-----------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Trade Setup		Trade Management	
Always		Stop Loss	
	QQE > 50 Line and sloping up		Few pips below lower white line (lower Dragon line) or nearest support (minimum 40 pips)
	CCI > Zero Line and sloping up		
	Better if midline of CCI is green		
	Better if NVO indicates increase in volume		
	Better if slope of Tunnel Dragon (or three 34MAs) is steeper. Avoid horizontal range periods.		
	Direction of angle: Long - 1 to 2 O'clock. Short - 4 to 5 O'clock. Avoid 3 O'clock range.		
	Better if price > 89 EMA	Take Profit	
	Look for divergence on QQE or CCI		1. Use Pivot Point Zones (PPZ)
Trade Trigger			2. Use Resistance
	1. See LOW in the price		3. Use Round Numbers
	2. Then price makes HIGHER LOWs (HL)		4. Put TP below lower white line (lower Dragon line). When price touches indicator again, close position.
	3. After HIGHER LOW , look for candle above upper white line (upper Dragon line) and wait until it closes		
	4. Put buy stop order a few pips above high of that candle		5. Use Trailing Stop (example - 40 pips)
