The contents of this material are for general information and educational purposes only [contents shall also mean the website <http://www.forexmasterlevels.com> or any website ("the sites") the content is hosted on, and any email correspondence or newsletters or postings related to such website]. Every effort has been made to accurately represent this product and its potential. There is no guarantee that you will earn any money using the techniques, ideas and software in these materials. Examples in these materials are not to be interpreted as a promise or guarantee of earnings. Earning potential is entirely dependent on the person using the product, ideas and techniques. We do not purport this to be a "get rich scheme."

Although every attempt has been made to assure accuracy, we do not give any express or implied warranty as to its accuracy. We do not accept any liability for error or omission. Examples are provided for illustrative purposes only and should not be construed as investment advice or strategy. All materials are an educational aid only.

No representation is being made that any account or trader will or is likely to achieve profits or losses similar to those discussed in this report or on the sites. Past performance is not indicative of future results.

By purchasing any content, subscribing to our mailing list or using the website or contents of the website or materials provided herewith, you will be deemed to have accepted these terms and conditions in full as appear also on our site, as do our full earnings disclaimer and privacy policy and CFTC disclaimer and rule 4.41 to be read here with. So too, all the materials contained within this course, including this manual, whether they appear on our domain(s) or are in physical form, are protected by copyright. "Warning: The unauthorized reproduction or distribution of this copyrighted work is illegal. Criminal copyright infringement, including infringement without monetary gain, is investigated by the authorities and is punishable with imprisonment and a fine." We reserve all our rights in this regard.

Alaziac Trading CC in association with <http://www.forexmasterlevels.com>, the sites, content, and its representatives, including Nicola Delic, do not and cannot give investment advice or invite customers or readers to engage in investments through this course or any part of it.

The information provided in this content is not intended for distribution to, or use by any person or entity in any jurisdiction or country where such distribution or use would be contrary to law or regulation or which would subject us to any registration requirement within such jurisdiction or country.

Hypothetical performance results have many inherent limitations, some of which are mentioned below. No representation is being made that any account will or is likely to achieve profits or losses similar to those shown. In fact, there are frequently sharp differences between hypothetical performance results and actual results subsequently achieved by any particular trading program and method.

One of the limitations of hypothetical performance results is that they are generally prepared with the benefit of hindsight. In addition, hypothetical trading does not involve financial risk and no hypothetical trading record can completely account for the impact of financial risk in actual trading.

For example, the ability to withstand losses or to adhere to a particular trading program or system in spite of the trading losses are material points that can also adversely affect trading results. There are numerous other factors related to the market in general or to the implementation of any specific trading program, which cannot be fully accounted for in the preparation of hypothetical performance results. All of which can adversely affect actual trading results.

We reserve the right to change the set terms and conditions without notice. You can check for updates to this disclaimer at any time by visiting <http://www.forexmasterlevels.com>

Your use and reliance on the materials is based on your acceptance of such Terms and Conditions and policies as appear on the site.

Welcome to the Quattro Cash Envelopes

In this special report I will teach you about a unique trading system I developed for trading the Forex market. If you've ever read any of my lessons or reports before you will know that this is another trading system that I have personally traded on my own live accounts.

This method performs well across all currency pairs and when traded responsibly it can deliver spectacular returns.

The Quattro Cash Envelopes system has worked very well for me. I always enjoy tinkering with my indicators and I've spent a lot of time fine tuning and tweaking the indicators to provide the most accurate trading signals.

As mentioned before, this system can be traded on all currency pairs. I usually monitor and trade a wide variety of currency pairs, so you can be sure that this system will provide you with a wide range of signals.

While the system can be traded on all time frames, I would suggest that you start trading it on the M15 or the M5 timeframes for the best results.

The system can also be traded at any given time, but while you are still learning the system you would do well to trade during the most active trading sessions only.

