BY
NAJMI FIRDAUS

BASIC SNR

5SOP MUST HAVE BEFORE ENTRY

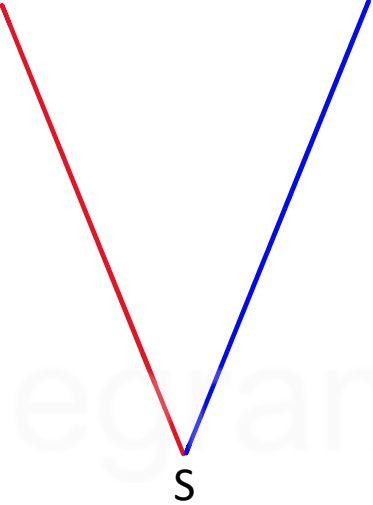

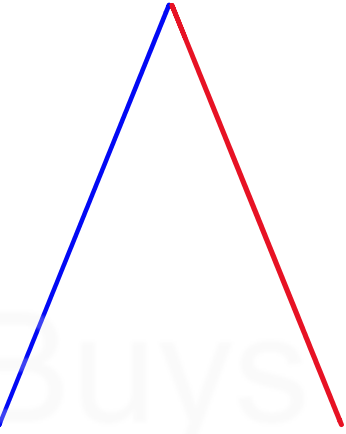

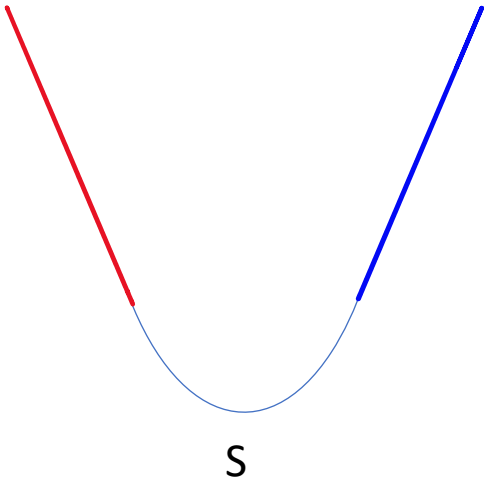

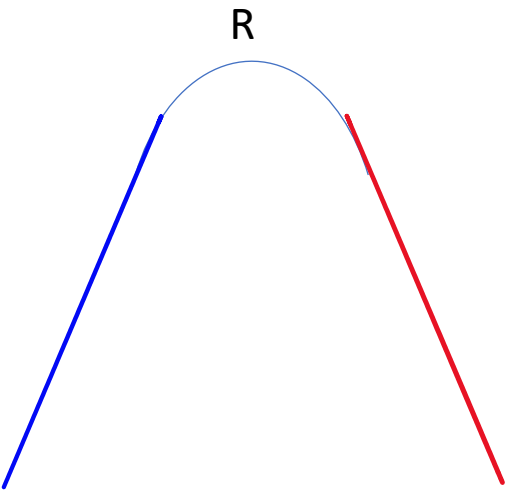

1) Zone

2) Rejection

3) Confirmation

4) Setup

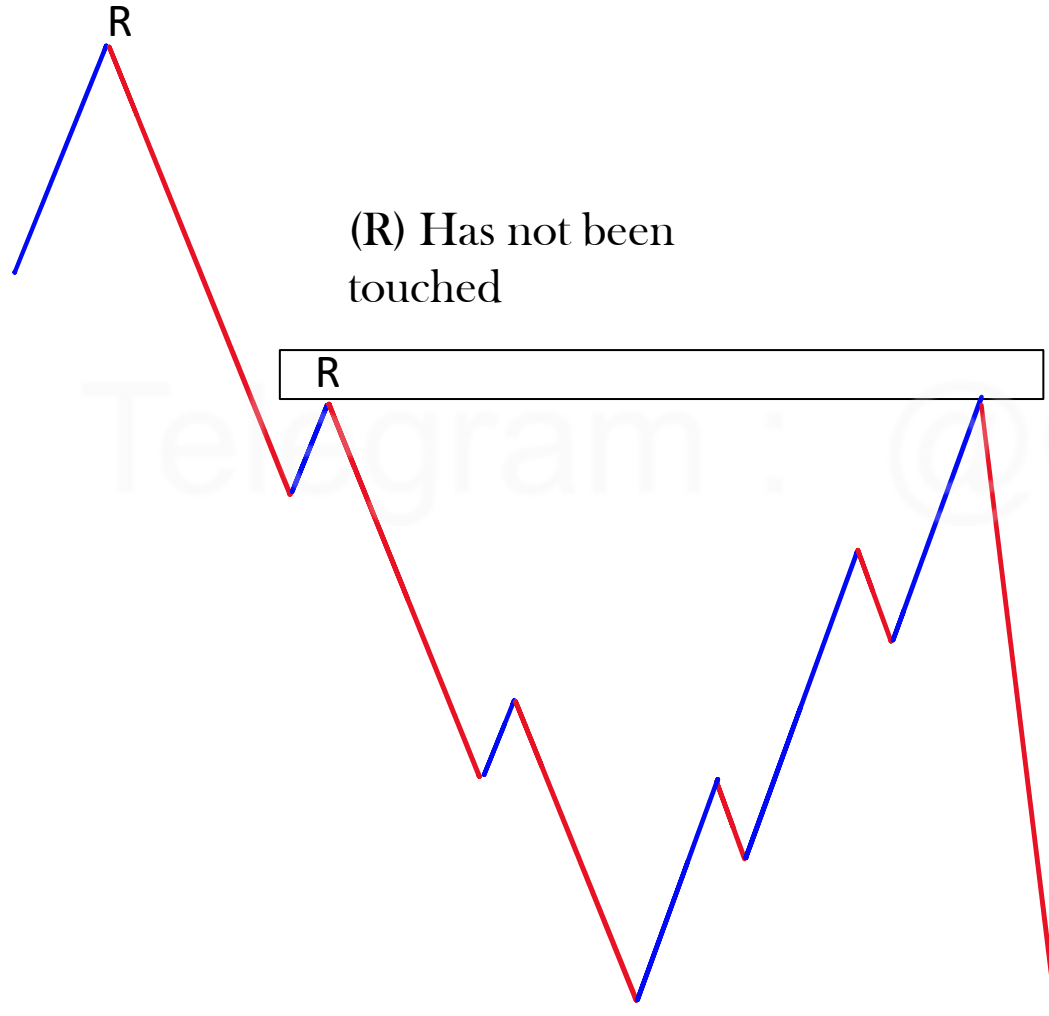

5) Entry

Support (Base)	Resistance (Top)
<p>Buy at support (S)</p>  <p>A V-shaped diagram representing price movement. The left side of the 'V' is a red line sloping downwards. The right side is a blue line sloping upwards. The vertex of the 'V' is labeled 'S' below it.</p>	<p>Sell at resistance (R)</p>  <p>An inverted V-shaped diagram representing price movement. The left side is a blue line sloping upwards. The right side is a red line sloping downwards. The vertex of the inverted 'V' is labeled 'R' above it.</p>
 <p>A diagram showing a curved price movement. A light blue curve forms a U-shape. The left side of the curve is a red line sloping downwards. The right side is a blue line sloping upwards. The lowest point of the curve is labeled 'S' below it.</p>	 <p>A diagram showing a curved price movement. A light blue curve forms an inverted U-shape. The left side of the curve is a blue line sloping upwards. The right side is a red line sloping downwards. The highest point of the curve is labeled 'R' above it.</p>

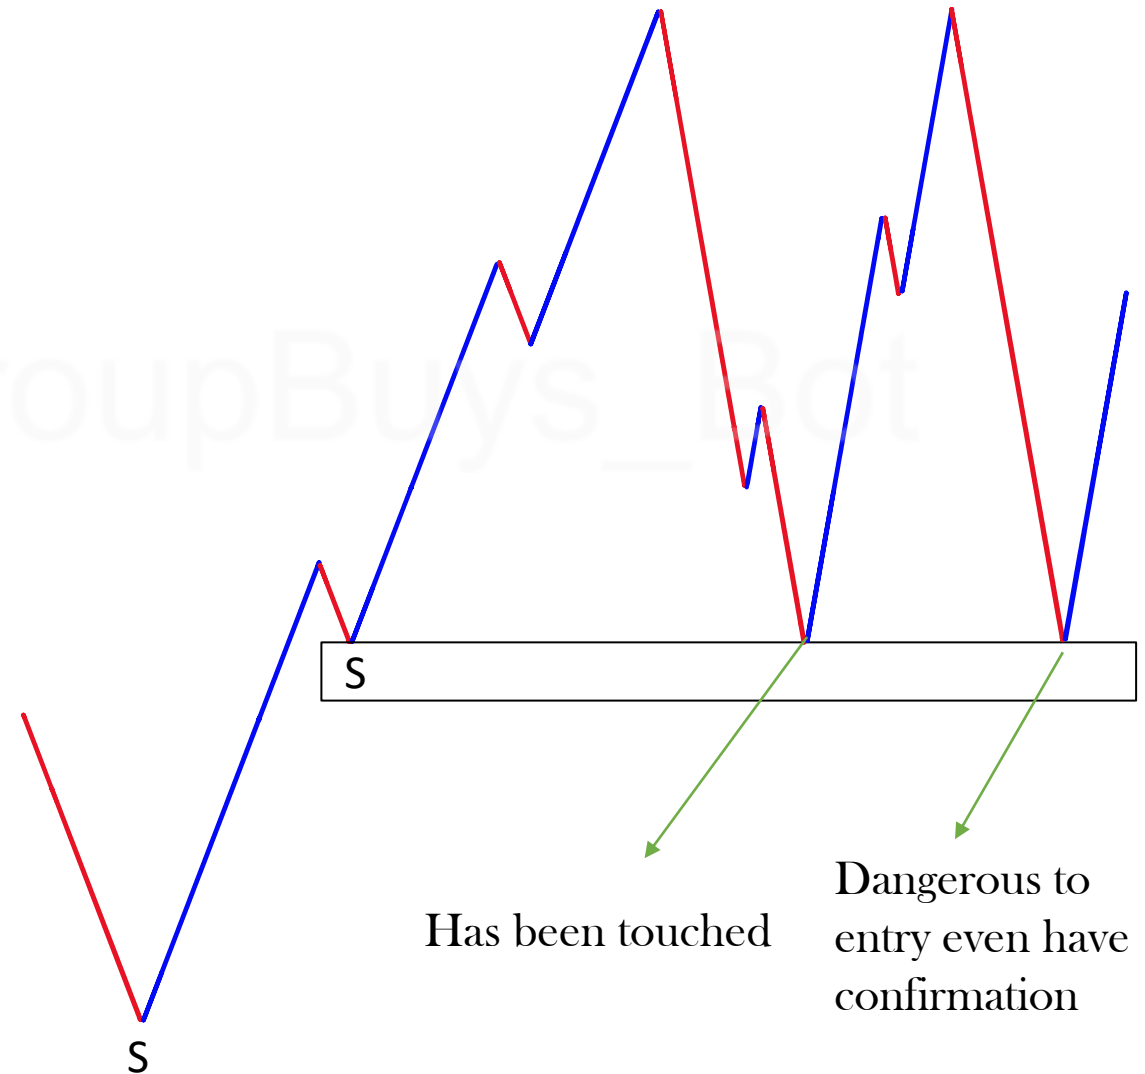

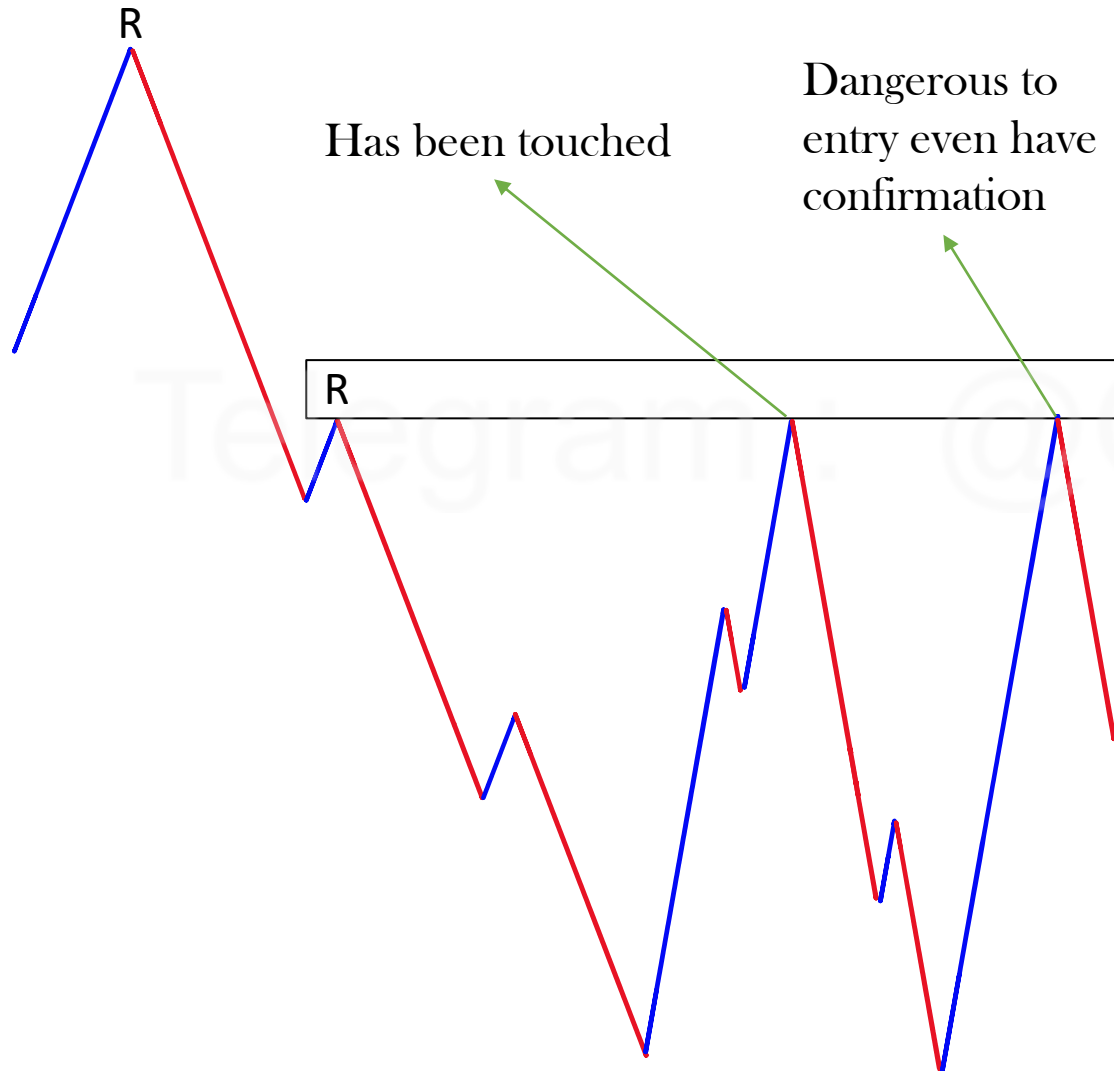

SNR LEVELS

- Price usually will play at the SNR Levels because at the levels will have order buyer or seller.
- When the SNR Levels has been touched many times, we have to be careful even we already have confirmation to entry.
- The more touched, the weaker that SNR.
- Because of that, we have to choose SNR that have not been touched.

