[Quoting nimtrader](#)

{quote} by this method you shouldn't really be thinking of entering at all ATM entry by this method in it's most basic form involves entering in areas you can't see on your chart {image} on this chart it shows the R61 from where you'd sell (with convergence) and the S61-100 (buy) better check out page 1 or DRfoex's summaries in the clipboard not to mention your in the middle of a recent range it really could go either way hence the stress for the AUDUSD people with open trades

I just want to correct you. Main idea is entering in a trade 61-100 however there are pairs that range 38 to 38 in case of NU and others and I have repeatedly said I love range trading hence confirmed by PA getting in a trade at 38 is valid trade.

If you personalize losses, you can't trade-Bruce Kovner

[Quoting Recruit](#)

i am so disappointed that i didnt keep holding AU and closed that so soon, on BE and loss..

[Quoting Recruit](#)

Those levels are incredible. Just incredible! I am now in no trade, feel bit disappointed, like that opportunities are running away. But **something inner of me is fighting against and says: Dont enter now..** {image}

Please watch Mark Douglas videos. Please understand firmly probability theory and concept of an Edge. Once you understand this clearly you won't fear taking a trade
cheers

very nice green numbers specially hourly earnings.
hard to be USD bear after this. Anticipating rest of the month USD to gain on all majors but specially on AUD NZD and CAD

Attached Image (click to enlarge)

8:30am	USD	🚩	Average Hourly Earnings m/m		0.3%	0.2%	0.3%
	USD	🚩	Non-Farm Employment Change		200K	181K	148K
	USD	🚩	Unemployment Rate		4.1%	4.1%	4.1%

I am surprised no one else posted what happened after the Wages/Nfp ?

AU, SL previously moved to near above **S61**, but i guess time to pack up and close all **AC** trade taken from below Pivot, **SL** moved three times as trade progressed (few pips above S38/S61/S78) / **S100** is now pierced
i don't feel to hold a position over the weekend_

This was one of the best day and most profitable week since i joined this thread and almost since i started Forex last year. After reading most of the thread and John's pdf as a recap
i was sure to trade this, and i have never used a Demo to trade this strategy
Davit / Mark Douglas / Scott Carney's principles have the power to change the way we relate with currency pairs_ 🙏

Btw I was thinking that there was only fear when I lose trades, but there is also a slight fear when i'm doing well
because of the emotions involved when i am gonna take the next trades... but i guess that is part of our pathetic mind_

File 22 - Davit's Posts on his Pivot Trading thread-2018-02-Pages-155

Happy weekends to all 🙌

This might weaken CAD even more next week.

Canada is willing to walk away from NAFTA, Trudeau says

There is lot of space to go north UC. Crude starting to deflate and this will have an impact on the CAD

you have no reason to sell EG now. Read 1st page please and install anglator, TDI.

If you think you can trade without my indicators then you should not be posting here. The whole point of my indicators are there for a reason and all play a role and part of my system.

This is important. Consider a warning.

Make no mistake about it !!!!! PM Justin Trudeau CAN walk away from NAFTA TALKS . However , it will simply be an admission , for those of us Canadians that actually PAY ATTENTION to this , that Canada has already been defeated and rendered POWERLESS IN NAFTA , BEFORE , any NAFTA TALKS ever began. WILBUR ROSS made certain of that. PRESIDENT TRUMP , (love him or hate him) , KNEW that WILBUR ROSS was THE PERSON to deal with NAFTA. The USA is our largest trading partner in the WORLD !! CANADA ABSOLUTELY needs the produce during the frigid winter months...

UC going north.Nice and thank you for your feedback much appreciated 🙌🍺

{image}

good come back. 🍷

If you noticed trading G pairs is expensive not in terms of pips but margin used. Yen pairs on the other hand least margin used exception GJ EJ.

Keep that in mind when margin is not generous

I love pairs that consume least margin. This has obvious advantage

If you have EG set up and EJ set up both similar for example take the one that takes less margin.

{quote} Nice and stimulating this news at start of the week 🎉 The good of sharing is that other people looking, might change their mind about Monday trading (ex:me) .. always thought Mon was useless but eventually your results prove the opposite ,,, there is always a trade out there as long as the market moves_ {quote} UC it's a pair i don't pay much attention, but as soon as i read your post i noticed the upwards noticeable movement on H4 and also a kind of triple top forming ,,, loved that bounce from S38 I'd like to get in too, but for now...

Trading Cad has been most profitable for me in general.I have gone months exclusively trading AC NC UC successfully
CAD is cheap to trade and more or less very pivot sensitive specially on crosses NC AC.

Start watching all CAD pairs 🙌👍

Just a general advise avoid reading lot of traders inputs on boards specially at TMS
You'll find some recommending buying tops(example EJ "strong buy" at 3740 lol) because TDI is showing north however often these guys don't understand nature of price movement.
There are obvious swings corrections that go contrary to typical MA systems.One ironically was recommending buying EU and Selling AU well obviously this is wrong since both pretty much move in same direction so useless advise and erroneous.
Keep your focus on pivots here! You'll do fine!

Davit, what do you think of the NZD rate announcement this week? I think it will remain unchanged due to the unemployment pressure, which might also prove bearish for NZD. What is your opinion?