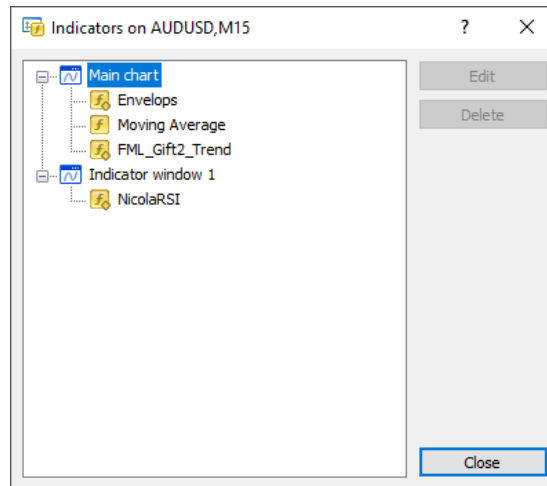

As you proceed through this report, I will introduce you to the different components of the system. We'll start by looking at the different indicators you will use. It's important that you understand what they do and how to read them, so you can spot Buy and Sell trades when they appear on your charts.

I'll then walk you through the rules for identifying both Buy and Sell trade signals and finally show you a few examples so that you can follow my lead and start trading this system as quickly as possible.

Let's begin with the system components...

System Components

The Quattro Cash Envelopes system uses four indicators including a few that were custom built for the Metatrader 4 trading platform. Let's go over all indicators we use in this system.

What is Trend?

The Direction indicator is designed to give you a quick view of the trend based on the higher time frames.

We are picking up the trend data from the 1-hour time frame, and if there is a Bullish trend you will see a **Green** "Bullish" button on the top left corner of your chart as shown below. On the other hand, if there is a Bearish trend you will see a **Red** "Bearish" button on the upper left corner of the chart.