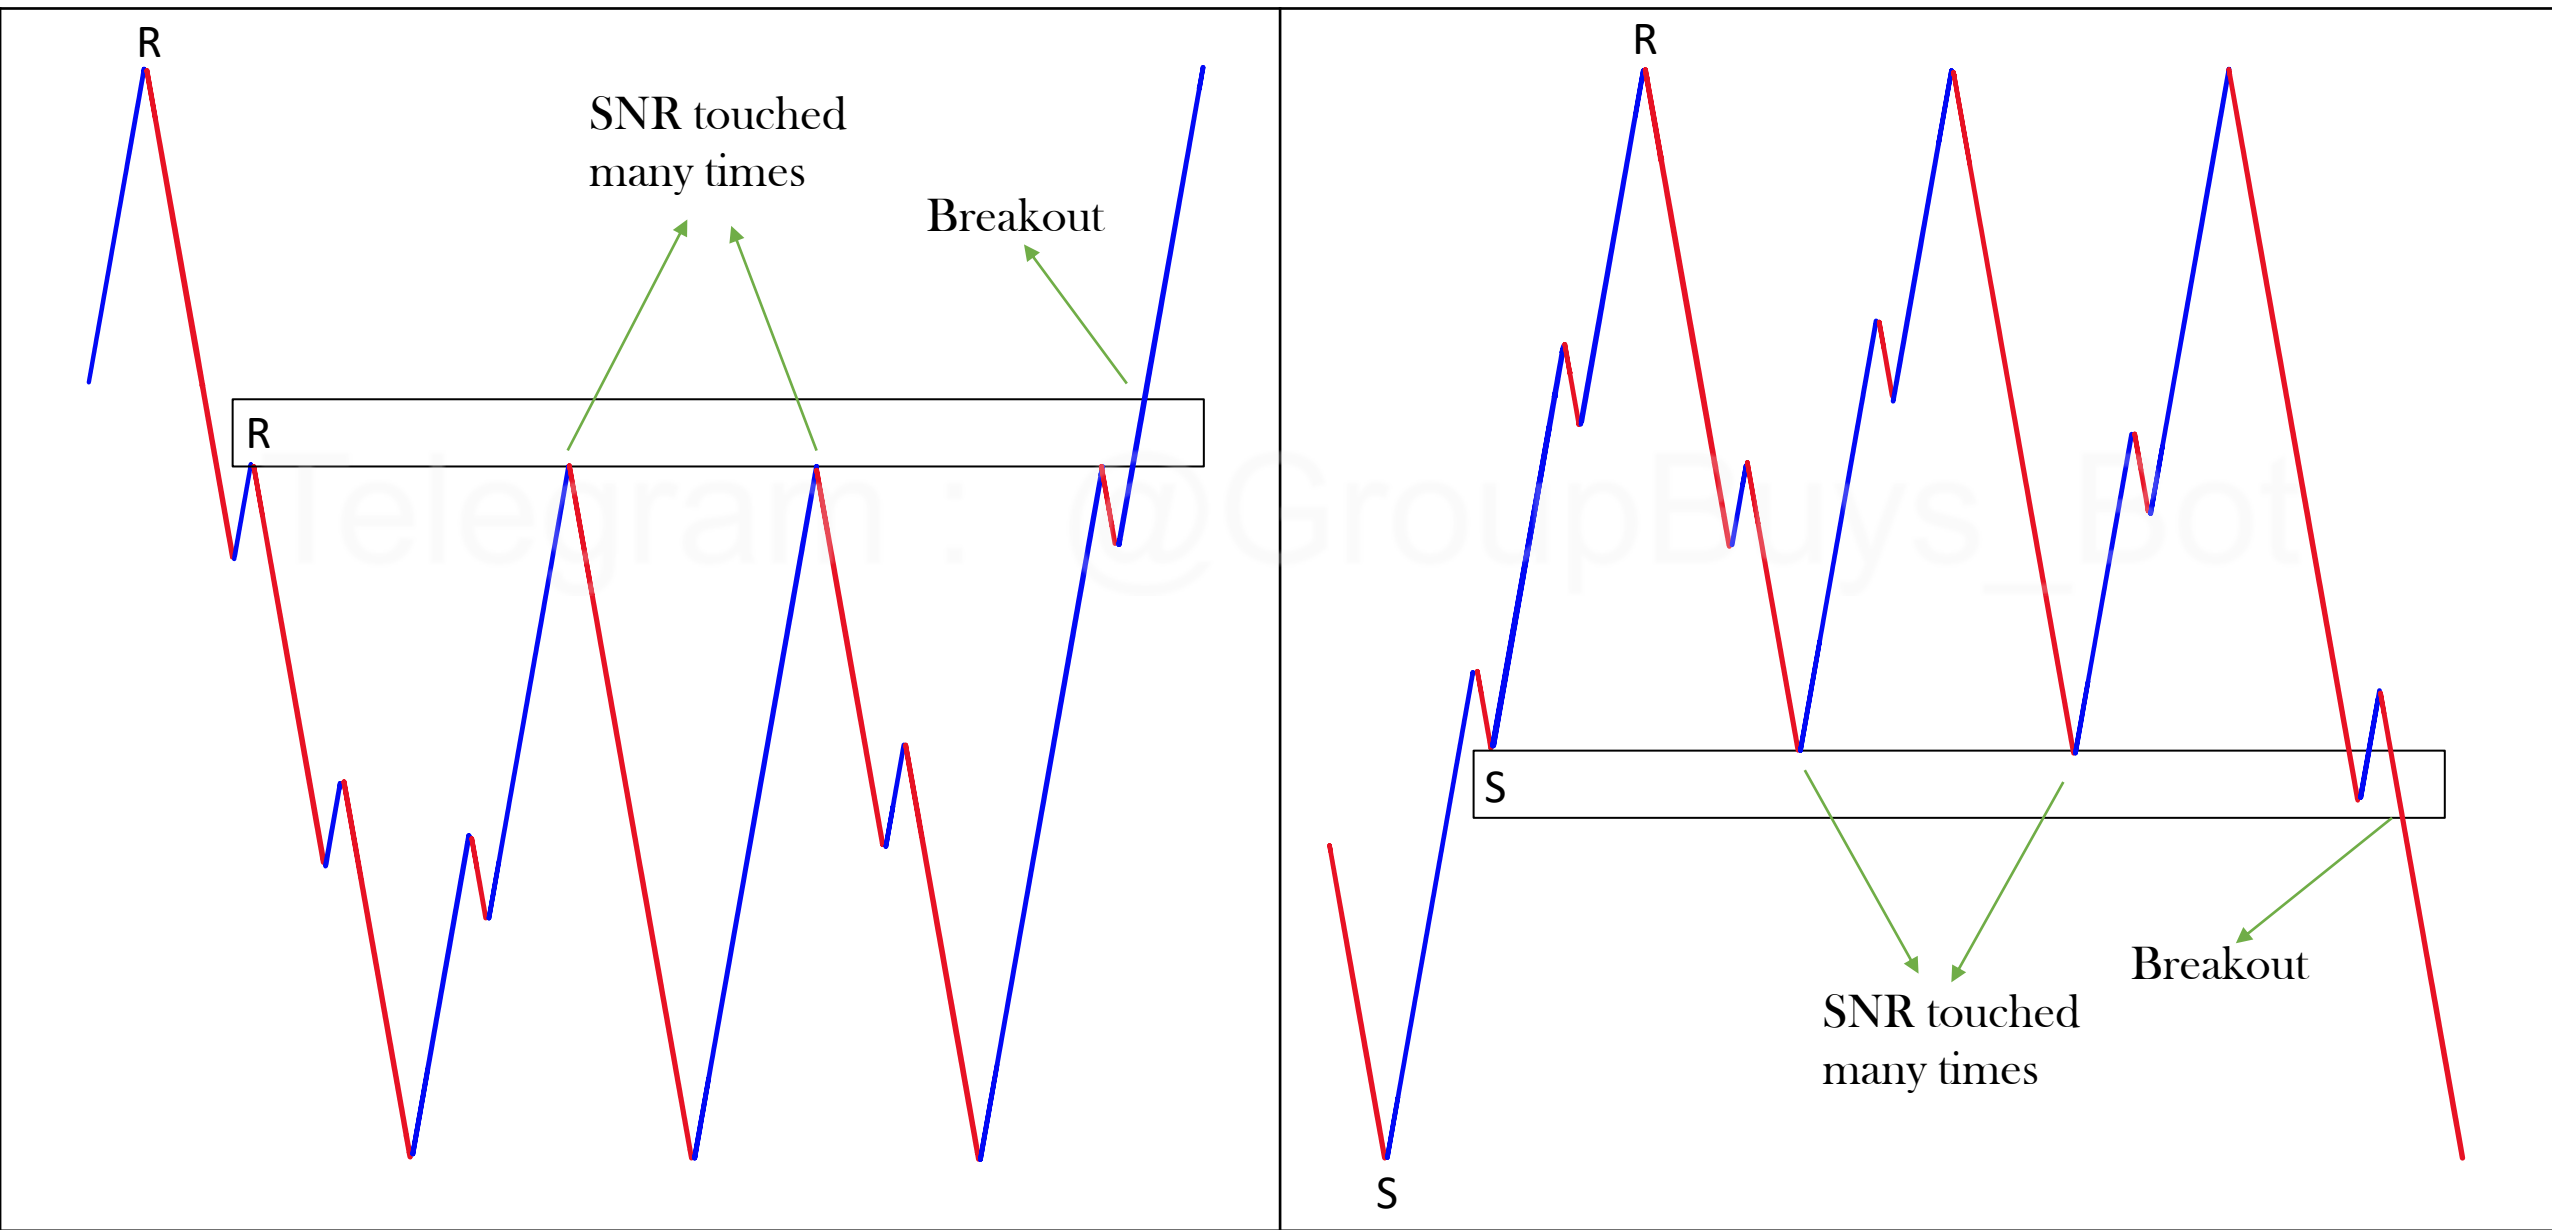

Example : SNR HAS NOT BEEN TOUCHED

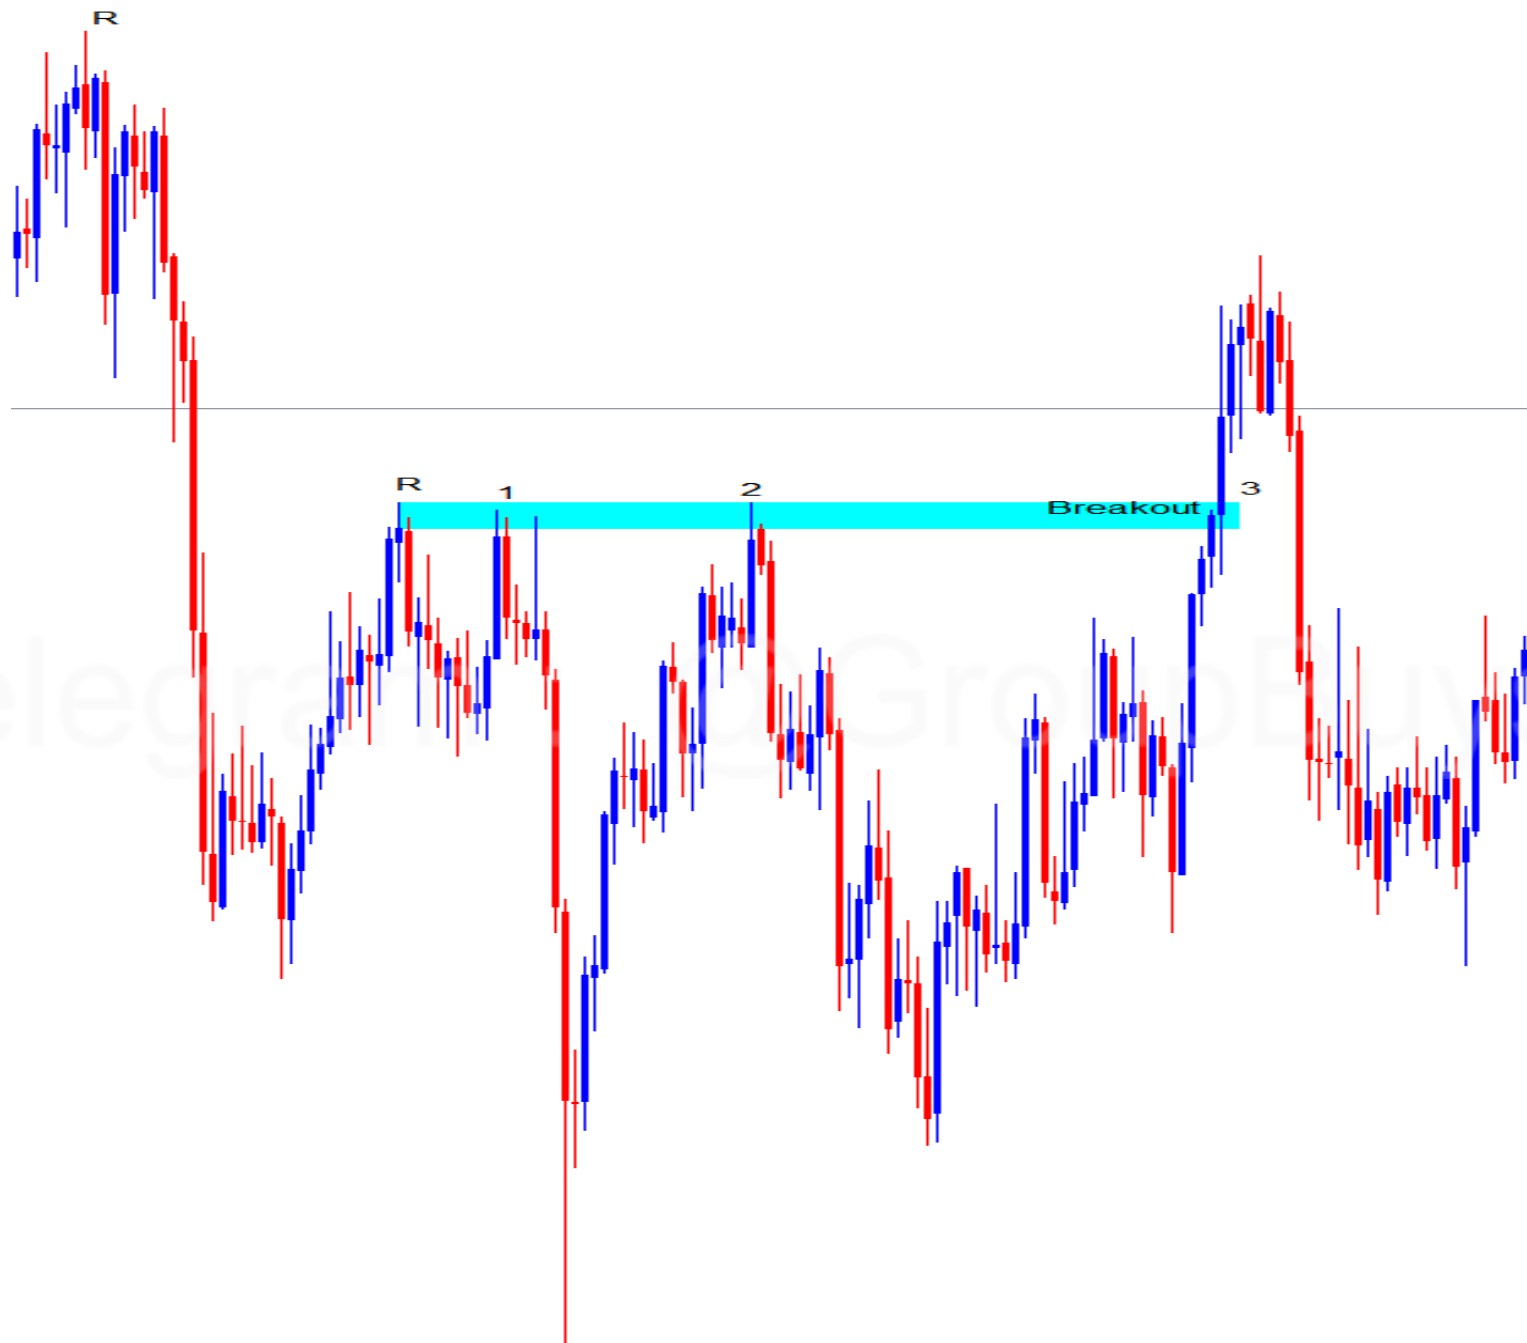

Example : SNR ALREADY TOUCHED

Example: SNR BREAKOUT TOUCHED MANY TIMES

Telegram: @2xGroupBuys_Bot

Telegram: @GroupBuys_Bot

THE RIGHT WAY TO USE SNR

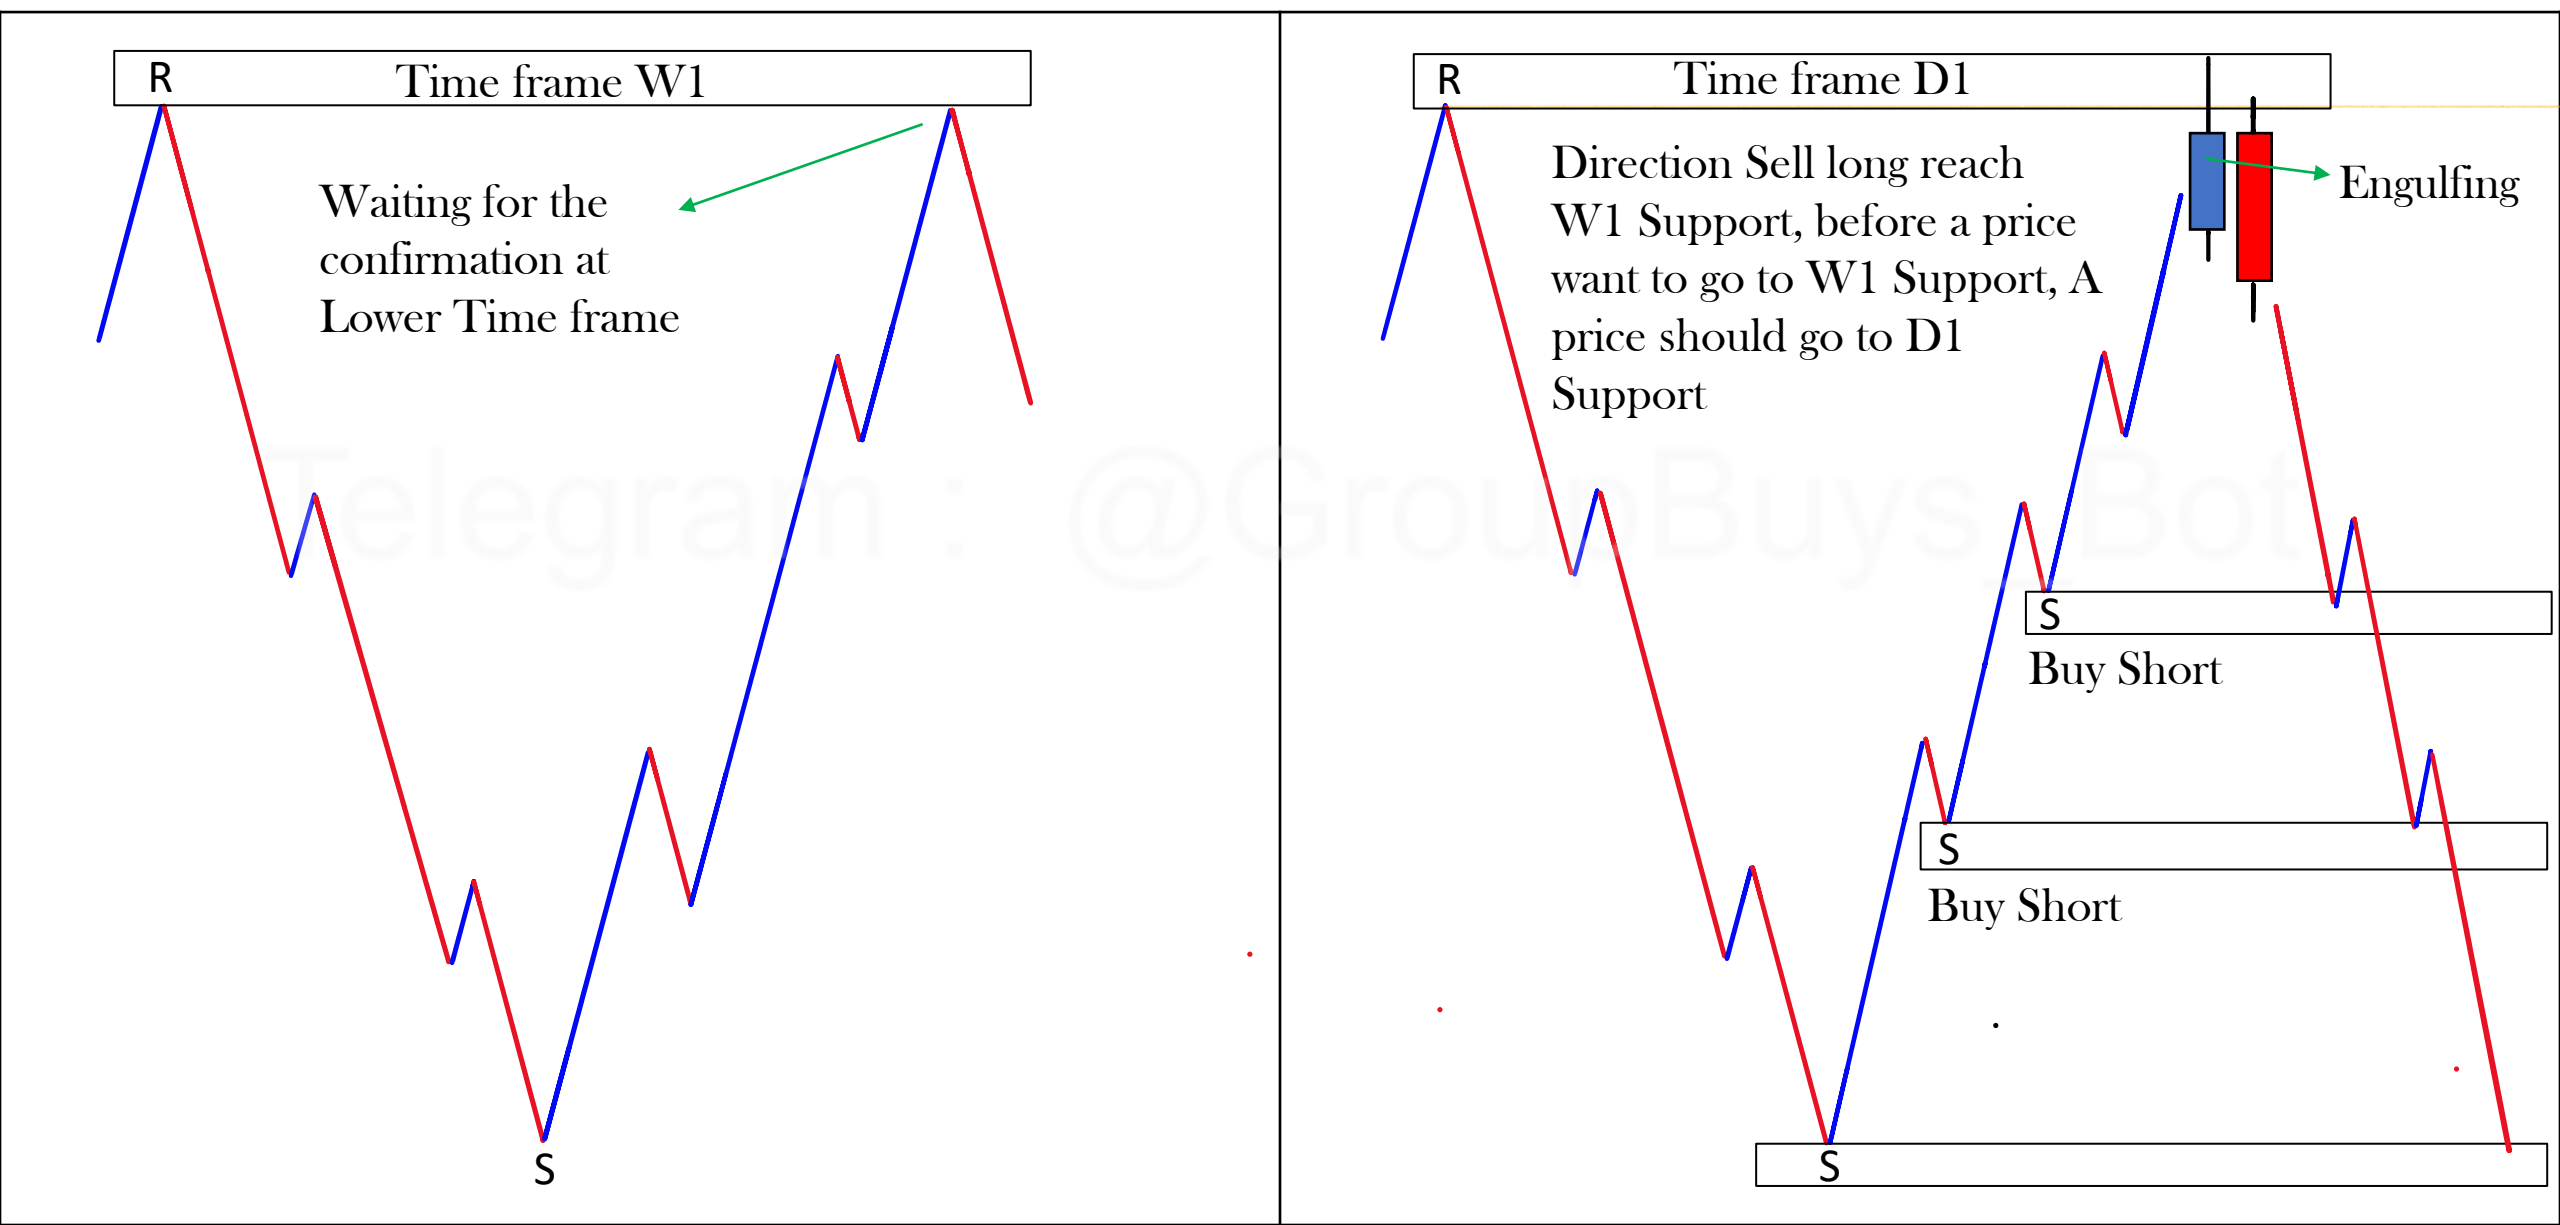

Telegram: @GroupBuys_Bot

- We must find SNR direction at HTF like (MN,W1,D1). As usual i will use the Time Frame W1. We will mark (Support & Resistance) zone at the Time Frame W1.
- After we mark Support & Resistance zone at W1, we will mark the zone at D1 because D1 zone will be the zone for (SHORT ENTRY).
- Only have two way for direction ;
 1. SELL LONG, BUY SHORT
 2. BUY LONG, SELL SHORT
- When a price go inside to the SNR zone, and how do we know that the direction is already changed to (Sell long, Buy short) or (Buy long, Sell short) ?
- If that direction changes, a price will make a figure of confirmation engulfing.