Rate will stay the same. Market will start dumping after the announcement pretty much like AUD. There is nothing in NZ economy suggest raising rates now.

This is my opinion and market can prove anyone wrong. NZD should be 70-71 or below it at almost 74 it is overvalued. March FEDs rates is on horizon and I anticipate USD bulls picking up the speed

stats after 4 days of trading. For my critics **yes I do have floating losses** but that's how I trade. Some trades take time to mature example AN have dd on it now but feel super confident its outcome week from now. Lets put it this way if I think trades are total flap I do close them as losses and took plenty of that last month however still finished Jan in profit.

stop selling GU start looking possible longs
watch PA. In my system I don't sell at S61-100 or buy at R61-100
these are swing tops. It may work once awhile but majority of times
price rebounds.

Think about the Edge repetition over series of trades. Guys who trade
MA's, Dashboards get sucked in at buying/selling swing tops but not
here! Here importance is WHERE price is LOCATION!

There are obvious swings in uptrend or downtrend. Knowledge of Elliot
Wave theory helps. Nothing goes straight line.

Please also be aware of ADR

Quoting lordgbengs

EURAUD looking interesting for a down move. Green pips {image}

Its at 38R and I suspect test of 61R 5884 might occur so not taking this trade. Reason it has not come down yet supports my view. Box I drew is accumulation and break out will take place and again reason it has not occurred yet on bear side suggest unfinished business for bulls

you are looking at monthly please look at weekly pivots.

{quote} Many thanks for your comments, I have only loaded 1 position with many more to come partly due to the reason you stated above. Also, the weekly chart is showing we might be close to exhaustion levels. The pivots are weekly they largely correspond with yours. Green pips

better trade is building shorts on NC

After rate decision tomorrow this will plunge down most likely. Rate will stay the same or could even be cut. I added more on spike

In basic terms market has already priced in the "suspense" part now once Vail is revealed then it becomes SELL THE FACT

Quoting classy

{quote} thanks davit bro ,you are always inspiring.i think this thread only thread in forexfactory which is till maintain real character and it is only possible because of you and i strongly support it.

Thanks Classy I try to keep the focus on pivots and what this thread is about. Freeloaders,time wasters,lazy traders and people who can't read bold orange on 1st page are eliminated keeping this on rails.

Opposite of this is TMS where everyone is an expert gives advise and majority don't even post what TMS chart should look like.

Funny how so called expert there recommended EJ "strong buy" when it was at 37+lol(talk about swing top) or buy EU and Sell AU when this idea clearly is in conflict because majority of times both move same

File 22 - Davit's Posts on his Pivot Trading thread-2018-02-Pages-155

direction. Anyway its entertaining to read sometimes but doing that less lately.

Hi Davit and all. I'm an old follower of Davits Pivots thread and have been re-following the thread for the last 6months silently. One thing I noticed from when I first saw this thread Mid-late 2016 is Davit has kept it the same with no deviations to his rules and methods 🙌. I am looking forward to contributing to this thread and wish green pips to all 🙌

welcome back and looking forward for your trades! 🙌

Hi guys NC party has started

{quote} Yes Davit i got it thank you, I scanned all thread impossible to miss it 😊 loaded it already on chart ... looking at it now .. very much intrigued, will practice _/

Its not so much understanding specific shapes but understanding market moves in waves (Elliot Wave theory).My pivot system 61-100 often corresponds to key harmonic reversal patterns. Its just easier to trade pivots.As you already know my pivots are fib projections which are harmonic in nature.

{quote} Thanks Davit, I get so tied up in shit, I forget where I am going. I thank you for the heads up! I get so confused and end up with a trade that is a loser, it brings me down. I thank you for giving me another option, before I drop into a depression about my losers!

Hi friend

I am sorry you are having challenging times with trading and it is challenging by nature. I don't know the losers you took perhaps you can post examples like bought UC at 26.60 or sold EU at 21 should be sufficient info.

We should forgive ourselves for mistakes. This is a must. Learn from them and move on. Don't beat yourself.

below from Ruben Philosophy from clipboard

Chapter 24

FORGIVENESS

One of the biggest problems I see with traders is that they refuse to forgive themselves for

trading mistakes. This causes a much bigger problem than most people realize. You see, when you make a trading mistake, you need to forgive yourself for making that mistake.

But the thing is many people do not forgive themselves for their mistakes. In fact, they do quite the opposite. They beat themselves up and continually picture what they did wrong in vivid detail. This is the very worst thing you can do after making a mistake, trading or otherwise.

Forgiveness is a key concept in Psycho-Cybernetics. As we've just learned about how our subconscious works, we know that if we continually picture in vivid detail something, it causes that picture to come true for us. Or it at least makes it much more likely for it to come true. So it only makes sense that if we make a mistake, we must forget that mistake and forgive ourselves completely. If, on the other hand, we don't forgive ourselves and relive the mistake in our minds again and again, what do you think is going to happen?

It's obvious that we will repeat the mistake. This happens because our subconscious does not care whether we give it good or bad information, it simply sees the clear pictures we give it and tries to act it out in our lives. Obviously, it can only act this picture out if it's within our capabilities. And I think we all know that making trading mistakes is quite within our capabilities. This is the reason it is so important to forgive ourselves when we make a mistake or an error. If we don't, we are likely to relive the mistake in our minds and then most likely project it onto our trading. This will cause big problems.