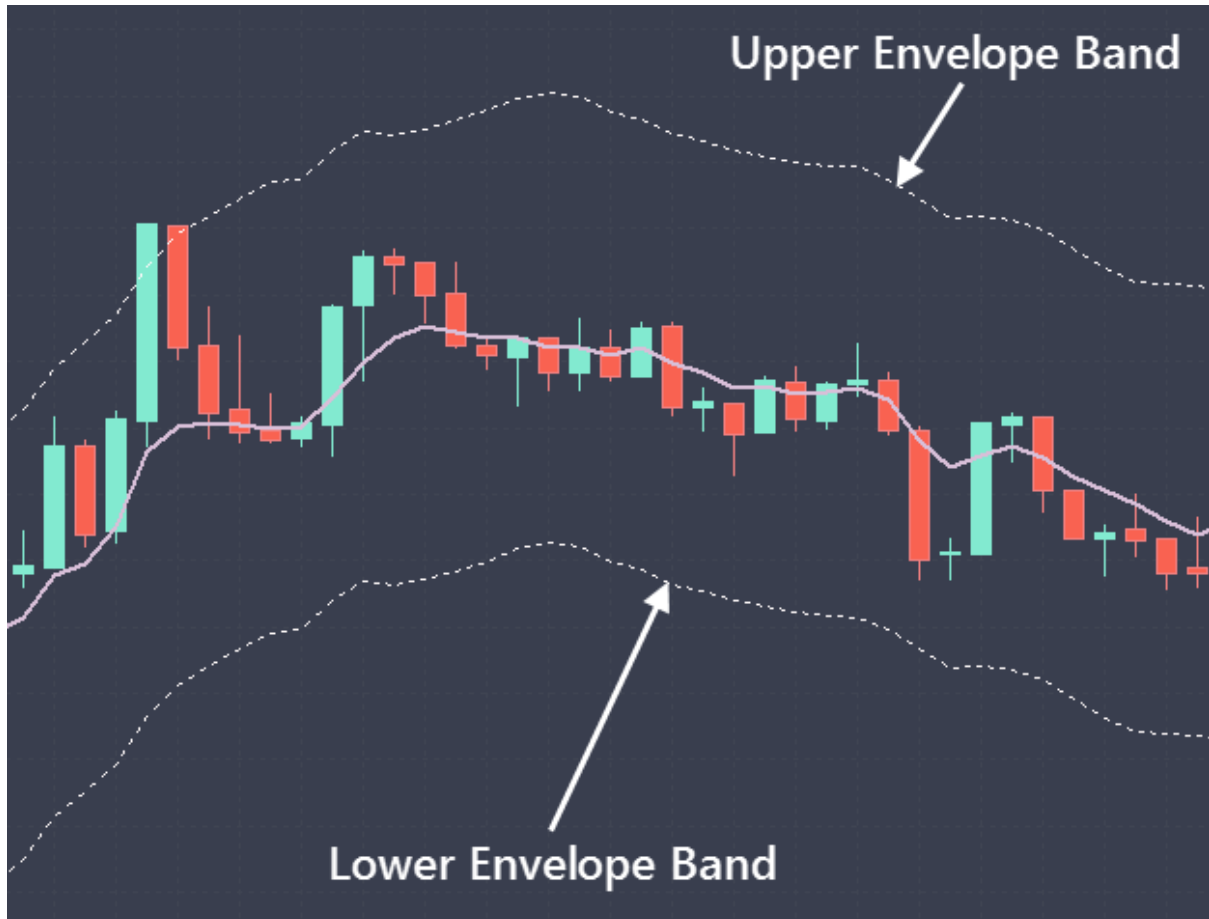

Using the Direction Indicator

The Direction indicator will give you a quick view of which side of the market you should be trading right now. After the "Bullish" or "Bearish" button appears on your chart you just need to wait for next system rule to be met before you proceed. I'd also like to point out that you can use this indicator with any trend-following system you might be trading.

What are Envelopes?

This is an indicator that is formed by two moving averages that define upper and lower price range levels. It is traditionally used to help identify extreme overbought and oversold conditions in a market. It is also useful in identifying trading ranges.

Using the Envelopes Indicator

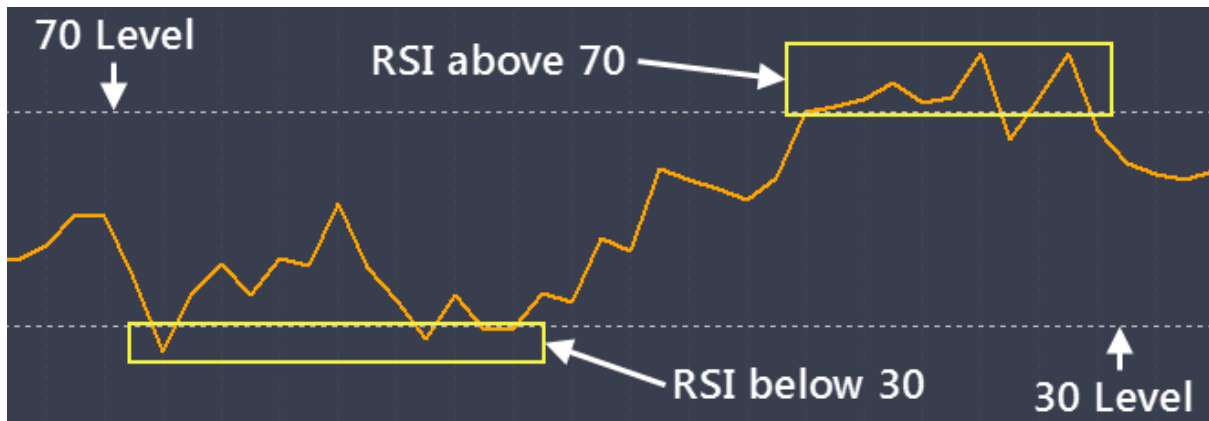

When trading the Quattro Cash Envelopes system, we will be using the Envelopes indicator to identify areas where we may consider entering Buy or Sell trades. I have set the MA Period to 8 and the Deviation to 0.1.

We are looking for areas where the price candles are testing the Upper and Lower Envelope Bands. To identify a potential trade setup, we want to see a candle close either above the Upper Envelope Band (for Sell trades) or below the Lower Envelope Band (for Buy trades).

Once this condition has been met we can look to the next system rule and confirm the signal with the Wilder RSI.

What is Wilder RSI?

The Wilder Relative Strength Index (RSI) is a rate of change oscillator developed by J. Welles Wilder, Jr. I've made some modifications to this indicator so while it looks the same as the original, it has been fine tuned to deliver the best results when trading this system.

Using the Wilder RSI Indicator

This indicator is designed primarily for confirming the trade signals we receive when trading this system.

As you can see on the image above, there are two key levels we will be monitoring when trading this system. These levels are at 70 and at 30 and are shown by the dashed white lines.

The actual Wilder RSI line is Orange in color and will usually oscillate between the upper and lower levels as price moves forward on your charts.

So, we are going to look for the Wilder RSI to be above the 70 level when we want to enter a Sell trade and we want the Wilder RSI to be below the 30 level when we want to enter a Buy trade.

Remember that we will combine this signal together with readings from the rest of our indicators to identify the best opportunities to trade.