- How much that we should engulfing at the time frame?

Example : TIME FRAME

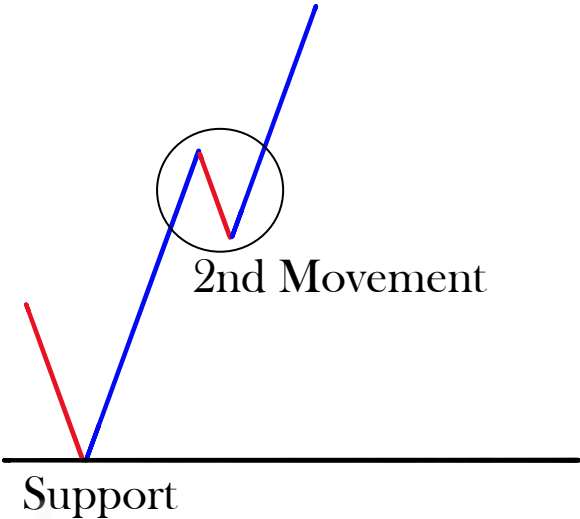

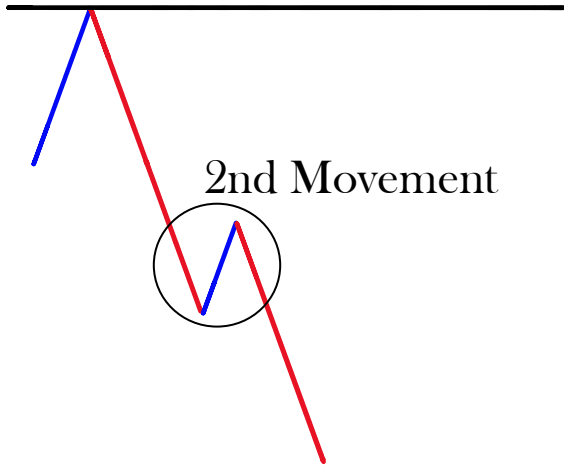

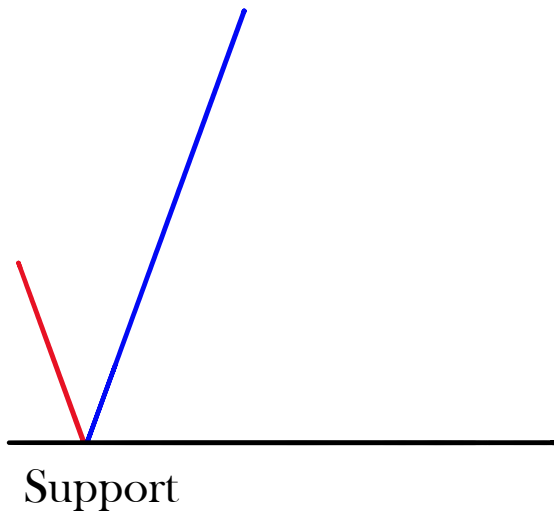

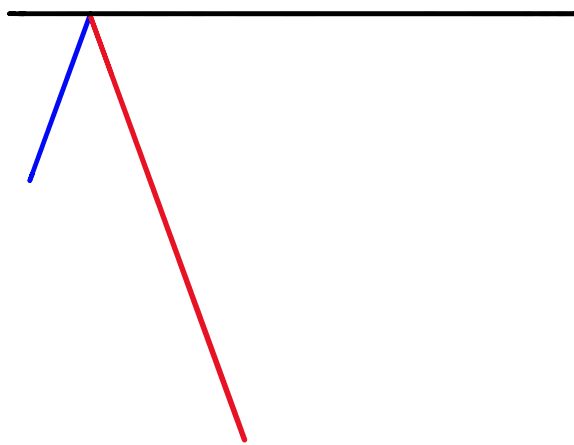

Zone	:	D1	W1	MN
				
Confirmation Engulfing	:	H4	D1	W1

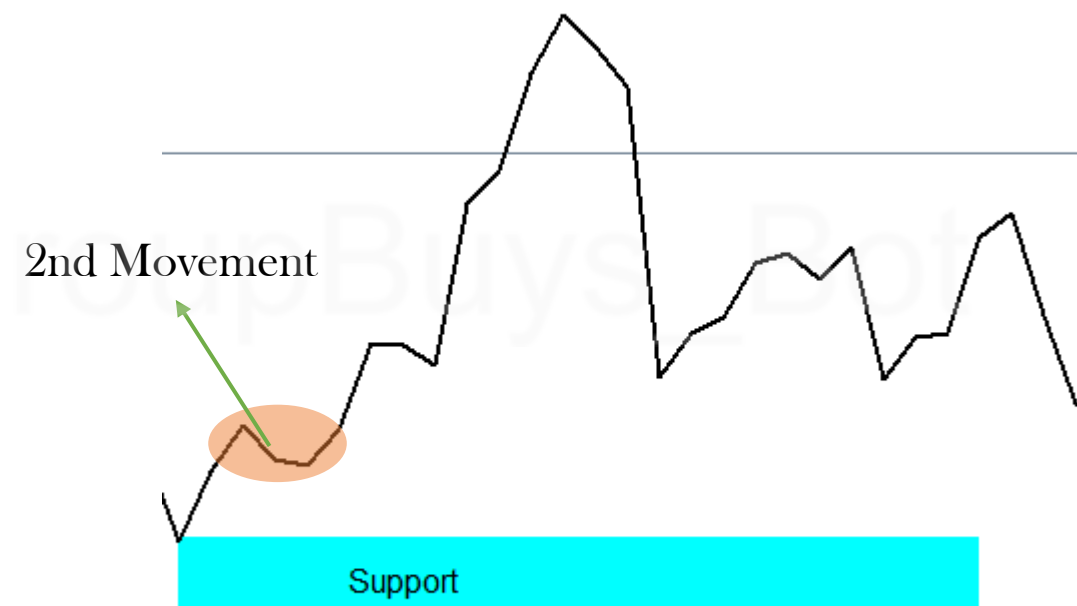

Example : SELL LONG, BUY SHORT

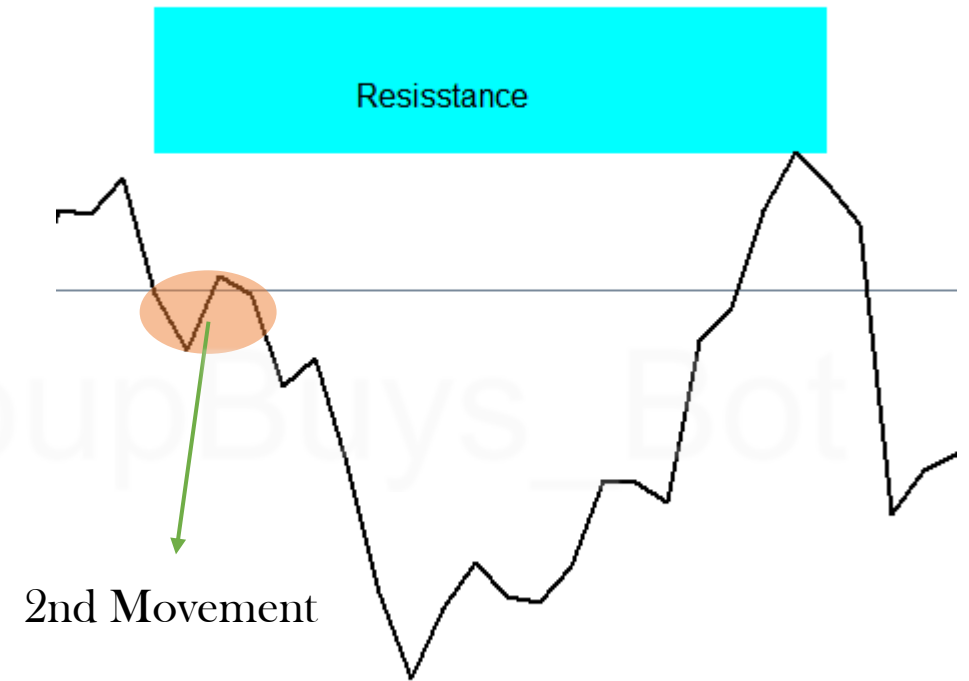

THE WAY OF MARKING SNR AND 2ND MOVEMENT

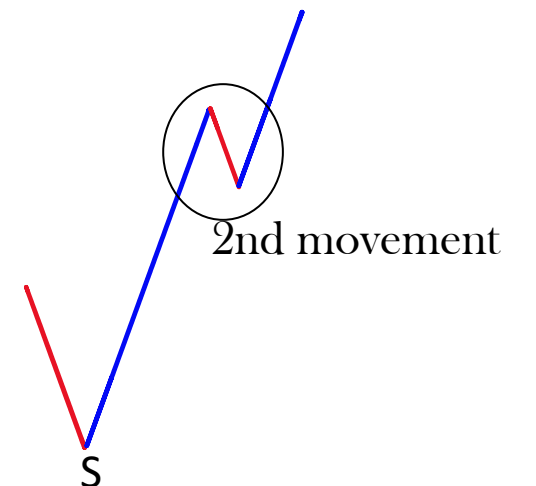

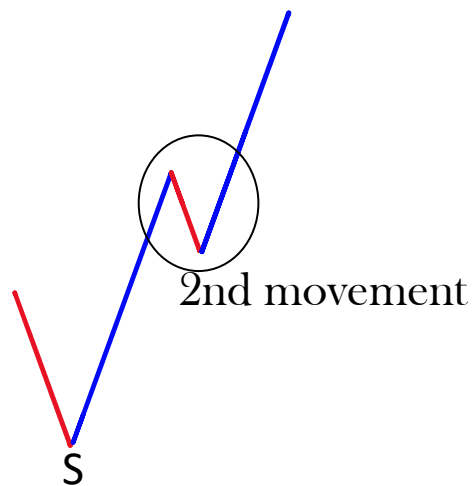

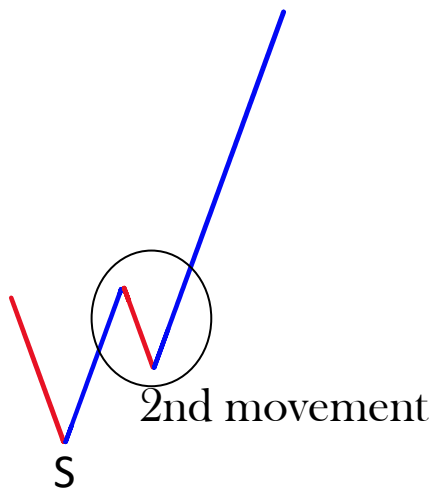

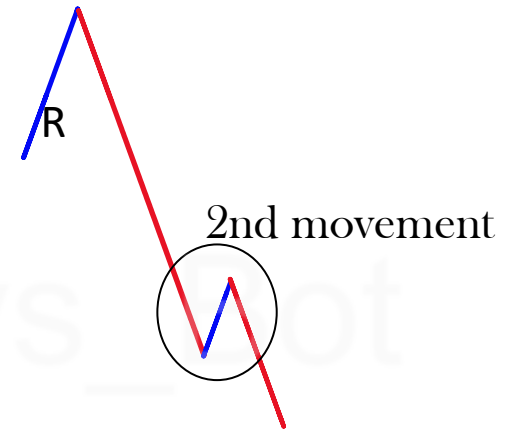

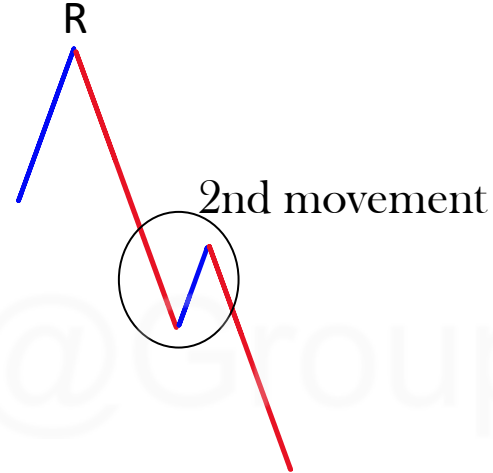

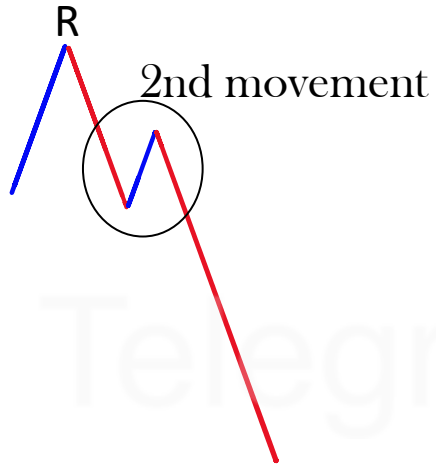

- We need a 2nd movement because that will help us in terms of marking the right SNR.
- So that we didn't choose a dangerous zone or we choose the zone the end of the trend.