If you think back, I'm sure can you think of times where you made mistakes and beat yourself up for it. Not forgiving yourself, no matter what the mistake, will bring out the worst emotions. Remorse, regret, self-doubt, and guilt all come with not forgiving ourselves for a past mistake. You've heard it all before. I'm sure you've been told to forget a past losing trade and move on to the next one. Emotions are used correctly and appropriately when it applies to something in the present time. Since we cannot live in the past, we can't appropriately react emotionally to the past.

As Dr. Maltz says, "The past can be simply written off, closed, forgotten, insofar as our emotional reactions are concerned. We do not need to take an emotional position one way or the other regarding detours that might have taken us off course in the past. The important thing is our present direction and our present goal. We need to recognize our own errors as mistakes.

Otherwise, we could not correct our course and steering or guidance would be impossible. But it is futile and fatal to hate or condemn ourselves for our mistakes."

One of the biggest reasons people get into losing streaks while trading is because they confuse their losing trades with themselves. In other words, we conclude that because we had a losing trade or a series of losing trades, we are a losing trader.

But the important thing to remember here is we are not our losing trades. Losing trades are part of trading. There isn't a single trader in the world who doesn't have losing trades. The only way to avoid them is not to trade in the first place. You cannot be a successful trader until you take mistakes and losing trades for what they really are. They are simply by-products in the trading game and need to be used to gain learning and understanding. But in no way do they define us as a person.

But that is where the big problem comes in. Many people let their losing trades and mistakes define them. If they're having trouble and have had a series of losing trades, they start to think of themselves as a loser. They continually think of themselves in that way. As we know from before, this kind of thinking will just bring on more of the same.

Forgiving yourself completely is the only way to avoid this trouble. You are not your mistakes and losing trades. You must put the past behind you and go forward. Holding a grudge against yourself only hurts yourself. Forgive yourself, it's the only way to be successful.

I set TP on AJ 8520 then went to work but I think this is probability a mistake I anticipate Yen weakening next week and AJ has a chance reaching above 8550

Most likely if TP does not hit I will move it higher.

US govern shut down plus Kuroda reappointment news was enough for serious spike down however these factors are "consumed" and looking for corrections on the Yen

I had a great week in 7days of trading I made more then my entire month's pay at my regular job.This is motivating me as I like to trade full time which is my goal

lol close positions and they go up TBH that chart the other day made me anxious about the position lesson to self don't look at others charts esp if it's not going to be explained

I can't make head or tail out of your posts.No offense
 When I take a position I own that position and doesn't matter what other charts other traders do what's important is what market does. This includes even my charts.I don't know the future and anything can happen.This is about series of trades exploiting an edge.No drama over few losses but you were in margin recently hence you were over trading.That you HAVE CONTROL over.Work on that.
 Bring the focus on yourself and your psychological aspects of trading.You in essence trading yourself not the market.Market is neutral

I might take a couple of days off sniperdebt keeps repeating what was in his post but that doesn't help me understand the chart that he posted it's ok my trade and I do own it

sniperdebt shares what he shares and it does not matter in greater scheme of things! again market does what it does.I looked at the same charts and my reaction was neutral its just probabilities he might be right or wrong.

You understand the difference right?I am trying to make you see that it does not matter what anyone says market dictates our actions! When your confidence increases over time you will understand deeply what I am saying.

Not sure if i have been impatient but those series of LH LL EURAUD made me go for it .. Australia data for the employment was quite strong last month.. and Eur doesn't seem to have gained much against its peers and we will see the 15th what will be like for AUD {image}

selling at 61S is low probability not part of my system.Might work but I avoid it as a rule.If you look left its pretty much in a range.

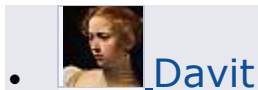

This system is about exploiting an edge over series of trades provided one follows system rules.

Hi Guys, I have been reading the thread all weekend and have decided that this would be a great strategy to trade because of its "stress free" nature and focus on the bigger picture. I wish to make a meaningful contribution with time. Spotted a high probability trade on CADJPY, as it has reached its lowest since 11th August 2017. S61 seems like a good level to watch out for a reversal. {image}

Welcome to pivot world.

Yen pairs are pretty much all overstretched. King is UJ. UJ moves up then its a domino effect on crosses

Time is a factor in trading. Your trades may not produce results in a day but can be very profitable in 3-5 days. Swings can last 1 week.

Just saying because having to endure temporary DD is part of trading otherwise you will deplete your account with many small losses. Trading small allows this DD not only manageable but allows clarity to see the potential in a trade.

Most retail traders get killed right on the edges when swings turn. This phenomenon is not

File 22 - Davit's Posts on his Pivot Trading thread-2018-02-Pages-155

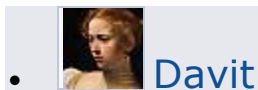

accidental. Market makers push price to hit stops triggering instant liquidity to get filled. For them getting filled at right price what matters hence spikes are part of trading. You must be street smart to see this and overcome it by trading small and larger stops. This is something rarely if ever I read on any systems here at FF. You must understand nature of the beast.

If you personalize losses, you can't trade-Bruce Kovner

Hi Deepdrunk
love Serbian music and as an Armenian we have lot in common.