If the Market Direction and Envelopes indicators are in alignment, the Wilder RSI serves as excellent confirmation of a trade signal.

What is the 7 EMA?

This is standard Moving Average indicator that has been set to Exponential with a Period setting of 7 applied to the Close. When trading the Quattro Case Envelopes system, we will be using this indicator to identify our Entry points.

Using the 7 EMA Indicator

This indicator is used primarily for identifying the areas where we will enter the market with either a Buy trade or a Sell trade. Here's how it works...

Once we have confirmed the Buy or Sell trade signal using the rest of the indicators in our system we need to wait until price closes either above or below the 7 EMA to identify the ideal place to enter the trade.

For a Buy trade we wait for a candle to close above the 7 EMA and we enter the trade at the open of the next candle (provided that all other rules/conditions have been met).

For a Sell trade we wait for a candle to close below the 7 EMA and we enter the trade at the open of the next candle. Once again, we only proceed to enter the trade provided that all other rules/conditions have been met.

Now that you are familiar with the different components that make up the system, it is time to take a closer look at the rules for identifying Buy and Sell trades on your charts.

Let's continue...

Buy and Sell Trade Rules

Here are the rules for identifying and entering Buy and Sell trades using the Quattro Cash Envelopes system. The rules are followed by a few examples to help you grasp the rules.

REMEMBER! All conditions must be met before any trades may be considered.

Buy Trade Rules

1. The Direction indicator should show a Bullish direction.
2. Wait for price to test (or touch) the lower envelope band.
3. Check and confirm that the Wilder RSI is below the 30 level.
4. Wait for price to close above the 7 EMA.
5. Enter a Buy trade at the open of the next candle.
6. Place your Stop Loss below the most recent low.
7. Place your Take Profit at double the number of pips away from your entry as your Stop Loss (1:2 Risk/Reward Ratio).

The rules for identifying and entering Sell trades using the Quattro Cash Envelopes system is simply the reverse of the Buy trades.

Sell Trade Rules

1. The Direction indicator should show a Bearish direction.
2. Wait for price to test (or touch) the upper envelope band.
3. Check and confirm that the Wilder RSI is above the 70 level.
4. Wait for price to close below the 7 EMA.
5. Enter a Sell trade at the open of the next candle.
6. Place your Stop Loss above the most recent high.
7. Place your Take Profit at double the number of pips away from your entry as your Stop Loss (1:2 Risk/Reward Ratio).