<p>Example : The zone have a 2nd movement</p>  <p>The diagram shows a horizontal black line at the bottom labeled "Support". A red line segment descends from the left to a point on the support line. From this point, a blue line segment ascends steeply. A small black circle is drawn around a peak in the blue line, with the text "2nd Movement" written below it. A red line segment then descends from the peak, crossing the blue line.</p>	<p>Resistance</p>  <p>The diagram shows a horizontal black line at the top labeled "Resistance". A blue line segment ascends from the left to a point on the resistance line. From this point, a red line segment descends steeply. A small black circle is drawn around a peak in the red line, with the text "2nd Movement" written to its left. A blue line segment then ascends from the peak, crossing the red line.</p>
<p>Example : The zone don't have a 2nd movement</p>  <p>The diagram shows a horizontal black line at the bottom labeled "Support". A red line segment descends from the left to a point on the support line. From this point, a blue line segment ascends steeply. There is no second movement shown.</p>	<p>Resistance</p>  <p>The diagram shows a horizontal black line at the top labeled "Resistance". A blue line segment ascends from the left to a point on the resistance line. From this point, a red line segment descends steeply. There is no second movement shown.</p>

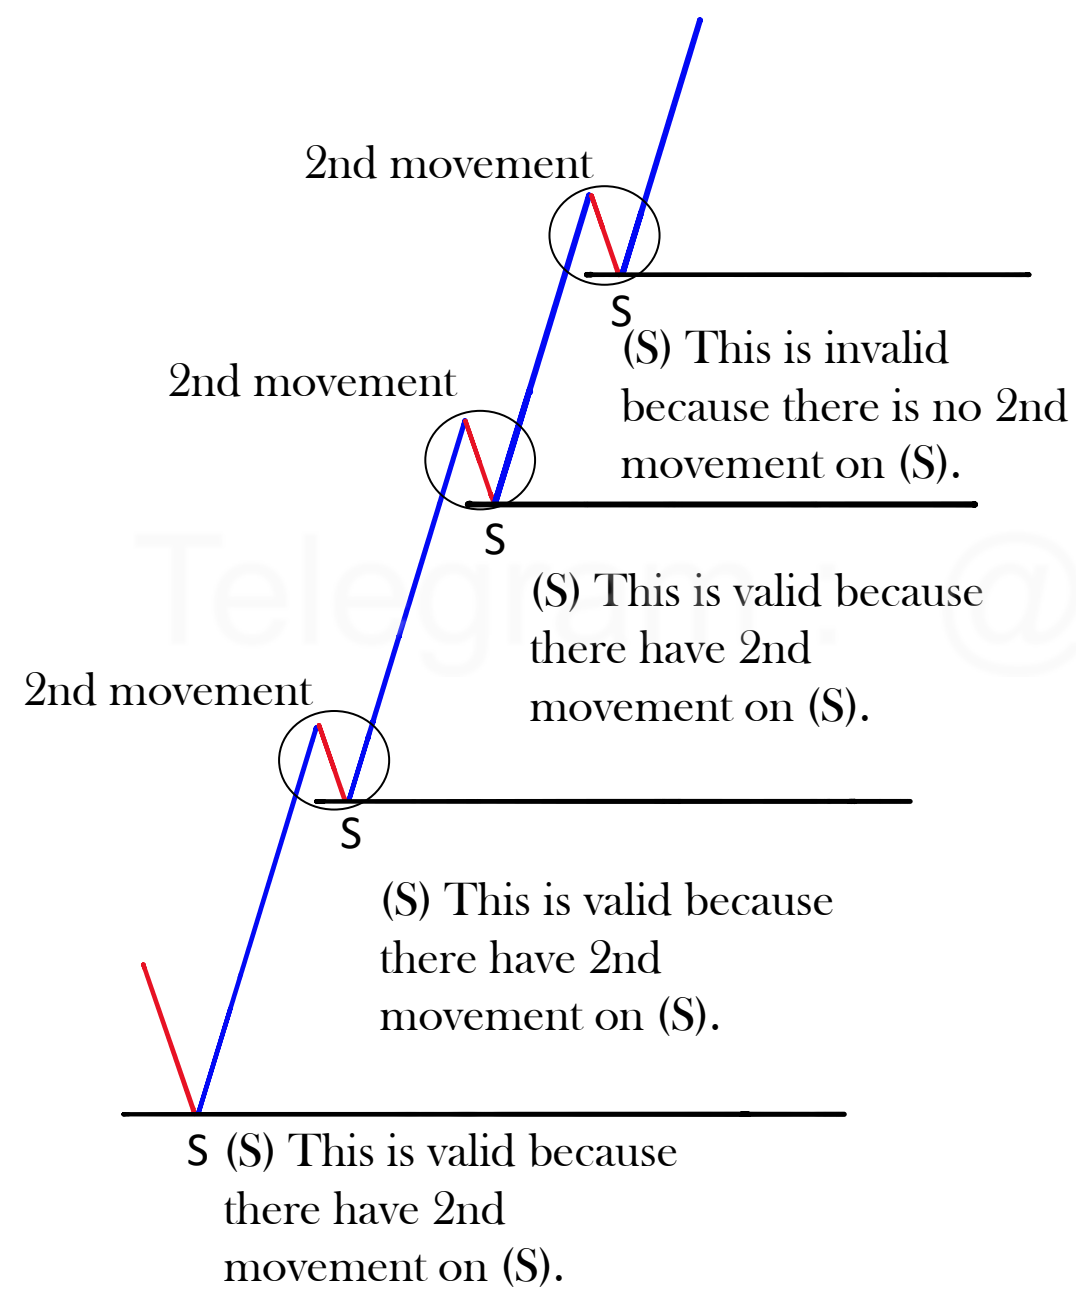

- There are many figure of 2nd movement in the market.
- For this 2nd movement will stay at the top/middle/bottom part. No matter where a 2nd movement is, the most important are there must be a 2nd movement and be seen clearly so that we don't confused to choose SNR zone.

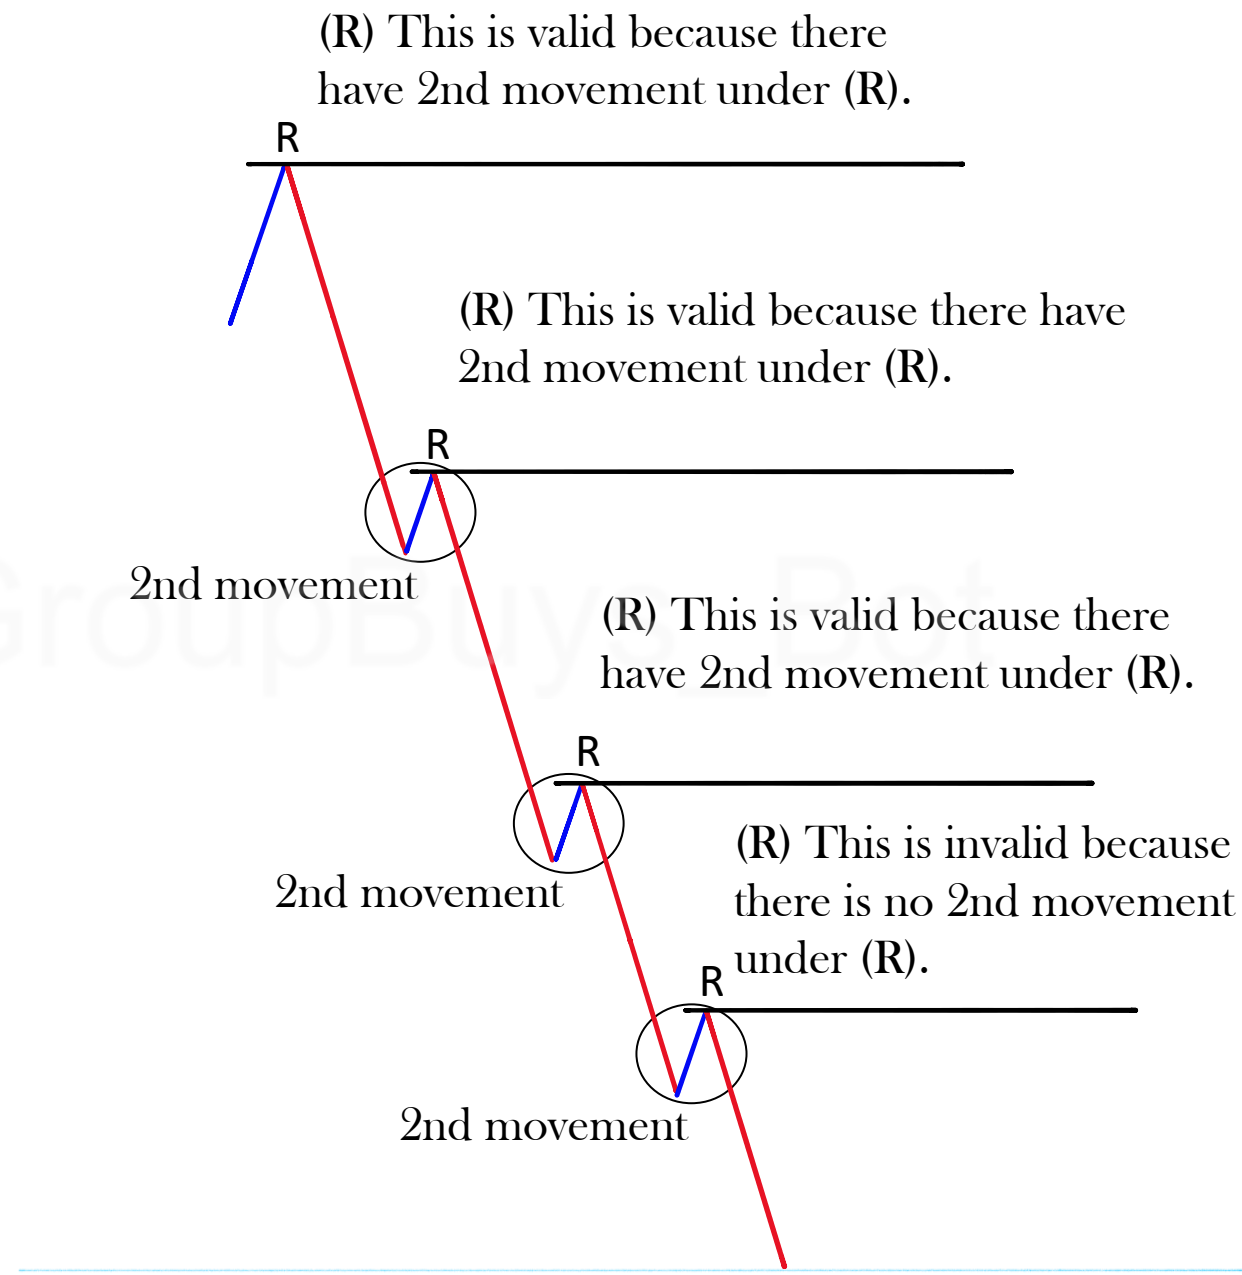

THE WAY TO USE SNR AND 2ND MOVEMENT

- For this 2nd movement different from the previous one because there are too many 2nd movement and which one we should choose to make a zone?
- To do the support zone, we should choose a 2nd movement starting from the bottom or the floor price.
- To do the resistance zone, we should choose a 2nd movement starting from the top or the roof price.

Example : Support & 2nd movement

Example : Resistance (R) & 2nd movement

HOW TO IDENTIFY THE SND (SUPPLY&DEMAND)

- Supply & Demand are confirmation.
- This confirmation will be divided into four (RBD,DBR,RBR,DBD).
- For RBR or DBD, we will make confirmation as a continuation.
- For RBD or DBR, we will make confirmation as a reversal.
 - RBR means the price want to keep going up.
 - DBD means the price want to keep going down.
 - RBD means the price want to change direction, from up to down.
 - DBR means the price want to change direction, from down to up.

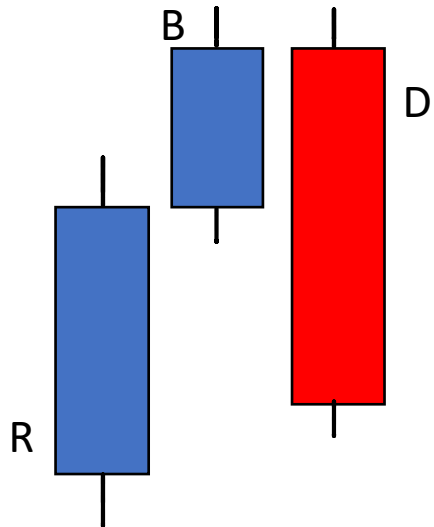

SUPPLY AND DEMAND

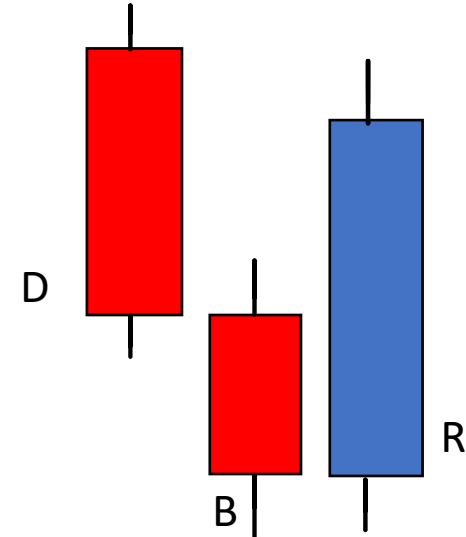

*DROP BASE DROP

*RALLY BASE RALLY

*RALLY BASE DROP

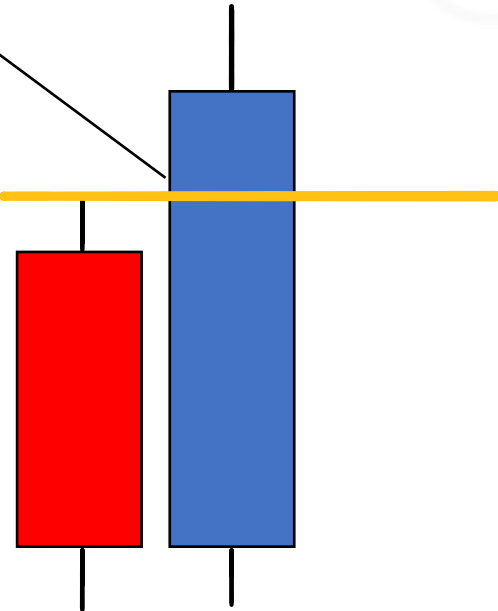

*DROP BASE RALLY

BASIC ENGULFING

- Engulfing is a zone or place “possible” zone buy or sell.
- Hidden setup is in two candle engulfing.
- Engulfing as a zone SND (Supply&Demand) too.

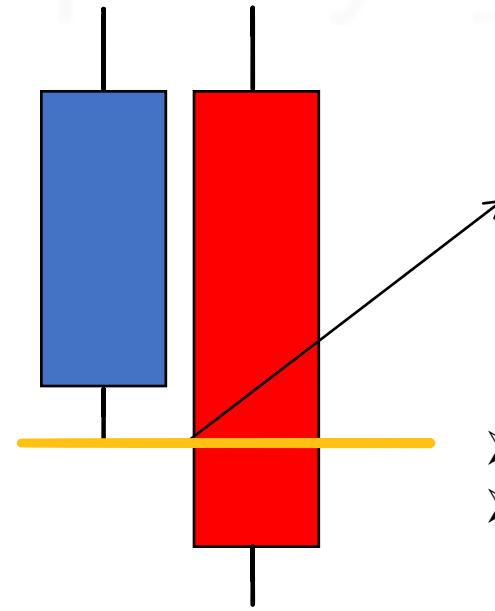

Blue candle should close and break shadow red candle

- BULLISH ENGULFING
- SUPPLY ZONE

Red candle should close and break shadow blue candle

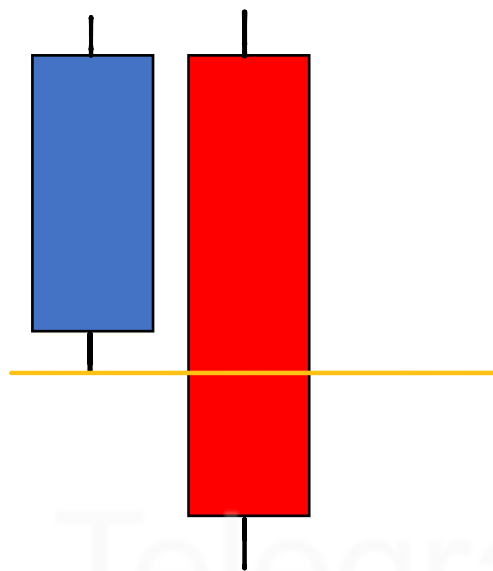

- BEARISH ENGULFING
- DEMAND ZONE

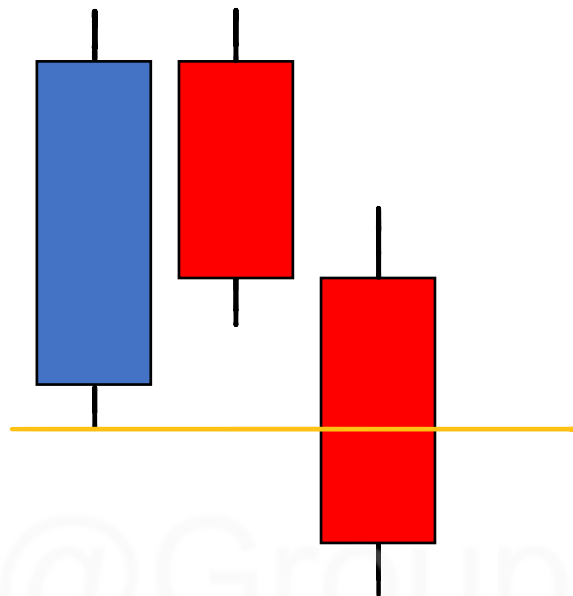

ENGULFING 3 TYPE

- In engulfing usually will have a hidden setup.
- Engulfing divided into three type, Type1, Type2, Type3 or called as (blank candle);
 - Type 1, one candle eaten by one candle.
 - Type 2, one candle eaten by two candle.
 - Type 3, one candle eaten by three candle.