Armenians were recorded in Serbia in 1218 when Saint Sava invited constructors to build a Serbian Orthodox monastery after he had been to Armenia and seen the beautiful Armenian architecture. The Armenians were to build Vitovnica Monastery, which has preserved a bilingual sacral text in Serbian and Armenian dating to the building.

The first proof of an Armenian presence in Serbia dates back to 1212, at a battle in Kosovo, during which an Armenian battalion fought alongside the Serbian army against that of the Ottoman Empire.

{quote} Thank you so much. I focused the 4h chart and missed the smaller picture.

4hr is common TMS and I don't trade 4hr candles. Lot happens in 4hrs. I am usually in a trade way before that.

My trading philosophy is totally different.

Typical TMS trader would of bought at orange box I drew and would of been in DD now. Sure price is above the channel but huge distance from top of H4 and now. Or if He/She sold once price drops below the pac 5675 area then that's too late the MOVE has occurred already. I hate systems that rely on getting in late when the party has died and **cleaning crew is sweeping the floors**

Hello Davit, how about your trade on NZDCAD from wednesday? Im just curious, about your trade how is it going? Im curious because Im interested how to manage losing trades, how you manage losing trades. DId you closed it on little profit, on brak even or still holding? Regards.

Trade I would not have labeled as "losing trade" some trades takes time.You have to consider time factor in trading.For future reference how I manage my trades may not be appropriate for you since we most likely have different size accounts margin position.

{quote} Congrats on banked pips. I just noticed what to me looks like accumulation over the last 12 days on daily chart for Eur/Aud. What are your thoughts on which way it will break?

you kidding me right? refer previous post!and read this

Five fundamental truths:

1. Anything can happen.
2. You don't need to know what is going to happen next in order to make money.
3. There is a random distribution between wins and losses for any given set of variables that define an edge.
4. An edge is nothing more than an indication of a higher probability of one thing happening over another.

5. Every moment in the market is unique.

– Mark Douglas

You guys continue to be boneheads I am going to stop posting here.Getting frustrating! Let me state this to everyone!
You must understand what trading is.Trading is exploiting an edge over series of trades.Nobody knows the future!We trade the EDGE! Its all probabilities.
Anyone tells you otherwise is bullshitting you!

Disclaimer: My opinions/observations are based on trying to improve myself visually and should not be taken as a signal service. I am still learning and trying to improve my trading. AUD/JPY I see a bit of a range situation on daily chart and I will be looking for buy PA between 84.150 and 82.000 while observing TDI current position, ADR, Monetary policy news & where Pivots line up this coming week. Green pips to all and have a great week!! {image}

Should UJ start going north which I think it will AJ will travel north even faster.

Just a reminder guys don't forget going over weekly calendar events beginning of the week. This habit establishes **awareness** what's coming also awareness how MM positioning their order flow. You must do this preferably Sat or Sun when market is closed. You must maintain professional attitude about this. You are trading against someone! Its a zero sum gain energy transfers from one to another place nothing is created. Your job is to be better in gaining part.

We got RBA monetary policy coming up in 4.3 hrs
This could be very positive for AUD and finally may break EA the camels back to south and propel AN and AJ north
Sometimes events do exactly what the chart patterns suggest. Oversold AUD may get a lift

Why is AJ nose diving? {image}

its a conspiracy Illuminati involvement 🙄

Price can be moved by dynamic traders any time ANY reason. You decide to stay on course or bail out. Consider London and NY still close and Asia often gets it wrong. Most times Asia does not have the liquidity to move price and often goes into a range.

Most cases PA in Asia session I don't take it seriously.

There is nothing wrong with your AJ trade. Leave it alone! Give it a time that it requires

Read the posts and watch the videos by CNtrader to get an idea what

I always stressed its important to educate yourself. Knowledge of ELLIOT Wave patterns gives you confidence to stay in the trade without shitting in your pants.
Knowing how corrections works is a huge plus.
My pivots system 61-100 zone often almost all the time correspond to key turning harmonic patterns which itself relates to EW
All these relates.

Davit 2 questions: 1. On that trade NZDUSD you made monthly goal, right? Isn't too much bet?
2. How do you scale your positions? - do you add more positions when its going against you? or - do you add more positions when its going into your favor direction?

Thanks for not reading the 1st page or sleepwalking through it.

Here it is!!!

STOP LOSS

- 1 Decide how much each swing is worth example \$500
2. Divide \$500 into mini lots for multiple entries example .50c a pip gives 1000 pip distance
3. This allows averaging in orders as seen fit irregardless if previous orders are in red
4. Orders are placed **as long as reason for trade is still valid**
5. If conditions change loss is taken **since orders are not placed all at once this allows smaller loss**

Swings

Each Swing investment \$500 (example yours could be anything)

Swing is taken as loss once -\$500 is reached

There are no exceptions.No running red beyond \$500

Orders broken down into mini lots that satisfies each swing consist of 10-15 trades

My budget for this is 2-3% of account risk say \$500 for example.I then enter trades on mini lots and as long as my 500 is not consumed on DD and I am still confident of my trade I stay on it.I may choose to get out early but most times my SL is predetermined.This allows me to cast a wider net. So my 10mini lots can cover 50pip distance hence capture better RR

There is advantage to trade this way.Should PA go against you and you no longer like the trade you can get out by fraction of lot invested hence your loss is minimal instead of traditional 1 trade 1lot per trade when if wrong loss is substantially higher.