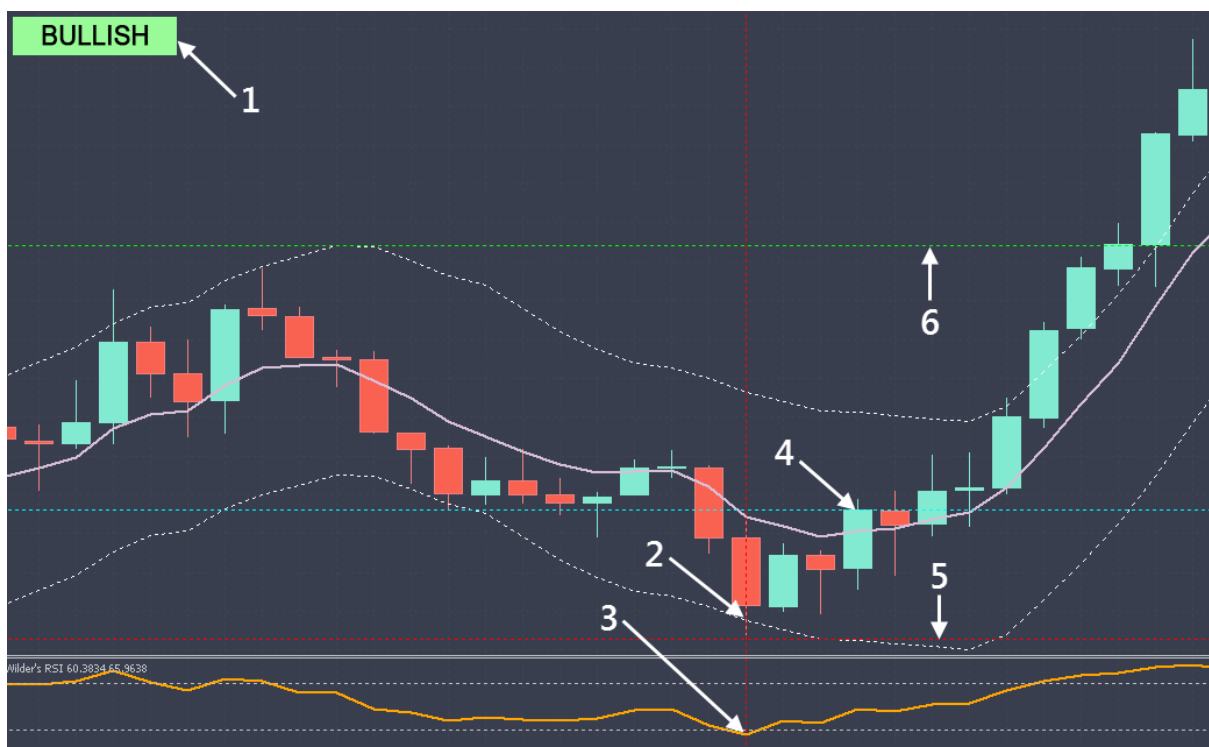

As you can see the rules are very precise. If at any stage you find a scenario where the rules are not entirely met, do not enter a trade. Just wait for the next setup and ensure that all the conditions have been met.

There's nothing better than seeing a trading system in action. So, let's look at a few trades that will help you get a better idea of how the system works.

Buy Trade Example

On the image below, you can see an example of a Buy trade I entered on the EURUSD M15 timeframe. At Point 1 you can see that the Market Direction indicator is showing a Green Bullish signal which means we are looking to enter the market with Buy trades only.

At Point 2 price touches the Lower Envelope Band so I checked the Wilder RSI for confirmation. At Point 3 you can see that the Wilder RSI is below the 30-level confirming the trade signal. At this stage, I need to wait for a candle to close above the 7 EMA so that I can enter the trade.

This occurs at Point 4, so I entered a Buy trade at the open of the next candle. As soon as I entered the trade I set my Stop Loss and Take Profit levels.

For the Stop Loss I am using the most recent low seen at Point 5. I am using double the amount of pips for my Take Profit level which is set at Point 6.

As you can see from the image above, we managed to get a nice profit after about an hour and half.

Sell Trade Example

On the image below, you can see an example of a Sell trade I entered on the USDCHF M5 timeframe. At Point 1 you can see that the Market Direction indicator is showing a Red Bearish signal which means we are looking to enter the market with Sell trades only.

At Point 2 price touches the Upper Envelope Band so I checked the Wilder RSI for confirmation. At Point 3 you can see that the Wilder RSI is above the 70-level confirming the trade signal. At this stage, I need to wait for a candle to close below the 7 EMA so that I can enter the trade.

This occurs at Point 4, so I entered a Sell trade at the open of the next candle. As soon as I entered the trade I set my Stop Loss and Take Profit levels.

For the Stop Loss I am using the most recent high seen at Point 5. I am using double the amount of pips for my Take Profit level which is set at Point 6.

As you can see from the image above, we managed to get a nice profit after about an hour or so.

Conclusion

Now that you have all the information you need to trade the system, I would like to share a few advanced tips that will help you get the most out of trading the Quattro Cash Envelopes system so that you can achieve the best results.

As I mentioned earlier, the system can be applied to all time frames with equal success. However, you will notice that there will be fewer tradeable signals when trading the higher timeframes.

The best thing to do would be to trade the M5 and the M15 timeframes. This would generally produce between 2-3 valid trade signals per day.

I usually trade the following currency pairs with this system, but it will work on all currency pairs. My favorite pairs to trade with this system are as follows:

EURUSD, GBPUSD, USDCHF, USDJPY, AUDUSD, USDCAD, EURJPY and GBPJPY.

It's good practice to risk no more than 1-2 percent of your account balance on any given trade. Also remember to tighten your Stop Losses around High Impact News Releases or avoid trading at least 15 minutes before and after these events.

The Quattro Cash Envelopes system is easy to trade, and it has performed very well across all types of market conditions. I am sure that once you start using it, it will become one of your personal favorites.

Just follow the rules and keep these guidelines in mind while you are trading and you're sure to perform better than the vast majority of traders out there.

I wish you the very best in all your trading endeavors.