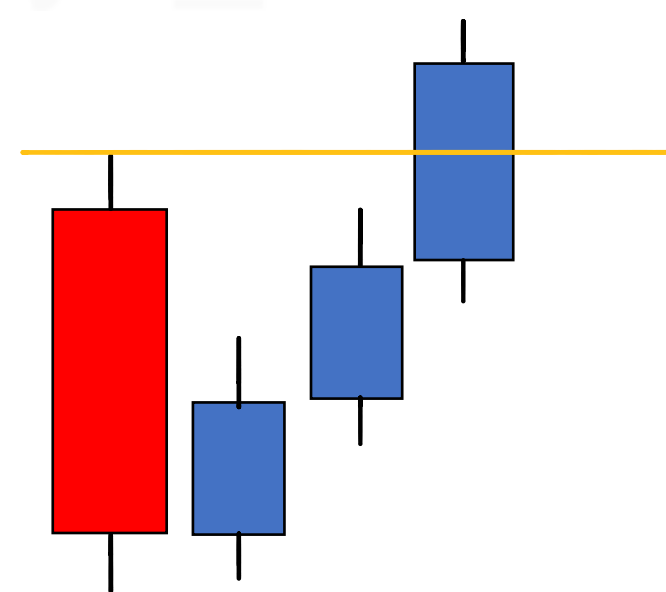

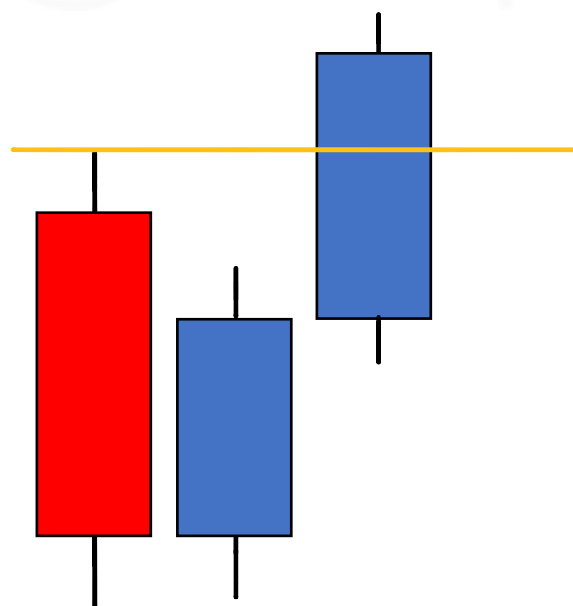

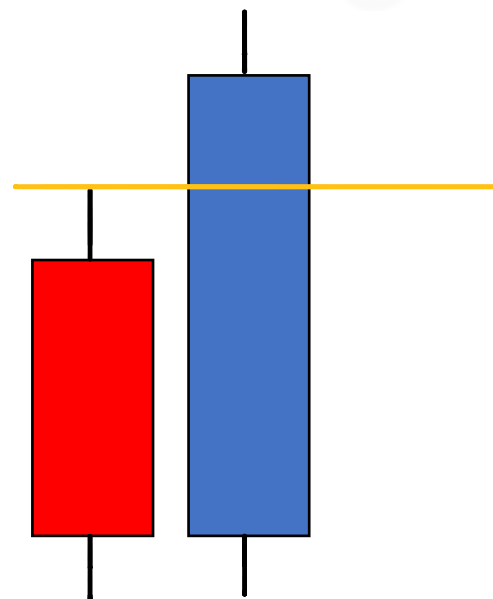

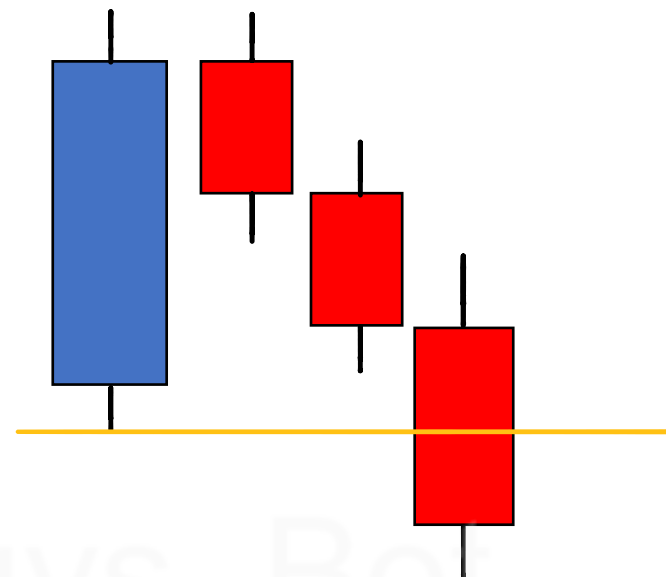

TYPE 1

TYPE 2

TYPE 3

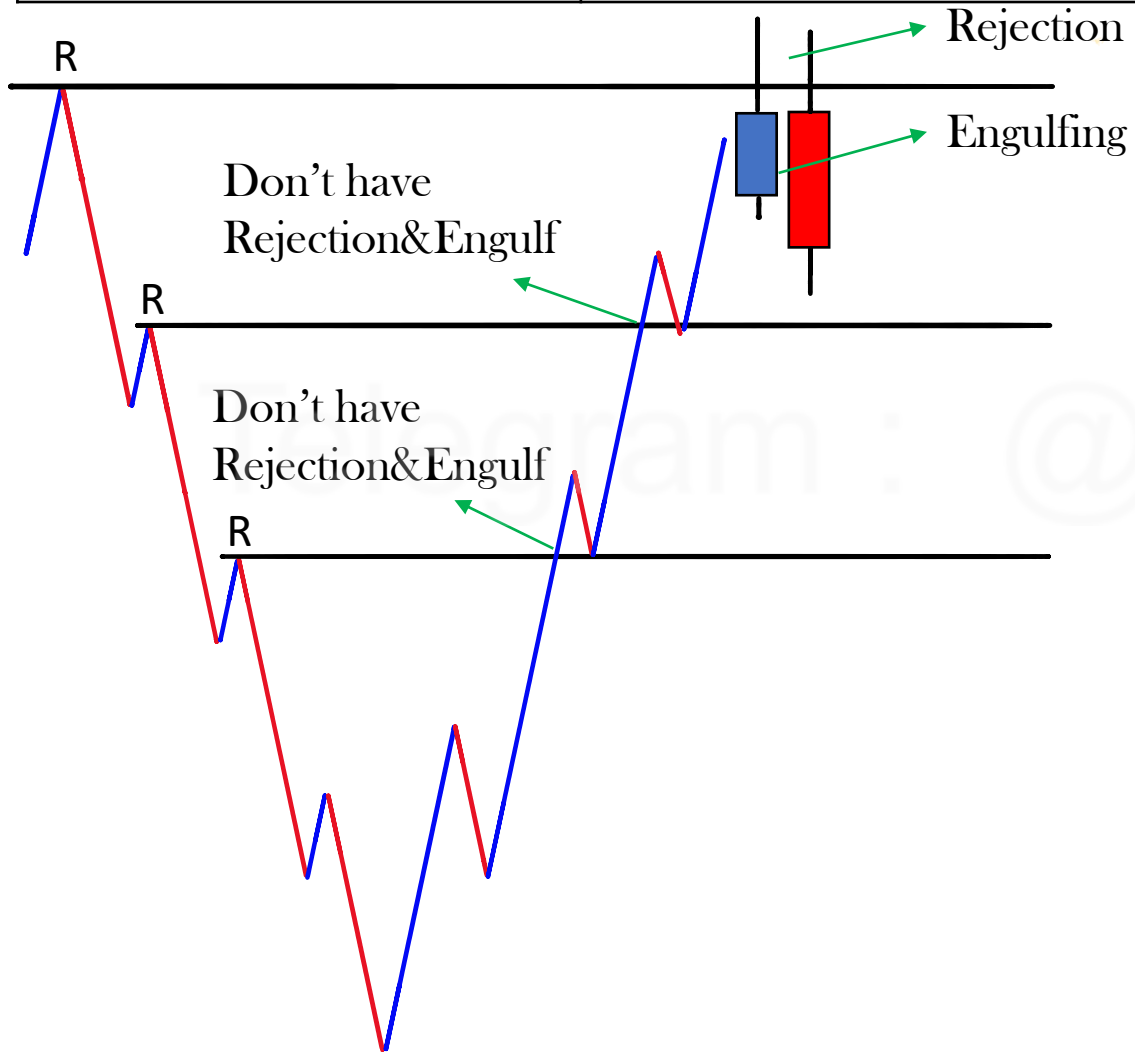

HOW TO COMBINE THE (SNR) AND (SND)

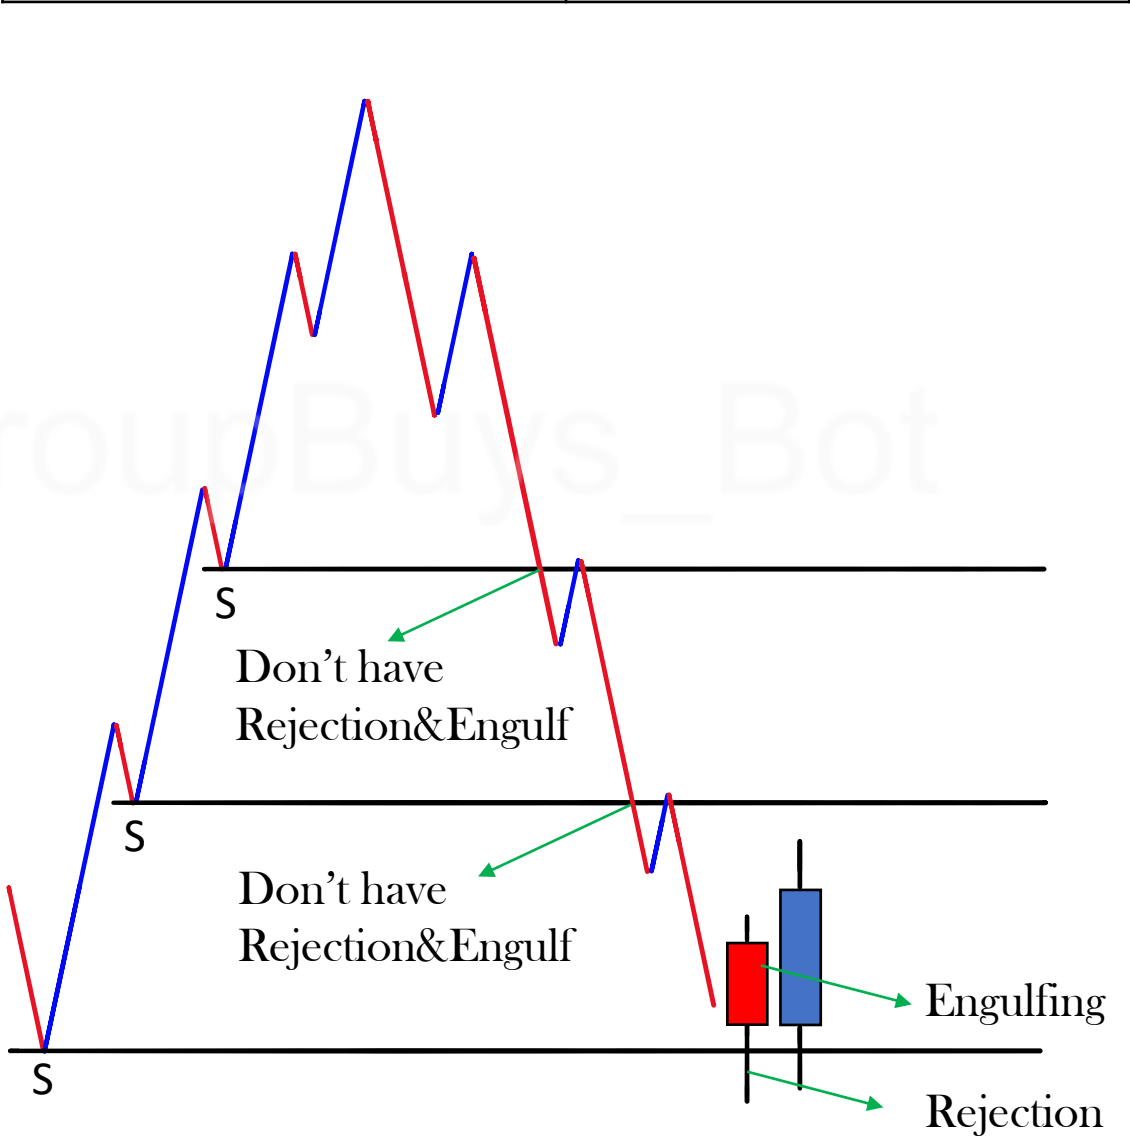

- For (SNR) usually will be on the left side.
- For (SND) usually will be on the right side.
- SNR will be used as direction, because in the SNR Zone will have a big order, but there have too many SNR in real market. So which one we should take?
- We will take SNR which makes SND when a price is in the SNR zone, like Rejection and Engulfing.

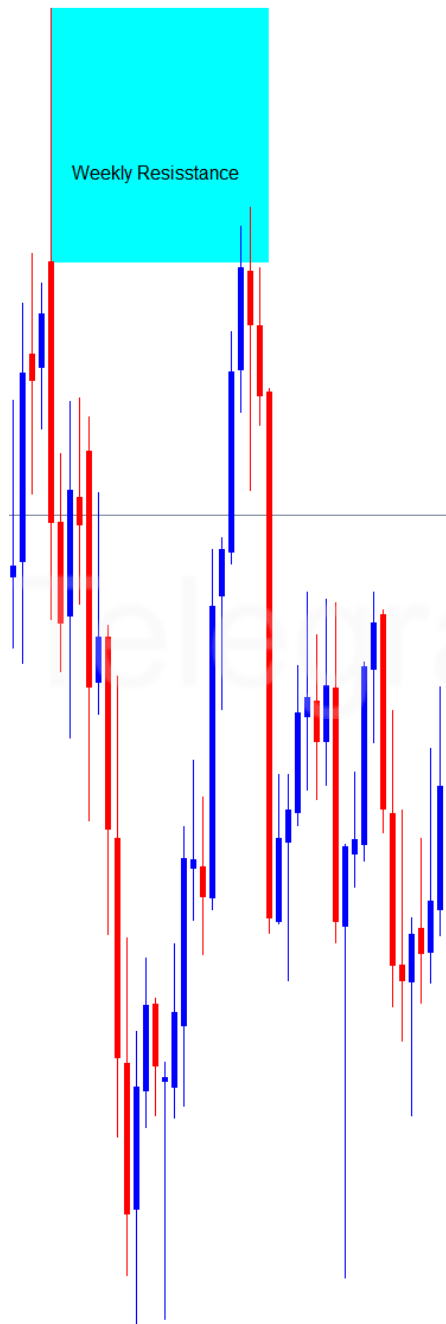

EXAMPLE : COMBINED SNR&SND

LEFT SNR	RIGHT SND
----------	-----------

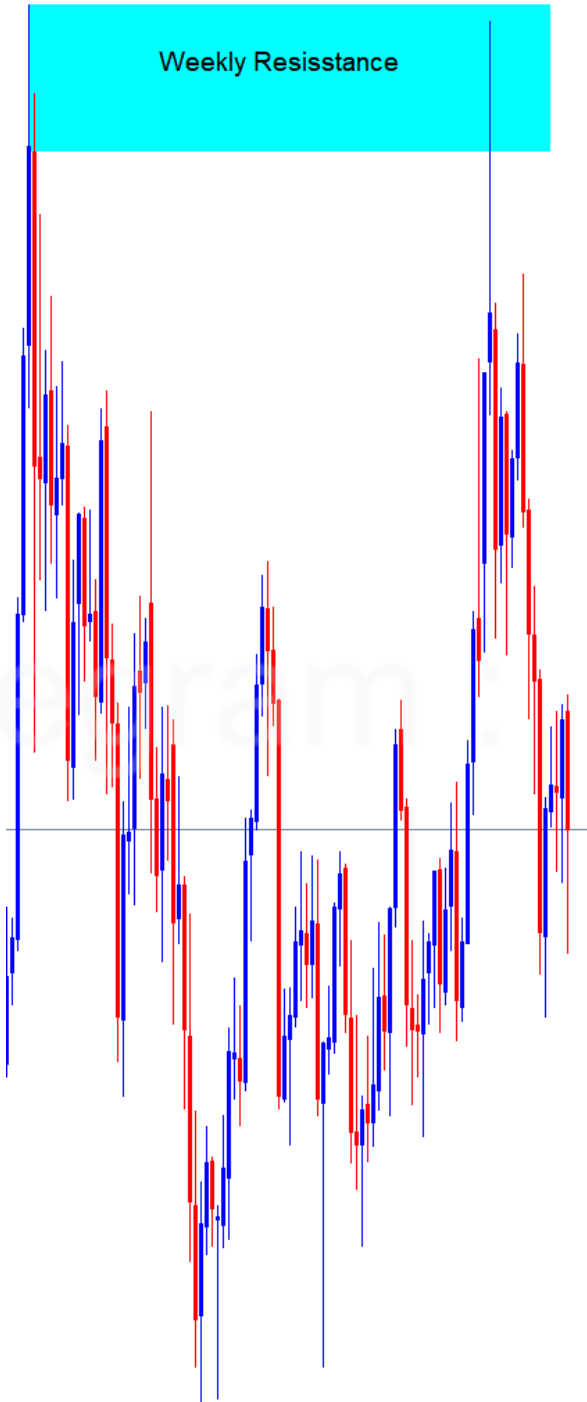

LEFT SNR	RIGHT SND
----------	-----------

SETUP ENTRY POINT

- 3 Reversal Setup
 1. Quasimodo Reversal
 2. Manipulation
 3. Blindsport
- 3 Setup Continuation
 1. Quasimodo Continuation
 2. SNR Continuation (i)
 3. SNR Continuation (ii)

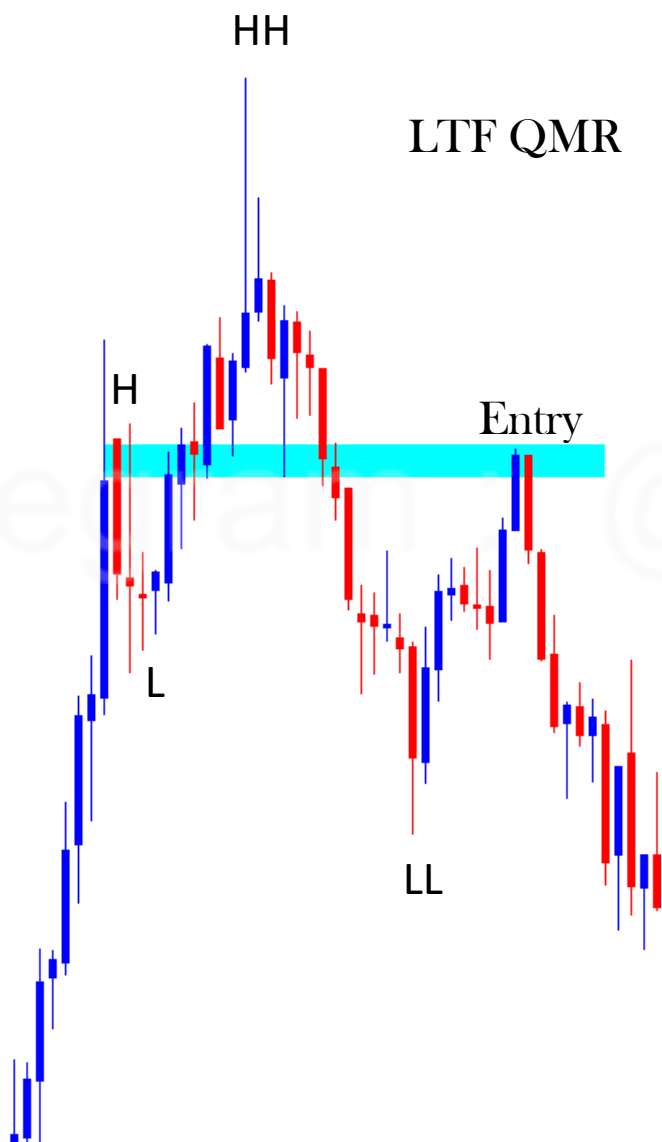

Quasimodo Reversal

- Quasimodo or known as QM setup are (Hight Risk) because this QM involves two trend .

