

How To See Where Traders Place Their Stop Loss and Use them to Make Profit?

We find ourselves spending more and more time focusing on analyzing market structure, while the price has gone in exactly the opposite direction of what we expected.

But the more we work with other traders trying to help them improve their trading, the more we realize just how much our successful trades rely on correctly reading market structure, identifying changes in the market's behavior and knowing just where the majority of the market players are massing their Stop Loss.

Now, we want to propose an idea that perhaps you have never considered before.

Since it seems that almost everyone who is trying to invest in the markets is losing their money to the small percentage of those who make money in this markets, may be now we should forget about all the analysis, complicated indicators and approach investing from a completely new perspective

The most important part of the market that nobody talks about is the highest LOW or lowest HIGH. This is the Point that matters to the people controlling the market !!!

Financial Capacity

Financial Capacity has to do with how much money someone has to trade with.

We can break the market up into four different categories

Weak – Limited Capital

This kind of traders have very little money, they are Emotional, Undisciplined and Risk-takers

Minor – Minor Capital

Small amount of money, Inexperienced, Over-Leveraged

Intermediate – Sufficient Capital

Professionals and successful traders. Very Experienced

Strong – Excess Capital

Extremely rich traders, Banks, institutions. They are Unemotional, Precise, Discipline,

Risk -Averse

Strong vs. Weak

Excess Capital vs. Limited Capital

BIAS-Logic

- ❖ 1-Highest Low, weak traders are stopped out
- ❖ 2-Minor traders are stopped out
- ❖ 3-Intermediate traders are stopped out
- ❖ 4- Strong traders are out of the market and Trend is Over

BIAS Expert Advisor Trade Method

BIAS Expert Advisor does adaptively try to tune to current market conditions. When price movement is very big and markets are volatile, it will catch such movements and entries at early trend. Also, take profit levels will be higher, allowing to capture big profits on each trade. If the market is quiet, however, robot will adapt and try to capture only small moves, with small profits.

Inputs:

BIAS Expert Advisor has a number of parameters to tweak its operation, but Money Management is half of the success for every system and we added a very powerful option – BINARY Money Management.

Some of the parameters do influence aggressiveness of the robot. When aggressiveness increase, potential for profit increases, yet the risk increases as well. On the aggressive settings, you may get extraordinary profits quickly, but loose big part of your account in long term.

A System For Using The BIAS Strategy To Trade The Forex Market with more power

BINARY Money Management

BIAS Expert Advisor may start trading with lot sizes specified by you, or calculate the lot sizes According to the following powerful Binary Money Management.

The Strategy of Binary MM seeks to achieve a series of just TWO Winning trades in a row and by those two wins, make up for all previous losses in the series and also make a profit!

Sounds interesting, isn't it?

Let's explain.

The BIAS Expert Advisor makes trades with fixed amount of risk per trade, and assuming that we are losing those trades, the BIAS EA simply tracks the total amount of losses until the first win. After the first win, BIAS EA then places another trade with the amount equivalent to the previous losses in the series. If it is a win, we have made up all our losses and made a profit. If it is a losing trade, the EA continues to place trades for the higher amount until he has another win, then again the EA adds up our previous losses and places trade for an amount equivalent to the previous losses in that series.

The power of Binary MM strategy demonstrates that in order to show a profit from any series of trades two consecutive winning trades should be achieved.

Let's see the statistical probability of obtaining the same outcome twice in a row of any trade that has only two possible outcomes (win or lose), and equal probability for both. This would describe any number of "events", such as flipping a coin, or betting if a market is going to go up or down by 30 pips.

The formula used is defined by this equation:

$$\%Probability = ((\text{Winning Combinations} / \text{Possible Combinations}) / \text{Number of Trades}) \times 100$$

Binary Money Management								
Chances of Achieving Two Consecutive Winning Trades								
# of Trades	5	6	7	8	9	10	11	12
# of Possible Combinations	32	64	128	256	512	1024	2048	4096
# of Winning Combinations	27	81	243	729	2187	6561	19683	59049
Statistical Chance of 2 Wins	16.88%	21.09%	27.12%	35.60%	47.46%	64.07%	87.37%	120.14%

As you can see, by the time we get to twelve trades, the statistical probability of having two consecutive wins is over 100%! Now of course, one of the frustrating things about real life is that it doesn't always listen to statistical probability. So don't think it is impossible for a series to go past twelve trades, but it is not realistic and in order to protect profits from the possibility of a long series that do not close the run, the BIAS EA has parameter to set Maximum Lots.

Even Greater Power

With Binary MM we make profits, when the chance is 50/50 for winning and losing trades, but our chances are much greater. What happens if we include the BIAS Logic Indicator for determining the current short term trend direction and taking trades in that direction?

You may find better Strategy to determine trend direction, but BIAS Logic has proven itself to be extremely effective and gives winning trades about 60-65% of the time - which is much more than sufficient for good success. Now together with Binary MM we have the most powerful Expert Advisor.

If the strategy make sense and you want to feel the money from such profits in your pockets, you need to do yourself a favor and download the **BIAS- Expert Advisor**: www.forex-consult.com

The Strategy is a trend following and work in all currency crosses and every time frame.