Numbers posted are for examples only

Considering this is additional user name I get the feeling I already banned you but you come back with questions that have clearly already been answered.

You are removed.Green journey somewhere else

Last 24hrs I probably removed 8 people. Its getting annoying. I considered to restrict to yellow and red traders but there are some good traders that have no colors.Only reason why I have not done so since it will be unfair for guys who truly do try to improve.

Lot of pairs are in a limbo waiting for Feds tomorrow.

Both AU and NU are hanging on to WP

goes to show how strong these pivots are. There is no reason to expect dovish Feds. I think they will be hawkish. After severe USD sell off in my opinion corrections will continue.

Attached Images (click to enlarge)

The image displays two candlestick charts, one for AUDUSD and one for NZDUSD, both using the TDI (Trend Direction Indicator) system. Each chart includes a main price window and a TDI window below it.

AUDUSD Chart:

- Price Window:** Shows candlestick price movement from February 14, 2018, to February 20, 2018. A yellow shaded area highlights a period of volatility. A horizontal line at 0.78795 is labeled "Pivot".
- TDI Window:** Displays the TDI indicator with a green line for "Good" and a red line for "Bad". The TDI separation is labeled "Good [3.8]".
- Annotations:**
 - ADR: 77.8% | Today: 56 | 1 Day: 44 | 5 Day: 64 | 10 Day: 72 | 20 Day: 72
 - 2 hr 14 mins until ADR: M1 Leading Index min
 - 3 hr 12 mins until ADR: Construction Work Done q/q
 - 12 hr 42 mins until US: Flash Manufacturing PMI
 - 17 hrs 51 mins until US: Existing Home Sales

NZDUSD Chart:

- Price Window:** Shows candlestick price movement from February 14, 2018, to February 20, 2018. A yellow shaded area highlights a period of volatility. A horizontal line at 0.73438 is labeled "Pivot".
- TDI Window:** Displays the TDI indicator with a green line for "Good" and a red line for "Bad". The TDI separation is labeled "Good [2.5]".
- Annotations:**
 - ADR: 51.6% | Today: 39 | 1 Day: 50 | 5 Day: 73 | 10 Day: 64 | 20 Day: 70
 - #10023978 will 0.05
 - #100337978 will 0.05
 - #10037978 will 0.05

waiting for the Feds. NZD overbought cross the board. Money flowing to "safe" shelter assets. We all know in Forex nothing is "safe" and things can change quickly.

Hi guys

I got right back on NU shorts basically continued where I took TP

You probably noticed I often chase pairs get out get in over and over. Did this a lot this month on

File 22 - Davit's Posts on his Pivot Trading thread-2018-02-Pages-155

EA

Its a way to maximize gains.

Quoting jenbols

This nice Pivots System seem to work also on SPx500 though this is a very risky Index, and a few points against the trade might give an alarming Draw-down, but it gives definitely good profits_ I am becoming more aware about checking my trades with pairs correlations and in this case the Vix/DollarIndex/Usd_ I didn't get filled at the place i wanted and i had to enter it manually below R38, and was slightly late if anyone has experienced the same pls advice_ {image}

File 22 - Davit's Posts on his Pivot Trading thread-2018-02-Pages-155

38S/R is legitimate area for trade if it holds or breaks. In your case it proved difficult to break. Every moment is unique in the markets. It's important you know well what you are trading.

{quote} Hi Davit thanx ok .. i noticed that with this the more you trade and the more mind opens_ Spotting nice setups it is really an art that i am still learning ... The system looks simple and it is complex at the same time, which makes it intriguing to follow_

Importance is not about being all over the place but recognizing good set up and hammering it on every swing.

I am going to post my EA trades here so you can see how many trades I took just this pair alone this month which made roughly 35% slice of my overall gain.

There are over 60 trades on EA alone.

Point I am trying to make is zero in on a kill and continue to milk it. People sometimes here trade 30 pairs. No need you find few that you understand well and hammer every swing

Only reason NZD not tanking yet is Thurs Retail Sales q/q which is projected to be positive.
I may get out before that

[Quoting pabuuu](#)

finished at even today, did one of the big 5 mistakes I have hold on to the trade instead of closing it at -3%. My mistake was that I have thought the trade will turn in my direction eventually and kept it running and when I came back home and went through my rules I have decided to close it at almost 6% (double what it should have been). Luckily enough I have had other trades that have evened out the day by -0.2%. Take the example of me and don't do what I have done (don't keep losers running, close and move on). I just got lucky and managed to...

Pablo good post. Yes managing trades is critical but also understanding position size matters. If your trade is too big you may panic and get out just when swing is changing in your favor. Importance is keeping positions relatively small so your decisions are not clouded but base on real chart and PA and not panic decisions.

I have been in countless situations where extra day made a huge difference in PA. Keep things small. Well even today my NU trades were red all of them and 2hrs later all became in profit. Why didn't I panic? Because 1st I know fundamentally where USD is heading second positions were small enough that my DD was nothing to be concern with. That allowed me to wait in relaxed mood and allowed trades to make money. Often trades need time. Time often easily gets forgotten.