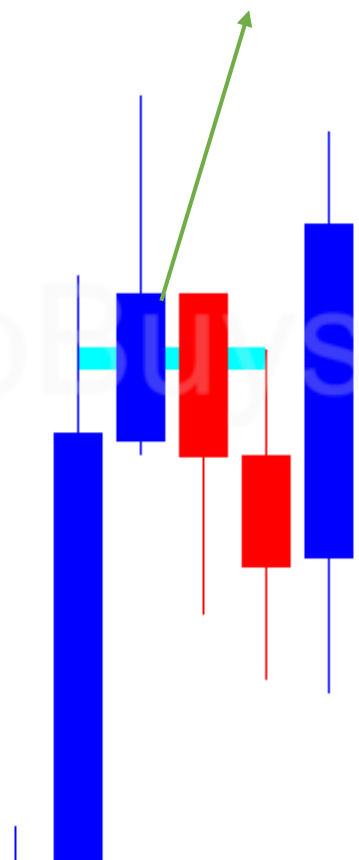

- Quasimodo Reversal Sell

MANIPULATION

- Manipulation belongs to the reversal category.
- This setup will be more (Hight Risk) than QMR.
- Manipulation will often hide inside body Engulfing.
 - Engulfing > Double Maru > RBR/DBD
 - Engulfing > RBR/DBD

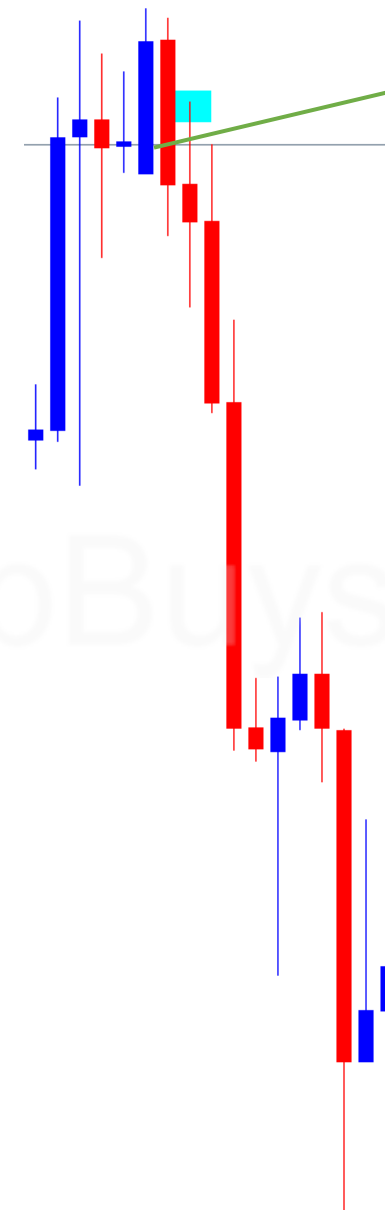

- **Manipulation Sell**

HOW TO USE MULTI TIME FRAME

- Multi time frame is very important , because it will help us avoid being manipulated by BIG TRADER.
- Have two ways to use for multi time frame.

* From (HTF) to (LTF)

* Find a confirmation before looking for setup

CONFIRMATION	D1	H4	H1	M30	M15	M5
↓	↓	↓	↓	↓	↓	↓
SETUP	H4	H1	M30	M15	M5	M1
	H1	M30	M15	M5	M1	

* From (LTF) to (HTF)

* Find a setup before looking for confirmation

CONFIRMATION	M15	M30	H1	H4	D1	
↑	↑	↑	↑	↑	↑	
SETUP	M5	M15	M30	H1	H4	D1
	M1	M5	M15	M30	H1	H4

ENTRY USING 5SOP (LOW RISK)

➤ Why we need 5SOP ?

➤ What is 5SOP?

1) Zone

- Zone required because in SNR Zone will have a big order.
- How to know in SNR Zone have a big order? That's why we need (SOP 2 Rejection).

2) Rejection

- Rejection required so that we know in SNR Zone have a big order.
- Can we entry after rejection?
- After rejection we still can't Entry. We have to wait (SOP 3 Confirmation).

ENTRY USING 5SOP (LOW RISK)

3) Confirmation

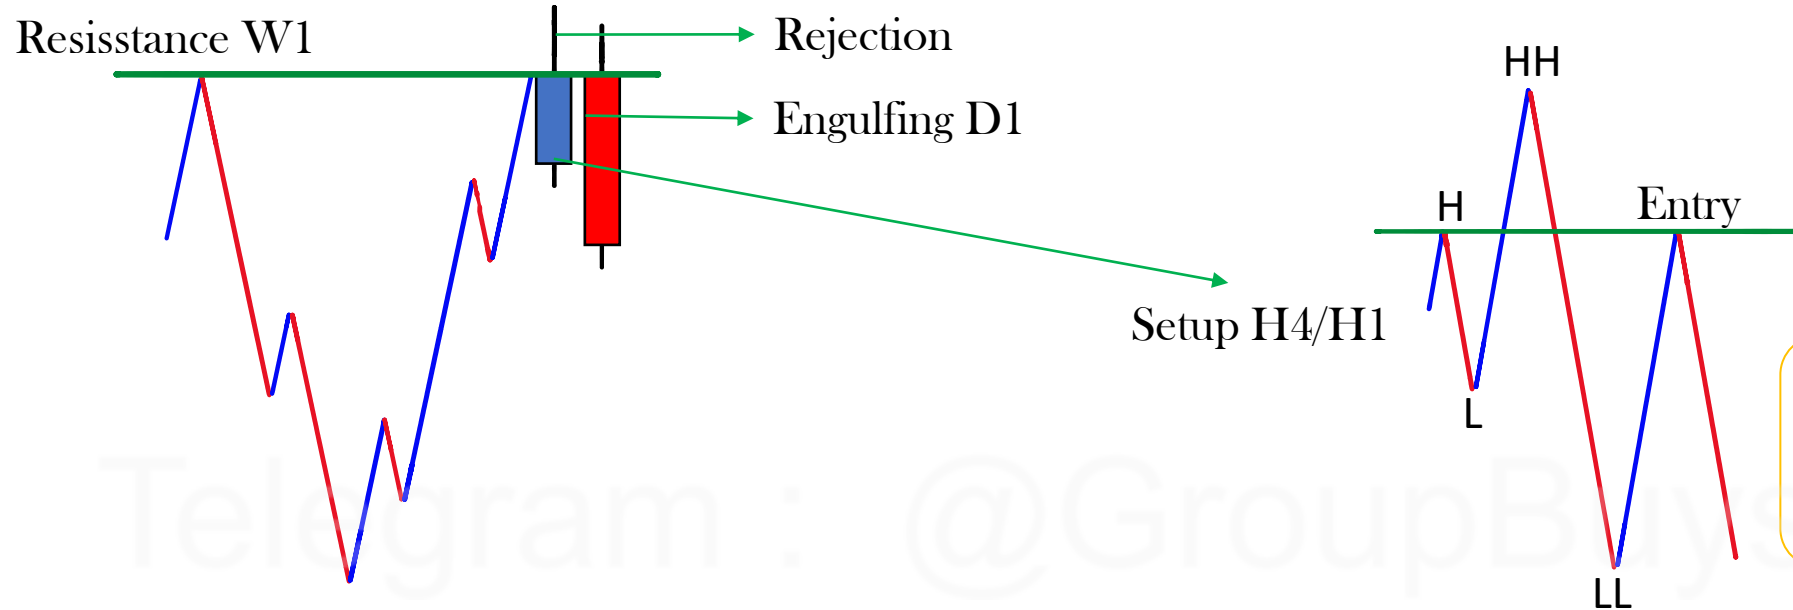

- Candle confirmation required so we know that Buyer, Seller has entered the position like (Bullish Engulfing) or (Bearish Engulfing).
- After find out the confirmation we will play Multi Time Frame to find the Setup.

4) Setup

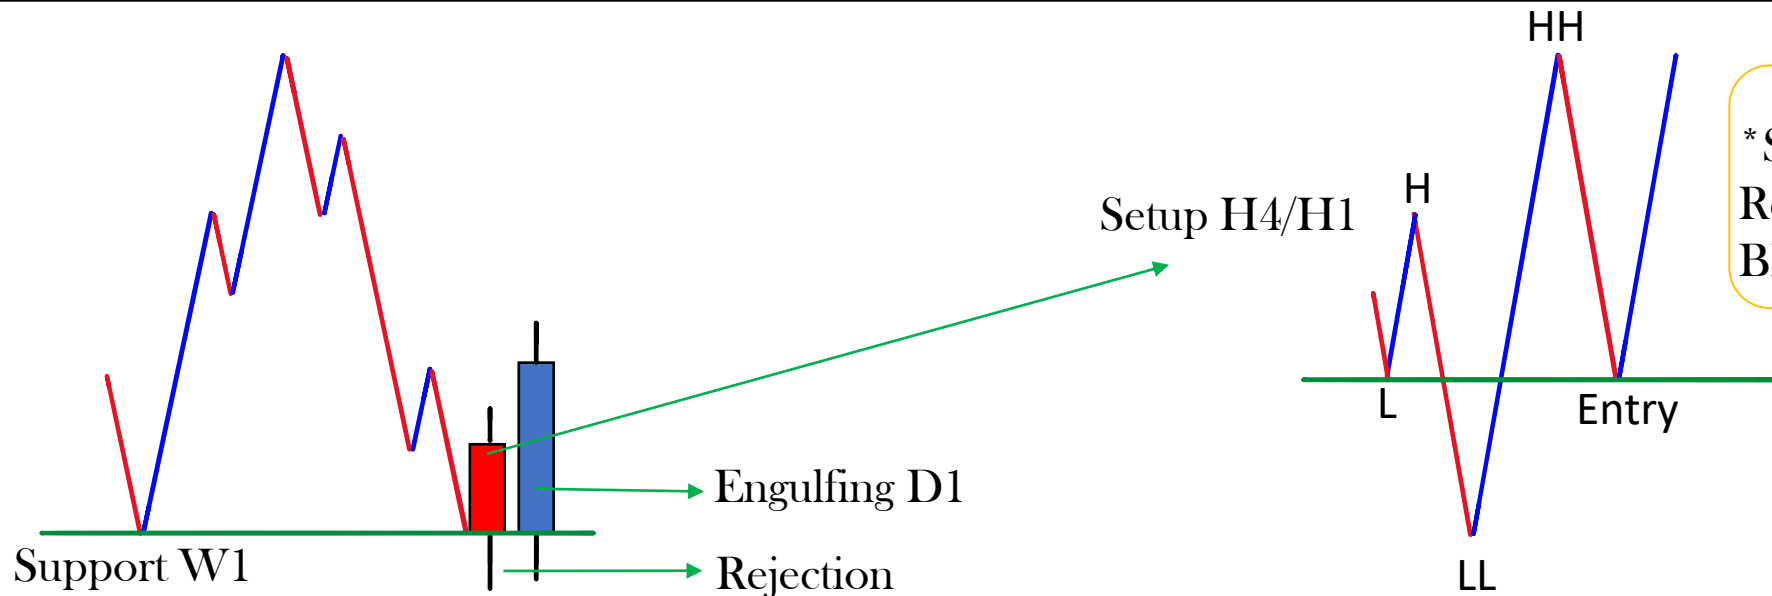

- The price usually will Reversal setup like (Qmr, Manipulation, Blindsport).
- Setup required so that we know where we want put the SL, TP, PO .

5) Entry

Reversal Setup + 5SOP

* Setup which always appears
Reversal, QMR, Manipulation,
Blindsport

* Setup which always appears

Breakout Zone + 5SOP

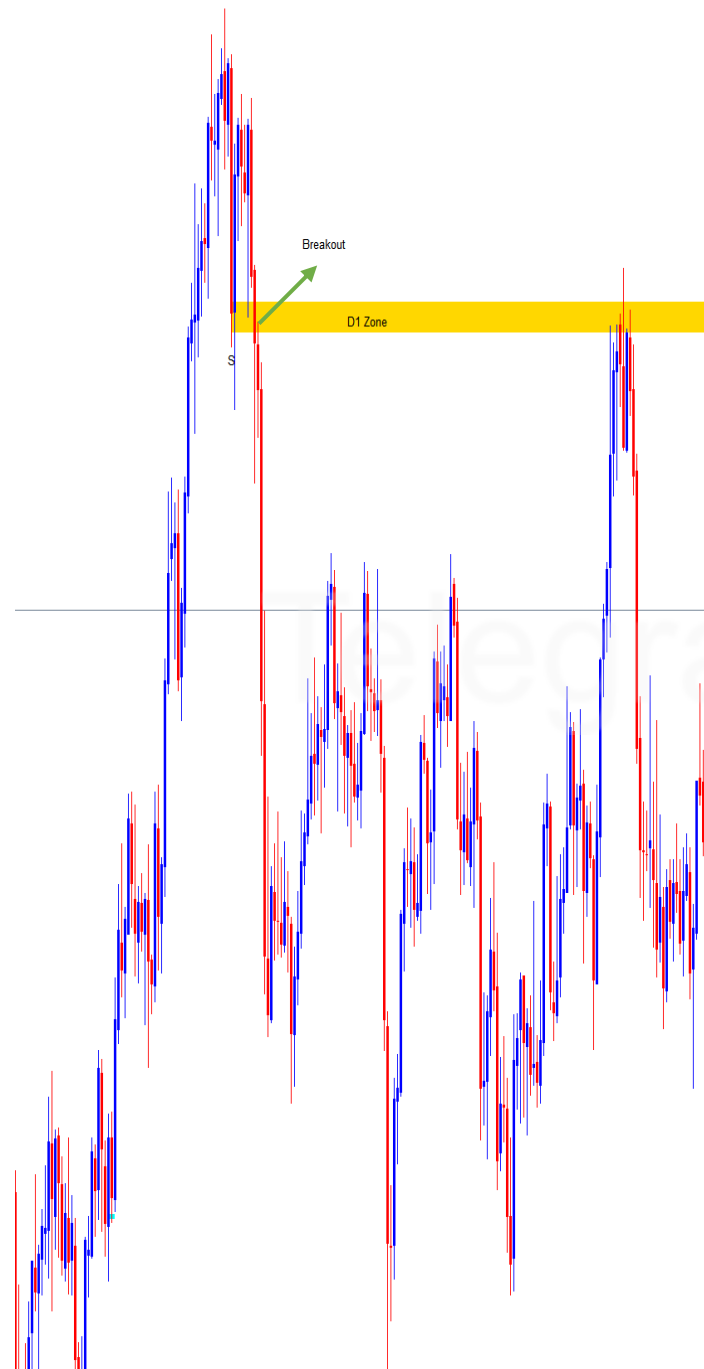

- What means breakout zone? It's means Support/Resistance zone is already breakout because in that zone don't have the order.
- When Support/Resistance zone is already breakout, that zone will get a new order. When have a new order, we will looking for chance to entry.
- And how we want to know in that zone have a new order?
- When the price has entered the zone we will find 5SOP.

