Risk Disclosure

There is great risk trading in the forex market. You should always use funds you can afford to lose no matter how good the trading tool, EA or system you are using. Loss and even total loss can happen

The forex trading EA you have here is of high-quality but can be abused or misused by individuals causing the possibility for error. It's important to understand what you are using and to make your own assessment on how you want to proceed in your trading.

I AM NOT YOUR FINANCIAL ADVISOR. You are free to make your own choices with the information I have available to you.

Be safe and responsible.

Backtesting/Simulated Performance

CFTC RULE 4.41 - Hypothetical or simulated performance results have certain inherent limitations. Unlike an actual performance record, simulated results do not represent actual trading. Also, since the trades have not actually been executed, the results may have under- or over-compensated for the impact, if any, of certain market factors, such as lack of liquidity. Simulated trading programs in general are also subject to the fact that they are designed with the benefit of hindsight. No representation is being made that any account will or is likely to achieve profits or losses similar to those shown.

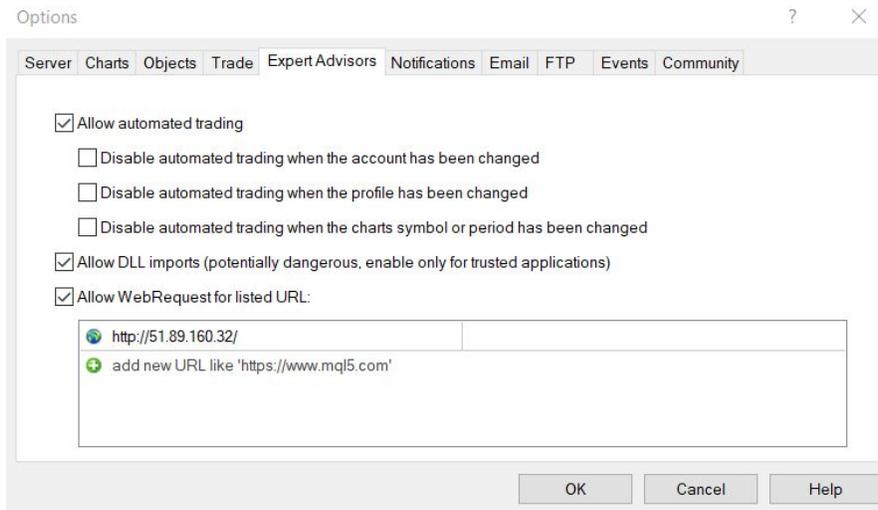

You should be aware that trading Foreign Exchange carries a high level of risk, and you can lose some or all of your investment. The high degree of leverage that is often obtainable in forex trading, can work against you as well as for you. The use of leverage can lead to large losses as well as large gains. You must be aware of the risks and be willing to accept them in order to invest in the forex markets. Don't trade with money you can't afford to lose. We will not be liable or responsible for any loss or damage due to any reason. By using the RMI Expert advisor, you acknowledge that you are familiar with these risks and that you are solely responsible for the outcomes of your decisions. We accept no liability whatsoever for any direct or consequential loss arising from the use of this product. It's to be noted carefully in this respect, that past results are not necessarily indicative of future performance.

INSTALLATION

1. Double-click the RMI EA V9 Self-installer

2. Open up your mt4 platform

3. Go to the Tools Menu -> Options -> Expert Advisors Tab. Check Allow Live trading and all the outer boxes. You don't need to do anything else in this menu besides checking the correct boxes.

Now click on the toolbar to activate autotrading.

It's recommended you use an ECN Account at your broker for the best possible RMI EA V9 performance!!

DO NOT run EA's other than RMI EA V9 on your trading account!! It's NEVER safe or smart to run multiple strategies on one account!

RMI EA V9 Usage

250:1 leverage recommended minimum account size is \$2k
Max lot size = 0.01

100:1 leverage recommended minimum account size is \$5k

Max lot size = 0.01

50:1 leverage recommended minimum account size is \$10k

Max lot size = 0.01

Understanding the settings

"Max spread pips"

Trades will be blocked if your spread is above this pip amount.

"max slippage pips"

Trades will be blocked if order slippage is above 1 pip.

"Risk factor"

How much risk you want to take. Standard is 1.0. Increasing this number will increase the trade risk and size. *"1.0" is recommended!*

"Lot"

Set to 0 basically means, auto-risk based on your leverage and account size. You can manually set this to whatever lot size you want the EA to start trading. *"0" is recommended!*

"Minimum pips last candle"

Default is set to "0". The larger this number, the less trades the EA will take. It's recommended keeping this number at "0" but if you want the EA to do less trading, increase this number to something like 1-10

"Magic Number"

This can be any number. It's recommended you don't change this number.

"Buy Level"

Decreasing this number will cause the EA/strategy to wait for a more extreme market before entering BUY trades.

“Sell Level”

Increasing this number will cause the EA/strategy to wait for a more extreme market before entering SELL trades.

“Use Grid”

This function allows for the EA to enter multiple trades on a grid to help turn bad trades (when they happen) into good ones. It's recommended to keep this function set to “true”

“Grid Pips”

Set to 20 as default. This means the EA will re-enter the market on a 20 pip grid “after” the first trade entry.

“Max Open Orders”

Set to 100 as default.

“Close By Pips Profits”

All orders will close for a specific pips profit amount. Default is set to “true”

“Profit In Pips”

All orders on the traded pair will close out at this specific pips profit amount. Default is set to 25 pips.

“Close By % Loss”

All orders on the traded pair will close out for a realized loss if set to “true”. Default is set to “false”

“Loss %”

All orders on the traded pair will close out for a realized loss to this specific amount. Default is set to “35%” but “Close By % Loss” needs to be set to “true” in order for “loss %” to be active.

Best of luck and stay safe!