You should really read CNtrader trades and his wonderful thread. He waits for weeks for his trades but his gains are massive. He is full time trader.

{quote}Thanks Davit! Best trade yet! {image}

good job. 💰🍷 try posting with pivots without history so chart looks clear.

There is no value about past history pivots. Some guys requested and others developed it and to me its useless if anything might prevent you for taking trades properly.

We had nice green numbers on unemployment claims then MM decided to pump and dump. When you see price going against fundamentals relax wait. I was kind of anticipating this why I got out of my NU shorts last night. Should retail sales print below expectation tonight NZD will **deflate fast** that means AN longs and NC shorts will pick up lot faster since both are in outer edges.. Often I notice magically happens that chart supports the outcome...this part still amazes me.

Hi Guys closed another very profitable NU short batch

+790

This month might become my record. I did mention I may jump right back in....also did mention I often chase trends until it hits swing low.

In fact I had so many orders it just looks like a thick green band

EA looks promising.Waiting another push north to 38R which is proving range ceiling
I often talked about range trading is my favorite type of trading.Don't be afraid of range.You might of read too much garbage from other systems that range kills etc etc.Well it does not kill in fact its my favorite set up to make max dollars.Importance is identifying it.

Quoting Recruit

{quote} Great job Davit. Records are there for us, that there is always space to get better. NZD seems finally rotating. Still patiently waiting. Expecting TP1 by start of next week. EA in sight. Cheers

I mentioned 8hrs ago about having patience. Well in 8hrs I made over 500 dollars by doing nothing and waiting for NU to drop and it did. That's what I want you guys to learn that trades often need time to mature. Time factor is real. cheers

If you personalize losses, you can't trade-Bruce Kovner

Lets go over again how I trade range.

1st I identify likely scenario of break out Bear side or bull.This is important because this makes which direction I want to trade.

2nd build positions towards likely BO and from range top

3rd trade ONLY same direction of BO not both ways

Example I anticipate EA to BO south based on weekly R and price failing to break higher hence my bias is south.

Now I only will sell EA.The reason is obvious you don't want to be caught against the BO by trading both ways.Always trade towards most likely BO direction.**Should this occur your range trades will become even more profitable trend trade!!!**

Look at EA chart

CJ

Its important you guys realize I don't know the outcome of my trades.I know my system has the Edge based on thousands of trades by now however I don't know if its a winner or loser until it shows its hand.

This is pure probabilities. CJ could be a loser or massive winner however out of 100 trades based on my system you will have very high percentage of winners.

Please don't ask if its good or worthy of a trade.I don't know and there is no way for me to know the future.

I play the Edge over series of trades.That's all.

{quote} yea my friend ,i already enter ..your pivot is great like you... {image}

good luck with That. Yen has been very strong lately and part of it scared money running for shelter however USD is starting to wake up. BOJ wants weaker Yen and basically entire Japanese economy is depended on weak yen.I believe if it gets too strong BOJ may start dramatic steps to weaken it.

cheers

Impressive thread, I've been wondering if you could make a dashboard like the screenshot below to show all the 100,78,23 S&R levels {image} {file}

please stop right there.I don't want any dashboards! Its not about only pivots but PA as well and Its not hard to LOOK at the charts.

Try posting your trades instead of wondering how you can make a system idiotic!Too late on that

You are also **removed** from here! No offense but have not seen you trade my system but already trying to improve **on 1st post!!!**.Try drawing an apple before attempting a figure drawing !

{quote} Glad I stumbled across this thread, I have been trading a very similar system utilising murrey math lines, But I like these fibo points a little more.. Just one thing My angleator doesn't seem to display anything... Not that I need it, I can still work out a probable scenario based on price, but it would be a handy little piece of information to take onboard...

try installing my template.Its a common sense thing to do right?Or is it painfully difficult for you? Let me know

Had a great month so far. 20% gain of equity far exceeding my 10% goal a month. I also been more aggressive have taken more trades and increased my position sizes.

This has been gradual and took my years so don't try duplicate it. I mean increasing lot sizes. Everything should be done proportion to account size and available margin and experience.

I am looking forward to finish the month and going next. Cheers and make lots of 💰

Have still green trades that are still running. Should be spectacular month.

Don't forget to go over weekly calendar and mark important dates.

Feds rate is March 21 you might be thinking that's a lot of time. Well not really market usually starts positioning their orders early. Remember buy the rumor sell the fact.

Does not matter if Feds don't raise it important factor is from now until 21 market may act as though they will.

In basic terms rate or no rate will get priced in before the event. USD is starting to pick up so keep this in mind.

This creates the background the canvas tone. Everything you do should have certain awareness of this bigger picture. For example I would not long EU until it drops significantly and same on all majors. My bias is USD bull until March 21. This is my canvas that I am going to operate unless

File 22 - Davit's Posts on his Pivot Trading thread-2018-02-Pages-155

market proves me wrong.

I have already hammered NU shorts aggressively and she has lot more in her. To me sell the rallies apply

I am going to post my trades on NU in basic chart so you can see what I am doing clearly. Should be obvious. There are over 100 trades this month alone on NU vast majority in profit.

Earlier the month I screwed up shorting NU early (unexpected bearish sentiment on USD caught lot of traders off guard) but recovered it and actually broke even. Recovery is important as well. Showing this because I make mistakes as well.