BREAKOUT ZONE 1 SELL

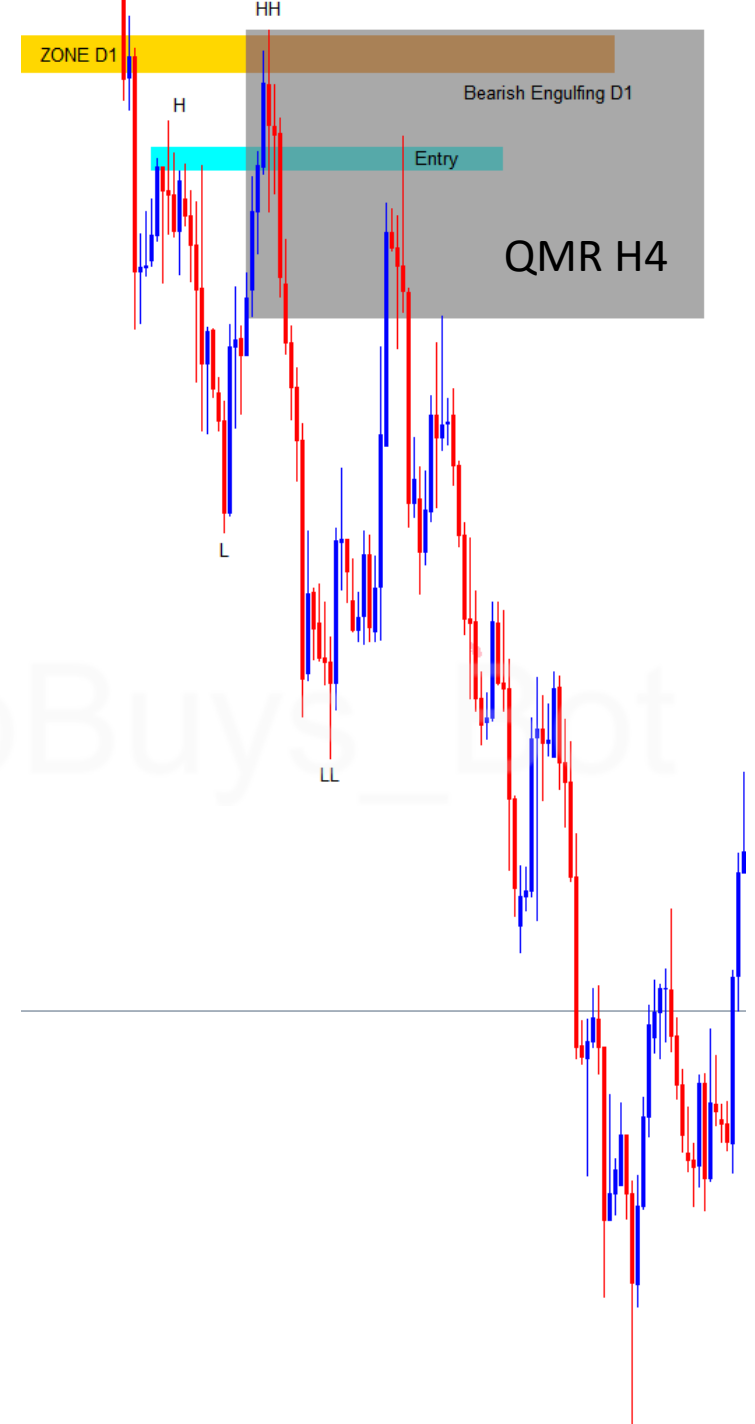

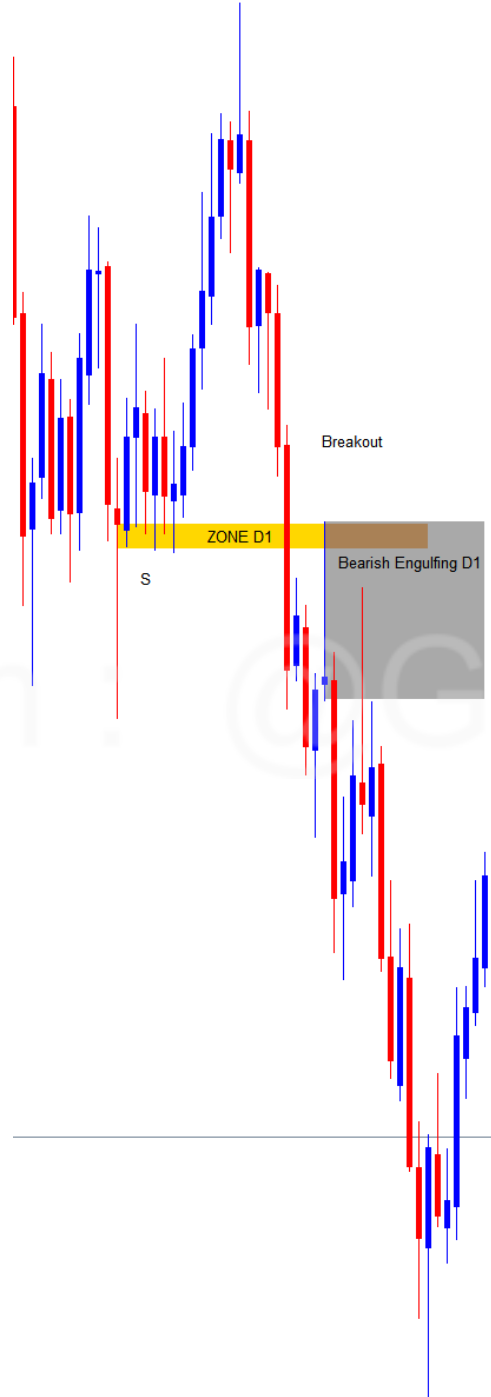

BREAKOUT ZONE 2 SELL

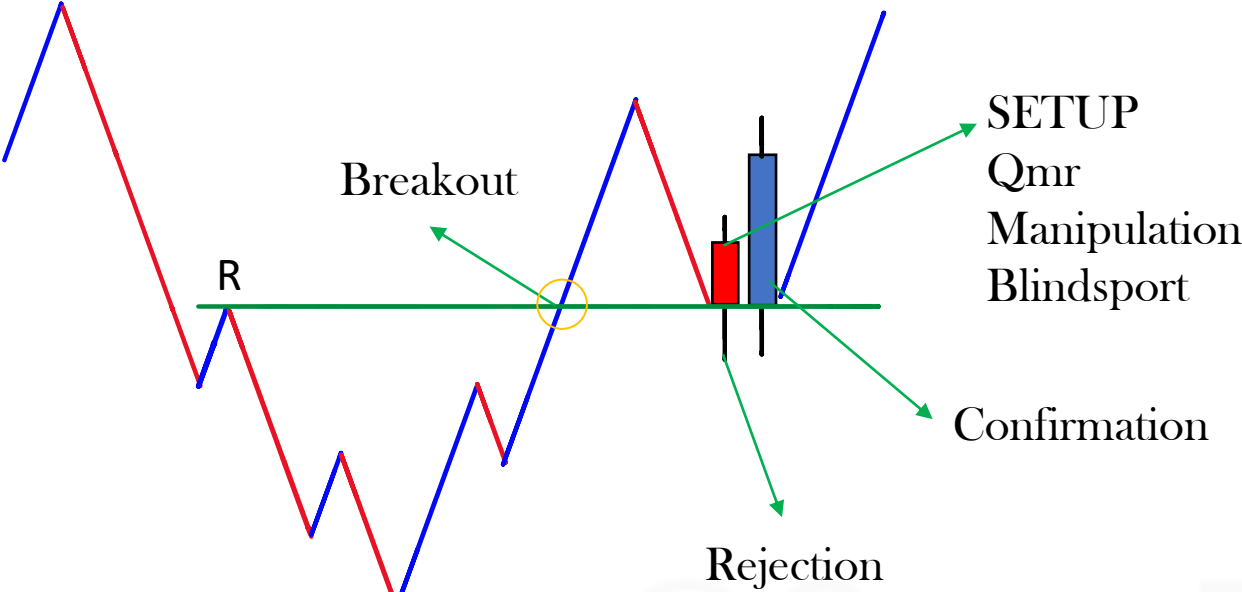

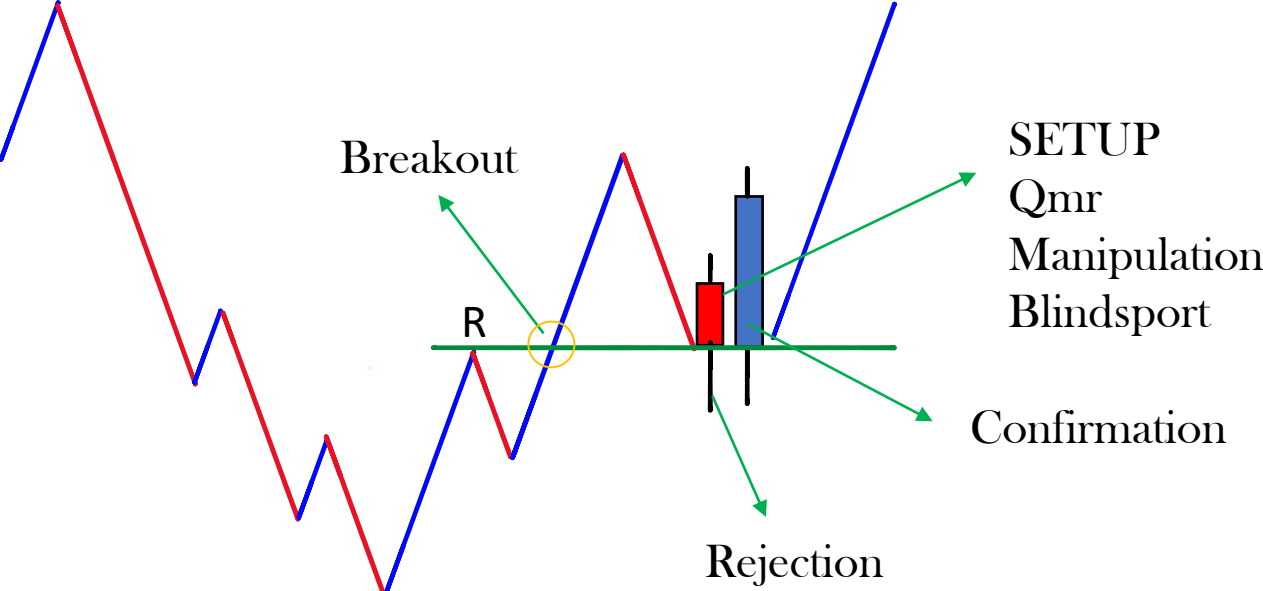

Telegram : @GroupBuys_Bot

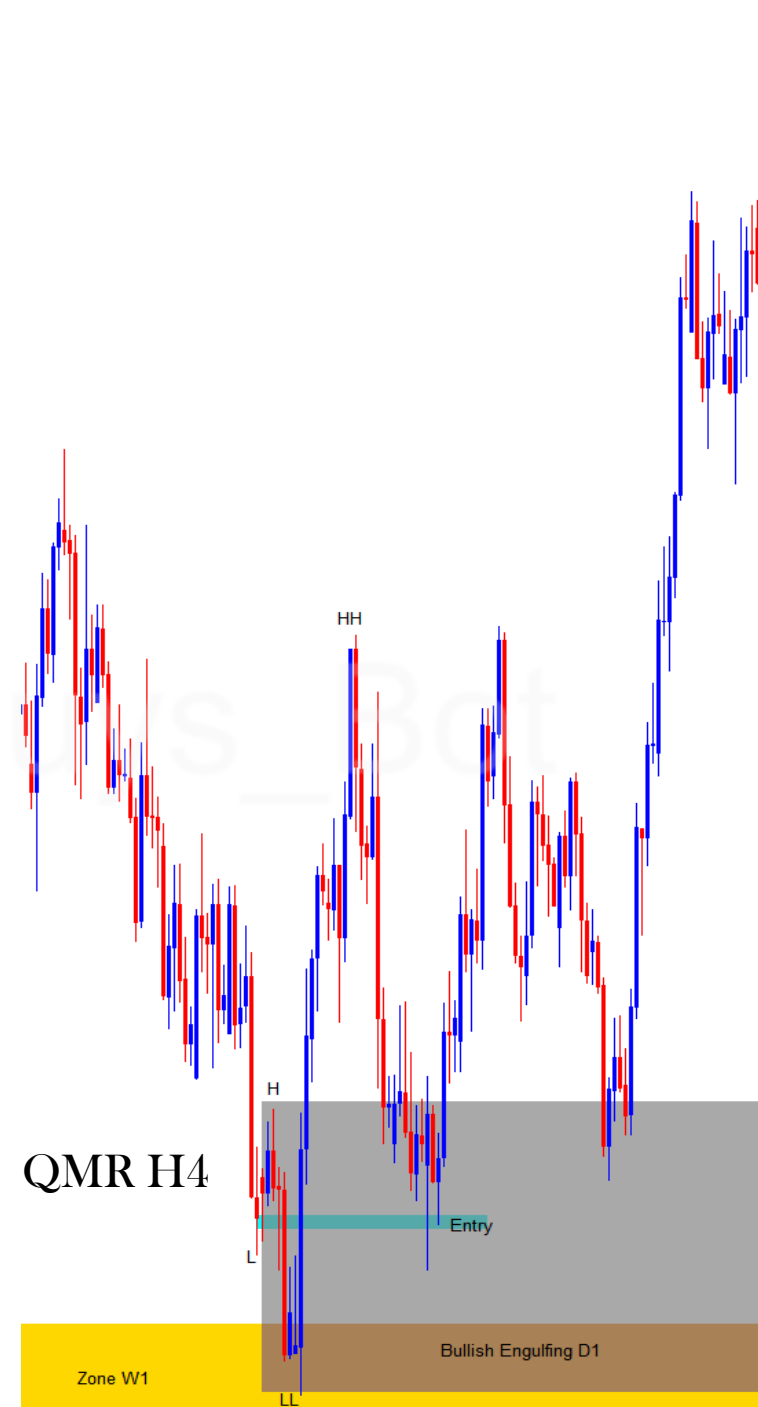

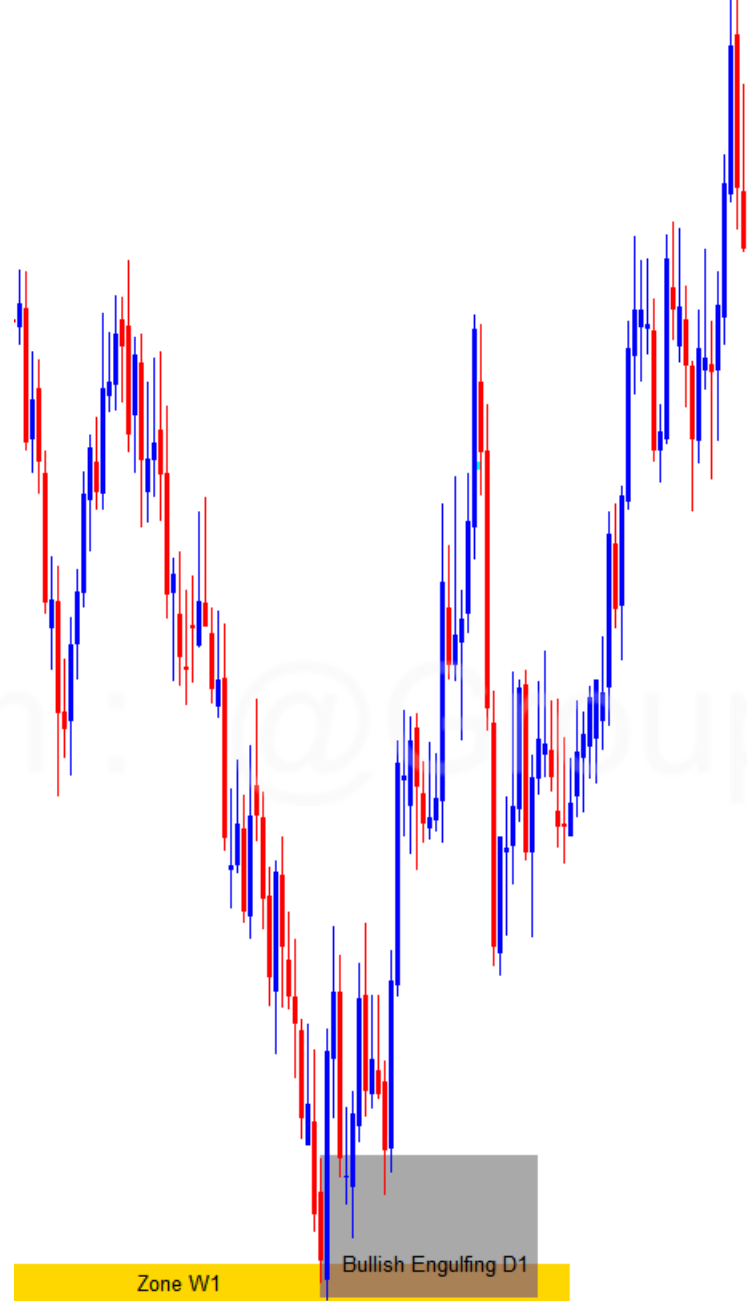

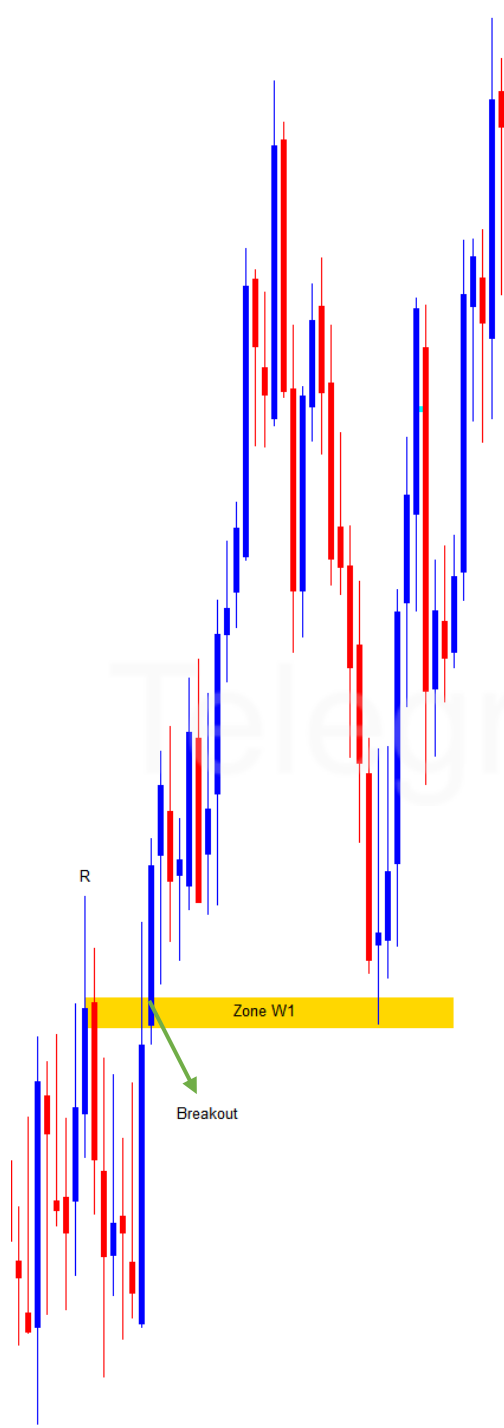

BREAKOUT ZONE 1 BUY

BREAKOUT ZONE 2 BUY

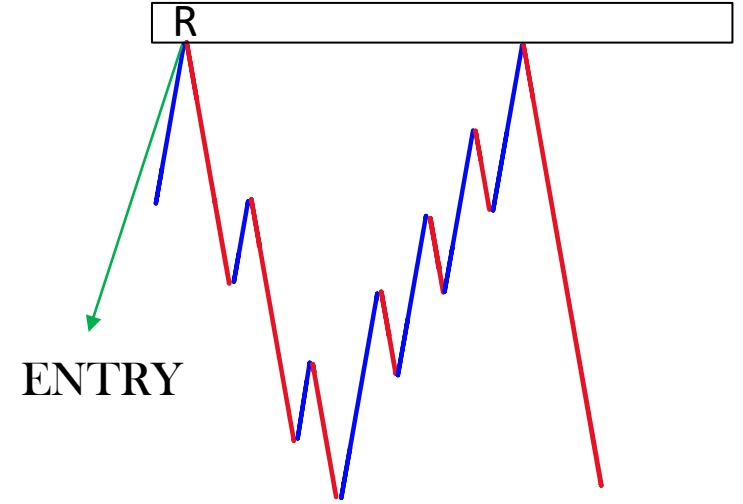

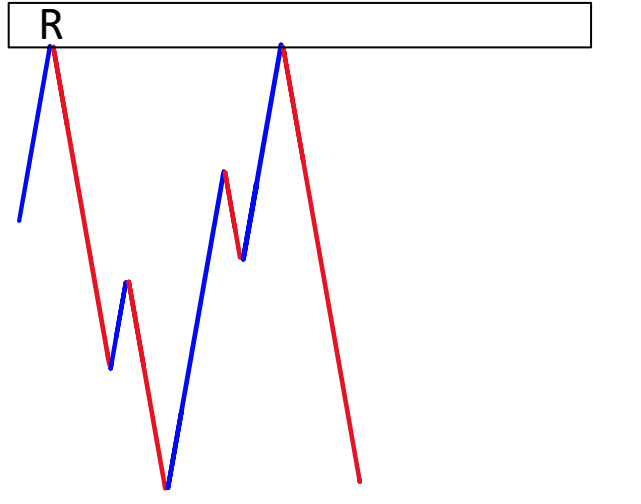

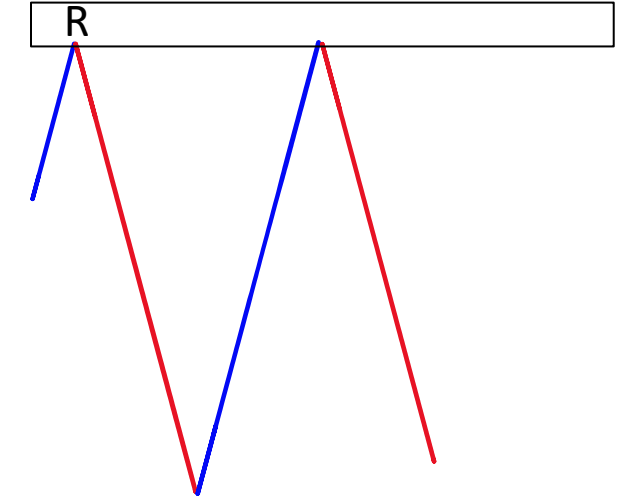

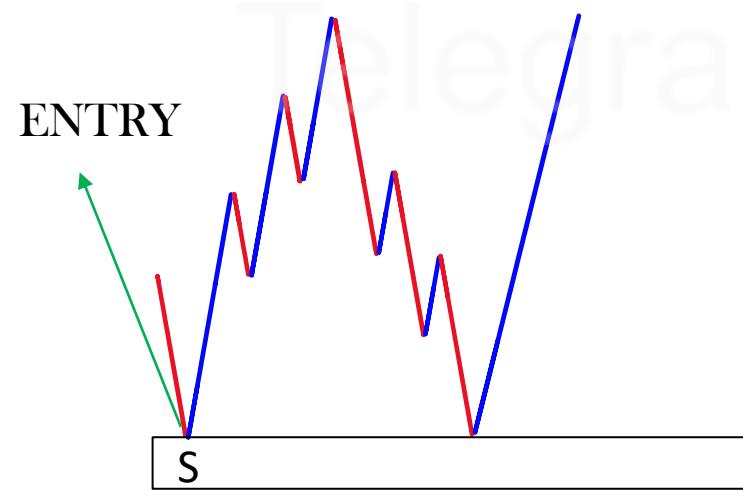

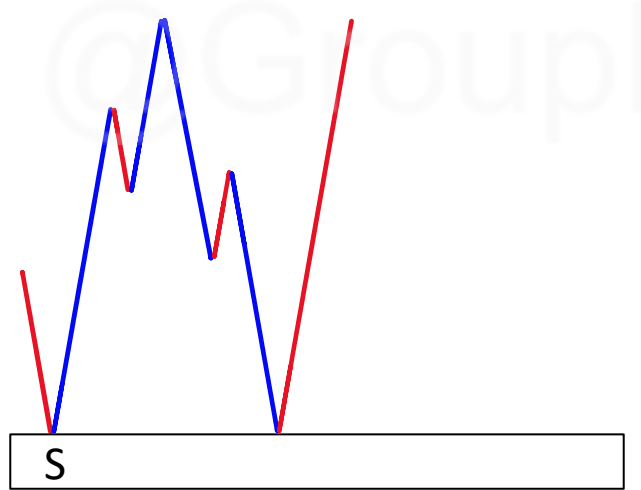

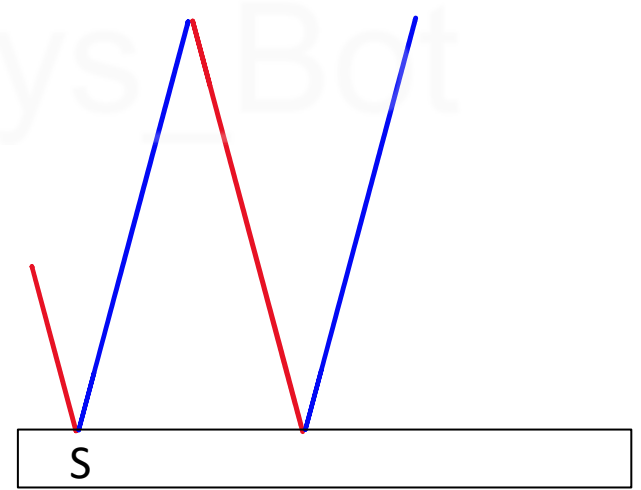

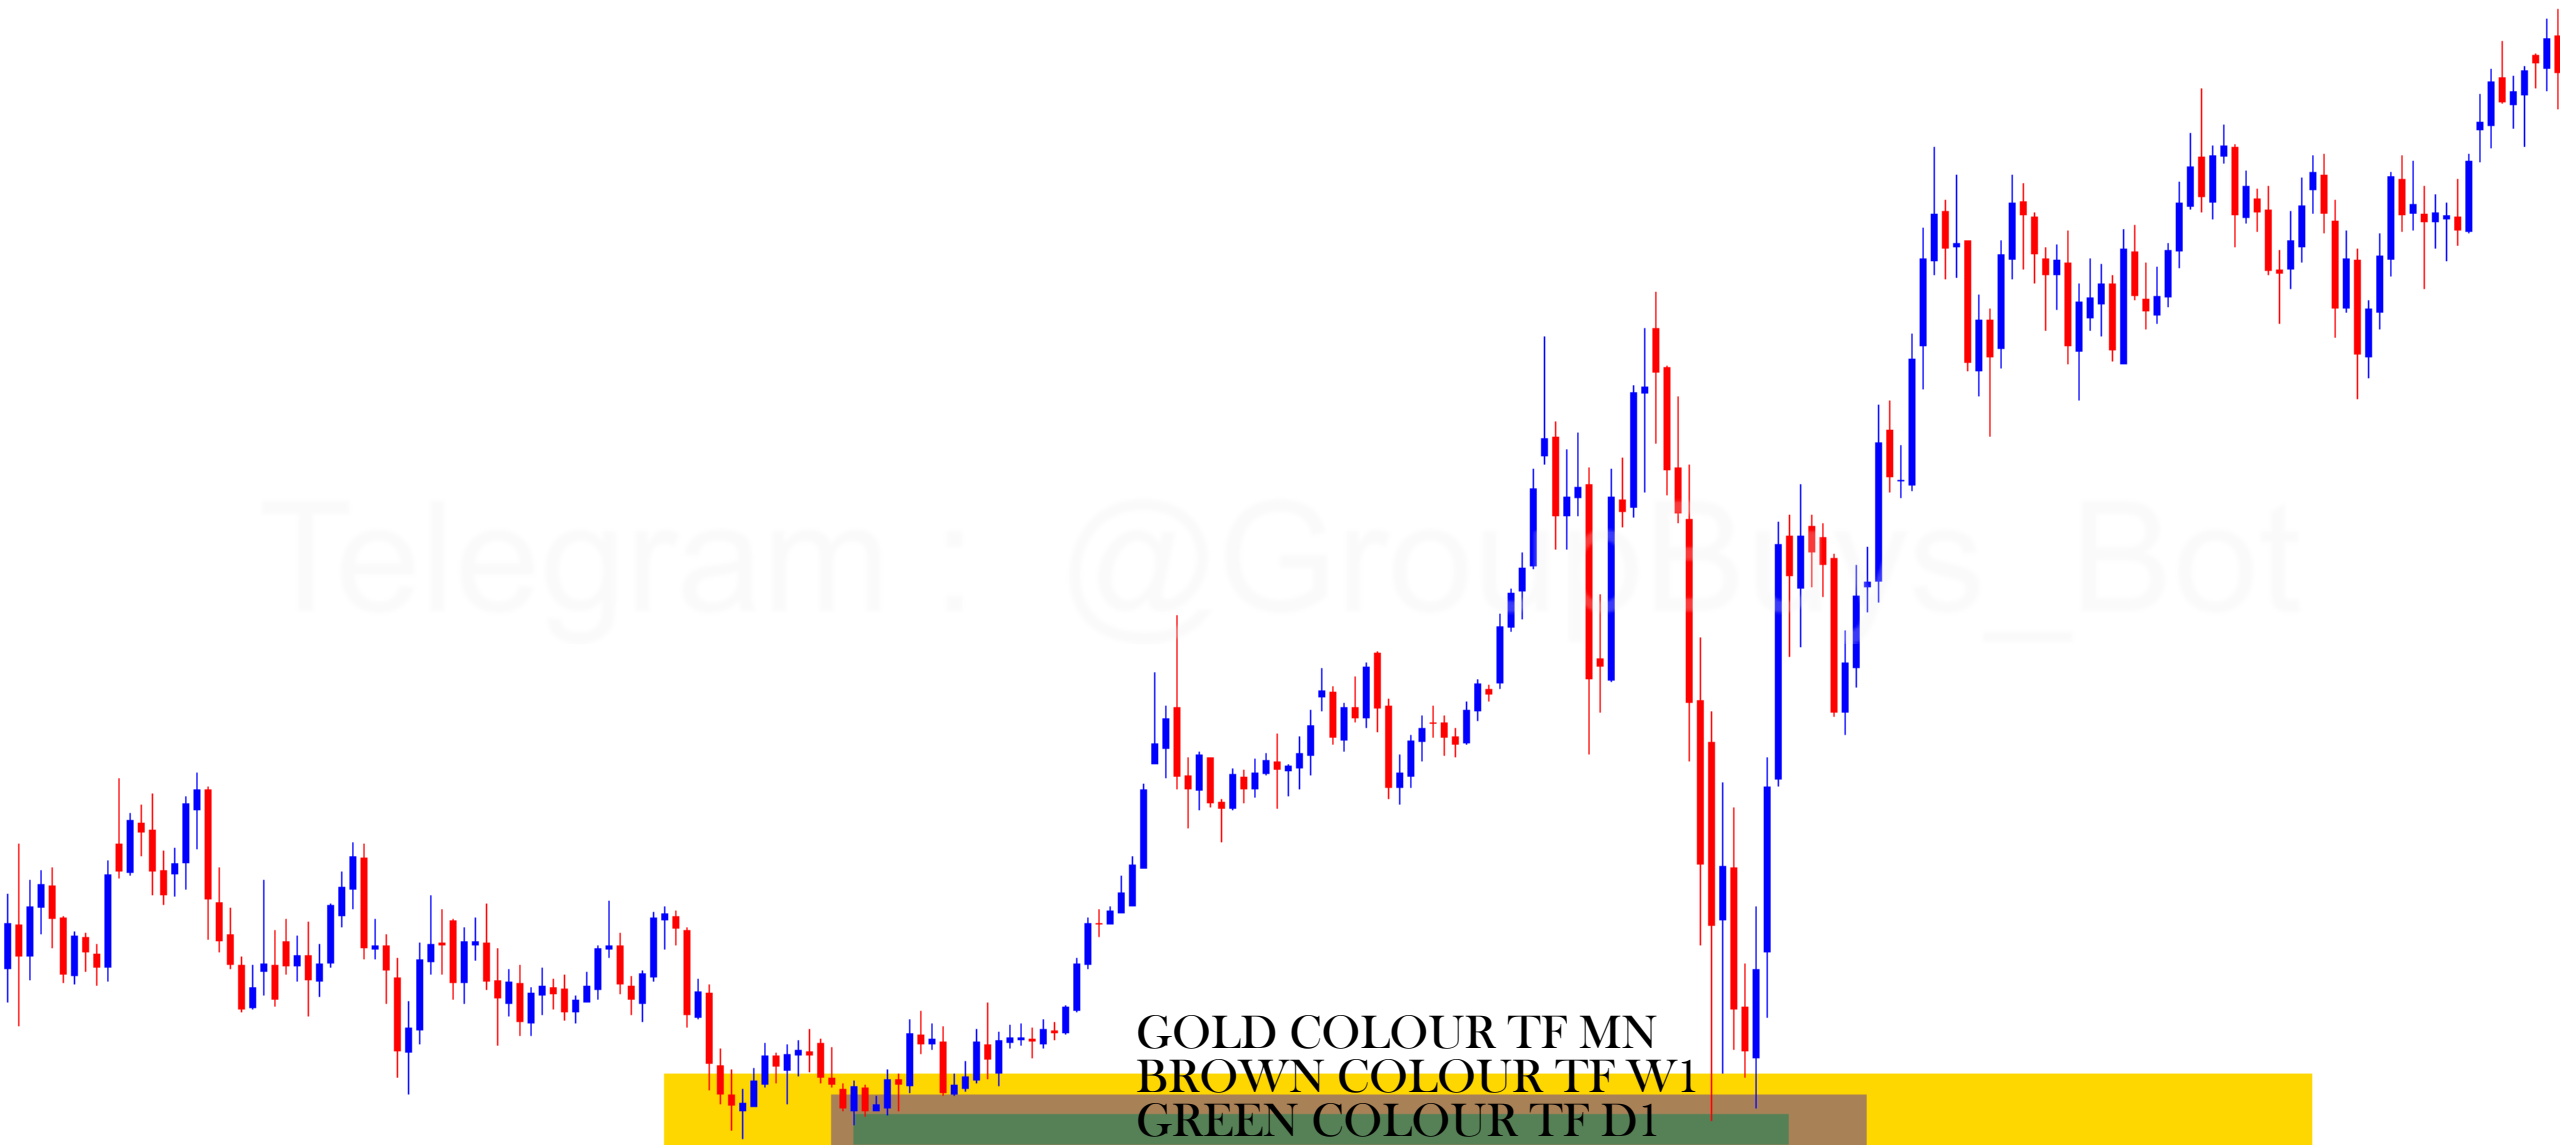

ENTRY USING SNR(HIGHT RISK)

- This entry was hight risk because don't use (5SOP).
- This entry can use only for big Time Frame (MN/W1/D1) .
- This setup can't use under Time Frame D1 .
- This entry just need to find the strongest (SNR).
- This entry must be in the Body SNR and Stoploss at the up/bottom Shadow SNR.

