JPY	M1	M5	M15	M1	M5	M15	ALERTS