Big thanks Davit for this system! You are not afraid that the system will stop working after so much people will use it? 😊

no because no 2 people trade exactly even on same system. In greater scheme of things retail traders are drop in the ocean collectively. Forces that move price are far far more resourceful and powerful.

We only provide liquidity to fill their orders hence why spikes occur.

Don't know if any if you watch for missed central pivots, but there's a weekly pivot from the week of 2/11 on G/J at 151.635 sitting there as a pretty target now that price is coming up off of a low.

Just in case missed pivots are a new concept to some of you:

<https://tradewavequant.wordpress.com...ts-as-targets/>

Handy indicator for daily, weekly, and monthly central pivots and highlighting missed ones.

Thanks for your contribution.I don't trade GJ and **I don't trade missed pivots**. I did read the links and Not what I do.I prefer not seating on trade for 2months just to hit 75% chance of hitting missed pivot.Not even touching fees on swap which can pile up fast eating any chance of profits.

- 5% of the time a missed pivot is hit in under 5.4 days.
- 25% of the time a missed pivot is hit in under 8.6 days.
- 50% of the time a missed pivot is hit in under 17.3 days.
- 75% of the time a missed pivot is hit in under 52.5 days.
- 95% of the time a missed pivot is hit in under 493.5 days.
- The least number of days required to hit a missed pivot is 0.041 days.
- The largest number of days required to hit a missed pivot is 3099 days.

Again to reiterate when I trade crosses I always look how majors are doing
AC is basically AU+UC
Difference is manifested on AC

UC looks like aiming to R38
AU same next is S38

Hence why the price is in limbo on AC

Look for EA to drop below 57 again its in a range

In my book Range situations are best for trading. Get in get out repeat. This is most feared by trend traders but I love range. To me its perfect to build positions

3 days. I don't just chase them willy nilly. Only when they're in the direction of the trend and a reasonable distance. (very calculated distance) Most recent was a daily missed pivot on U/J last week. OTM option was \$20 per contract and payoff was \$55. Better than 2:1 r:r fixed risk.

The stat ladder that guy posted was how long price took to come back to a missed pivot round trip from the time it was set which is not the same as intelligently using missed pivots as target opportunities.

Most daily missed pivots will usually hit the next day, in my experience.

Good probability. {image}

month is getting to close so be careful.Lots of profit taking which means Euro bulls may jump ship and dribbling this to 22 by tomorrow When this situations come up I focus on none usd pairs.Plenty of opportunities there
90 ADR Pair pushing 68pips in another day is very doable

Its obvious guys who pay attention and do put effort make money here.There is a pattern.People who don't put effort and prefer spoon feeding don't make money and **get thrown out of here.**

BS will not be tolerated.For idiots asking questions let me enlighten you **there is search function on this thread** and chances are your questions have been answered more dozen times.

Closed another short on AC

{quote} Hello sir DAVIT. ANZ business confedence .aftr 6hrs

Correct 👍🎤🎄

[Quoting minortrader](#)

{quote} Hello Davit, This provides me an opportunity to convey to you my sincere thanks for all that you have done and continue doing to help the traders still struggling to be successful in their trading. Your forum is just Priceless. Regarding your question, at 7.00 pm EST today, there is a red label news out of New Zealand about the Business Confidence. Any major deviation from the expected figures could move the price significantly. As a precaution, I would reduce my exposure to the NZD pairs substantially, well before the news. Of course, your...

Correct 🏃

You welcome and thank you. I am short on NC and will continue on. In my opinion it will be green but will not have effect. That's just based on green data that came out yesterday on trade and right after NZD got sold off(see pic under). May not be same scenario however NZD is overbought in general and should decline.

The reason I asked because **I want everyone who trades my system to be aware about the events always!** This is most professional attitude you can cultivate in your approach to trading. You must know what's coming up so you make appropriate decisions. Should become second nature.

When I say I hummer swings and trends AC today is good example.
I got in took profit waited for bounce and hummered it again took profit and got in again.

File 22 - Davit's Posts on his Pivot Trading thread-2018-02-Pages-155

I basically maximized my profits.

Did the same all month on EA and NU

So its not about trading 30 pairs its finding few good set ups and sticking with it until its no longer any value left. I took today 30+trades on AC but someone else could of taken 30 trades on 30pairs.In my view I have better edge because I am focused on miking 1 pair with 30 trades.You guys understand correct?

Find good set up and build positions

Recruit did it on NC and NU real well and the guy just started trading my system 🙌🍷

Good job friend. Its important we distinguish points VS pips. A pip is 1 standard lot. I usually mention just points or just put the +number

By saying 350 pips you are saying you made \$3500 today which is very unlikely.