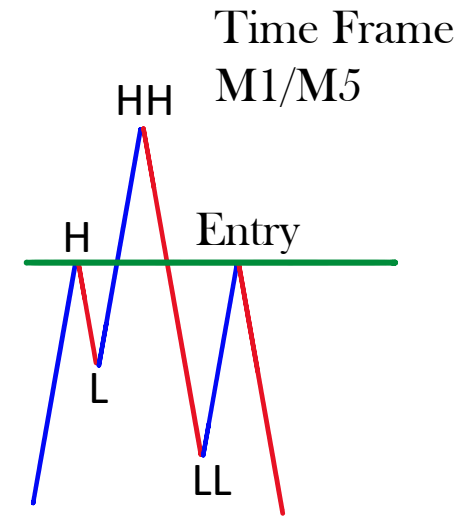

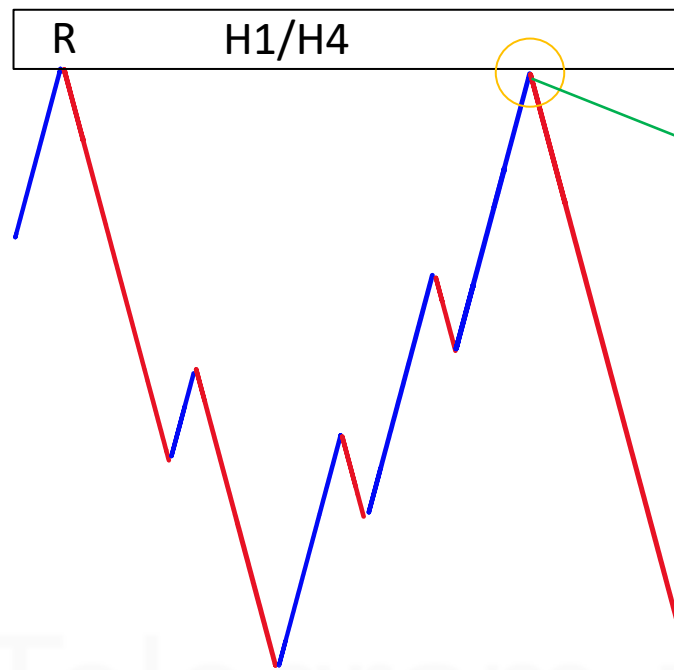

DAILY	WEEKLY	MONTHLY
		
		
<p>Time Frame (D1) mark the Zone (SNR). After marked the Zone, can Entry at the Support or Resistance</p>	<p>After changed the TF (W1) mark the Zone (SNR) W1, after marked the Zone come down to TF (D1)</p>	<p>Started from Time Frame (MN) and mark the zone (SNR), after marked the zone (SNR) come down to TF (W1) .</p>

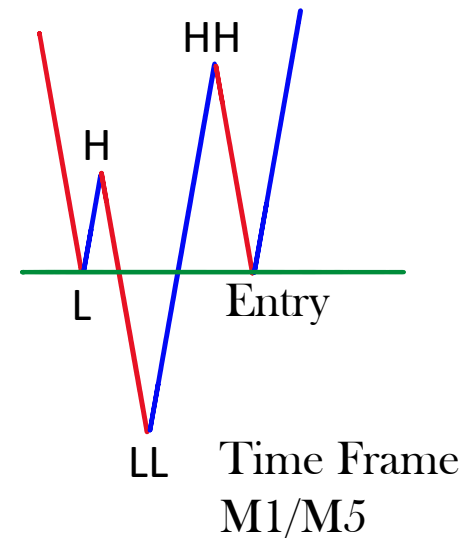

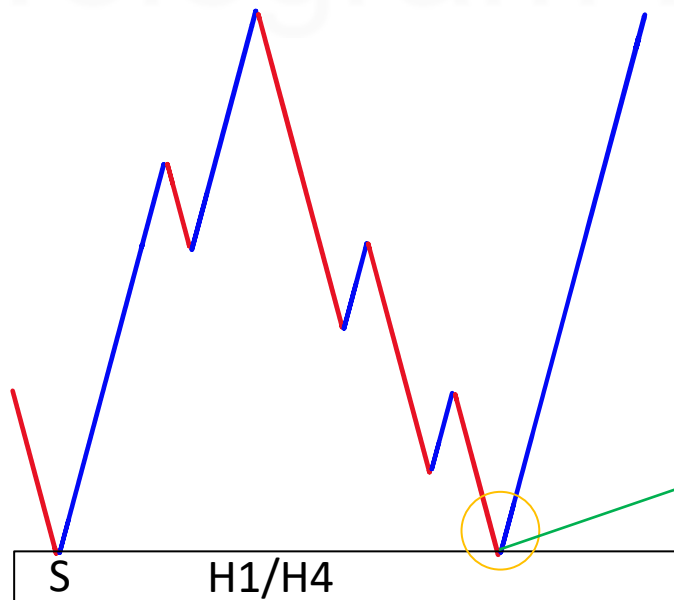

SCALPING GOLD

- SNR Mini + QM Reversal .
- For scalping usually the price must be in the Range sideways.
- We will looking for the SNR zone at the Time Frame (H1) and (H4) only.
- For scalping,we don't need the direction at the big Time frame. Enough of the SNR (H1) and (H4) .
- The zone at (H1) and (H4) should have 2nd Movement. When the price has entered the zone, we will go to the Time Frame (M1) to looking for QMR/Manipulation.
- This scalping usually will give us take profit approximately 20/50/100 Pips .