Thank you and keep up the good work

[Quoting zen252](#)

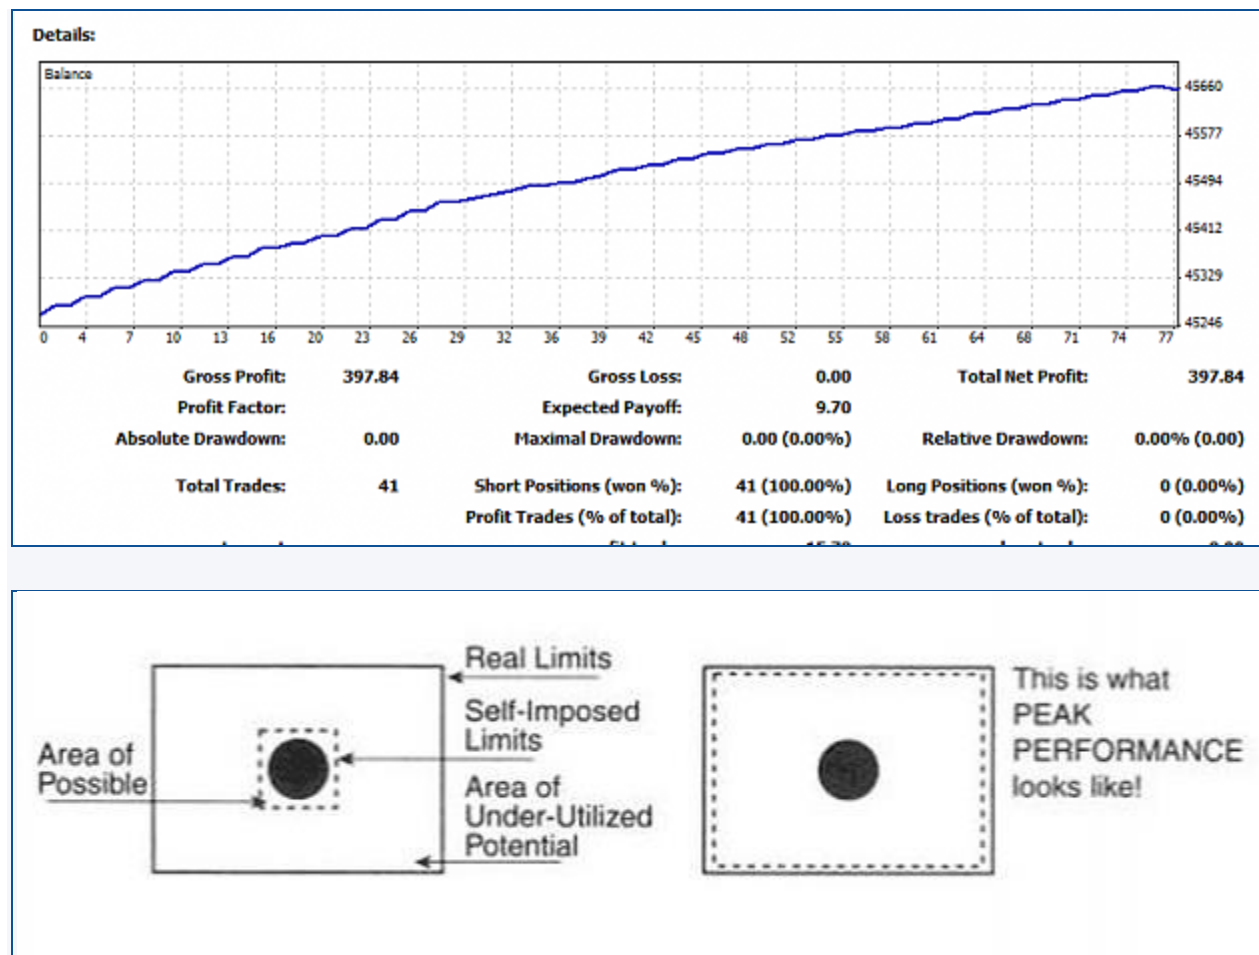

{quote} Davit..... been looking at your post and I notice your saying moves of +459 pips but do you actually mean mini (or Micro) pips as the currency has moved 4.59 cents . What it has done is moved 45 pips.

I didn't say pips and you are directly quoting me.... Its 459 points which means nothing in a way because what counts is actual \$\$ % If you place 20 10cents mini lots and show gain of 1000 may look impressive but in actual \$\$ made very modest gain.

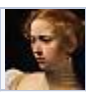

I usually post my actual gain stats in real \$\$ amounts here periodically.

Today I made \$397dollars not bad.In real terms I made basically 40pips today.That's without stress or worry!

Quoting Jester 73

Dear Davit I wonder if you can give some advise. i have been searching the thread for at least 10 hours but I have not seen an answer to my question. In your first page you state that risk/position size management is based on the swing. One basically determines how much one can afford to risk and divides this amount by 10 (10 entry bullets so to speak) to ultimately determine the lot size per trade. I struggle with the following. Is the swing size made up by the pivot points? For instance assume I want to short my first position from the R61, would...

Hi Jester

Welcome! I commend you for earnestly trying. As you noticed I trade more or less 100 ADR pairs and stay away hyper pairs and this give me parameter about the swing. Swing is determined by particular pair sometimes its 38 to 38 other times 100 to 100 or 100 bounce of 38 then head back to 68. What I mean is each situation is different but by average ADR should give you an idea base sort of.

Try trading smaller than normal until you feel confident what you are doing.
regards

Hi Guys

Don't think I am going to do anymore trading today so posting my results for Feb 2018

This has been a spectacular month for me. I made highest profits ever in trading in one month over 8k which based on my account size is pretty impressive even to myself. Gain of 22% equity. 💪🍷🍷🏆💰💰💰
